1.0 EXECUTIVE SUMMARY

On behalf of the Transportation Agency of Monterey County (TAMC), Kleinfelder West, Inc. (Kleinfelder) performed this Preliminary Corridor Environmental Assessment for on an approximately 15.2 mile segment of the Monterey Branch Line (MBL) of the Union Pacific Railroad (UPRR) from mile post (MP) 110.8 in the City of Castroville to MP 126.0 in the City of Monterey, California (Figures 1-2E). This report includes an update and expansion to a previous Phase II ESA prepared by Kleinfelder in 2003 for the approximately 12.5 mile segment of the MBL from MP 110.8 to MP 123.3. Kleinfelder understands that TAMC has acquired the 12.5 mile segment addressed in the Phase II ESA and intends to acquire and restore the remaining 2.5 mile segment from MP 123.3 to MP 126.0. The purpose of this assessment is to identify potential environmental conditions related to chemical releases or spills to soil or groundwater in support of the Environmental Impact Report, being prepared to assess potential impacts related to the restoration of the Monterey Branch Line for the entire 15.2 mile proposed segment from Castroville to Monterey.

Kleinfelder focused on updating information within the Phase II ESA for 12.5 mile segment and a more thorough review and ground reconnaissance of the 2.5 mile segment.

Kleinfelder retained Environmental Data Resources (EDR) to perform a search of regulatory databases for sites with the potential to impact soil or groundwater on or beneath the site. The study area is 1/8-mile on either side of the center of track alignment. Kleinfelder reviewed the EDR report to assess the potential of the sites listed in the database to impact the TAMC project, based on their proximity to the existing railroad tracks and information related to the type and severity of documented releases.

The following environmental conditions were identified with the potential to impact the proposed restoration of the Monterey Branch Line:

Copyright 2010 Kleinfelder

1.1 ON SITE SOURCES

1.1.1 Hydrocarbon and Metal Releases from Previous Rail Operations

Leakage from running engines can over time release a significant amount of oil within the ballast material, particularly on sidings where engines idle or are parked. This waste oil may also contain heavy metals such as cadmium, chromium, copper, nickel, and lead. Over time these heavy hydrocarbons and metals may be driven by rainfall into the upper soil surface and shallow groundwater.

1.1.2 Treated Rail Ties

Rail ties are commonly treated with creosote to prevent degredation. Less commonly, and in the past, other methods of treatment included the application of arsenic-based preservatives, copper azole, and pentachlorophenol. DTSC has determined that treated wood waste (TWW) may cause an impact to soil and groundwater if not managed properly. As a result, in-place treated rail ties may impact shallow soil and groundwater from exposure to rainfall.

1.1.3 Herbicides

FRA regulations require vegetation control within 15 feet of the tracks for fire suppression. Vegetative control is commonly conducted by herbicide application using rail mounted equipment that sprays herbicides within the prescribed width. As a result, repeated application of herbicides may have resulted in an impact to soil and groundwater resources within the right-of-way.

1.2 OFF-SITE SOURCES

1.2.1 Dole Processing Plant along the Alignment

The Dole Processing Plant is located adjacent to the alignment (north of Marina). Although no spills, leaks, or USTs were reported by EDR, several areas of dumping were observed during the site reconnaissance. One open, rusty 55-gallon drum was observed along the eastern side of the alignment. The contents of the drum are unknown, however a tree was observed to be growing through the drum, indicating that vegetation in the area is not likely stressed due to the former contents of the drum.

Copyright 2010 Kleinfelder

1.2.2 Potential Disposal Areas behind Auto Shops

Numerous auto repair, tire shops, car dealers, and commercial and industrial businesses were observed within fifty feet of the alignment in the areas of Sand City / Seaside and Monterey. Historically, auto repair facilities use and dispose of hazardous substances related to their operations. Based on site observations, potential disposal and dumping behind the businesses, adjacent to the rail line may pose a concern to shallow soil within the right of way.

1.2.3 Petroleum Hydrocarbons in Soils and Groundwater at former Bulk Terminal Area

According to database findings and historical research a crude oil and refined petroleum bulk terminal previously operated immediately north of the alignment within the City of Monterey at approximately Section 705+00 to 714+00. The tank farm and terminal were constructed in 1926 and operated until 1976. This tank farm formerly included six 80,000-barrel (3,360,000-gallon) crude oil and light crude oil tanks, one 2,960,000-gallon gasoline tank, one 315,000 gallon crude balance tank, and an oil warehouse/loading area. The tanks were removed from 1983 through 1996. According to information reviewed on the State Water Resources Control Board Geotracker website, product was applied to the sand dune area to stabilize the sand and prevent corrosion of the bottom of the tanks. This property is currently monitored semi-annually and is listed on the SLIC database do to the presence of petroleum hydrocarbons within groundwater. Kleinfelder reviewed the most recent semi-annual report, prepared by SAIC and dated July 15, 2009, which indicated that a plume of petroleum-affected groundwater exists beneath the railroad right of way and across Del Monte Avenue to the south. It is possible that residual petroleum hydrocarbons are also present within shallow soils beneath the proposed rail line.

1.2.4 Lead-based Paints on Existing Rail Structures

According to the Bridge Strategy Report for Monterey Peninsula Fixed Guideway Corridor Study report, by Parsons, dated July 2005, three types of bridges currently exist along the proposed alignment. Steel structures, such as the Salinas River Bridge, as well as painted components of the concrete bridges or timber trestles potentially have been painted using lead-containing or lead-based paints. Over time and exposure

Copyright 2010 Kleinfelder

to weather, these paints may degrade and fall onto soil. It is possible that elevated lead concentrations may remain in soils near these structures.

1.2.5 Buried Utilities along the Alignment

Based on site observations and discussions with Cal-American Water, California Water, and the Marina Coast Water District, various water-related utility chases (piping, storm water drains) intersect the proposed alignment. Locations should be verified prior to any subsurface construction within the proposed alignment.

Pacific Gas & Electric maintains subsurface electrical and natural gas pipelines alongside the segment of alignment that extends from Marina to Monterey. The approximate location of the natural gas pipeline is identified by PG&E markers along the alignment; however subsurface electrical corridors are not identified. Locations should be verified prior to subsurface construction within the proposed alignment.

1.2.6 Flange Lubricators

Although not observed during the site reconnaissance, many railroads use automatic flange lubricators to prevent flange and rail wear at curves. The lubricators commonly consist of a metal box adjacent to the tracks filled with grease, and a pump system that extrudes the grease as the rail cars travel over it. Over time, a significant amount of grease can be released to the soil, particularly if the lubricators are not maintained properly.

2.0 INTRODUCTION

2.1 PURPOSE

On behalf of the Transportation Agency of Monterey County (TAMC), Kleinfelder West, Inc. (Kleinfelder) performed this Preliminary Corridor Environmental Assessment for the approximately 15.2 mile segment of the Monterey Branch Line (MBL) of the Union Pacific Railroad (UPRR) from mile post (MP) 110.8 to MP 126.0. This segment stretches from the City of Castroville to the City of Monterey in Monterey County, California (Figures 1, 2A-2E).

This report includes an update and expansion to a previous Phase II ESA prepared by Kleinfelder in 2003 for the approximately 12.5 mile segment of the MBL from MP 110.8 to MP 123.3. Kleinfelder understands that TAMC has acquired the 12.5 mile segment addressed in the Phase II ESA and intends to acquire and restore the remaining 2.5 mile segment from MP 123.3 to MP 126.0. The purpose of this assessment is to identify potential environmental conditions related to chemical releases or spills to soil or groundwater in support of the Environmental Impact Report being prepared to assess potential impacts related to the restoration of the Monterey Branch Line for the entire 15.2 mile proposed segment from Castroville to Monterey.

Kleinfelder focused on updating information within the Phase II ESA for 12.5 mile segment and a more thorough review and walking tour of the 2.5 mile segment. The scope of work is intended to assess the environmental conditions along the rail alignment to identify potential areas of soil and groundwater that may have been affected by hazardous materials during past or present land uses.

The purpose of this report is to identify, to the extent feasible pursuant to the scope of work defined in our proposal, and the limitations discussed in this report, potential environmental conditions that may cause an impact to the site, and to provide recommendations for further assessments.

Kleinfelder's review focused on current and past land uses within the railroad right-of-way.

Copyright 2010 Kleinfelder

2.2 DETAILED SCOPE-OF-SERVICES

The following sections describe Kleinfelder's work scope:

Section 2, **Introduction,** includes a discussion of the purpose/reason for performing the Preliminary Corridor Environmental Assessment, significant assumptions (e.g., property boundaries if not marked in the field), limitations, exceptions, and special terms and conditions (e.g., contractual), and user reliance parameters.

Section 3, **Study Area Setting**, is a compilation of information concerning the study area's location, legal description (where available), and current and proposed use of the study area. Also included is a description of the physical setting of the study area, including readily available information on topography, geology, and hydrogeology.

Section 4, **History of the Study Area**, summarizes the history of land use along the corridor and adjoining properties that have potential to adversely affect the proposed alignment. The history was developed by reviewing information provided to Kleinfelder by the client and by consulting various resources such as aerial photographs, agency files, and historic maps.

Section 5, **Records Review**, is a compilation of Kleinfelder's review of several databases available from federal, state, and local regulatory agencies regarding hazardous substance use, storage, or disposal at sites an applicable distance from the centerline of the railroad tracks. Kleinfelder reviewed available records with potential to pose concern to soil and groundwater beneath the alignment, but not greater than one eighth-mile radius of the centerline of the railroad tracks.

Section 6, **Site Reconnaissance**, describes Kleinfelder's site observations during the site reconnaissance and observations of adjacent parcels.

Section 7, **Interviews**, described Kleinfelder's interviews with local regulatory and permitting agencies.

Section 8, **Evaluation**, is a presentation of our findings and conclusions regarding the information in Chapters 3 through 6; and presents our opinion regarding the presence of Potential Environmental Conditions at the site.

Copyright 2010 Kleinfelder

Section 9, **Potential Impacts**, is a summary of potential impacts that the potential environmental concerns may have to the proposed project.

Section 10, **Recommendations**, is a summary of Kleinfelder's recommendations as they pertain to the proposed project.

Section 11, **References**, is a summary of the resources used to compile this report.

Pertinent documentation regarding the site is included in the appendices of this report.

2.3 SIGNIFICANT ASSUMPTIONS

The study area is a corridor approximately 15 miles long and ¼ mile wide, consisting of an area of 1/8 mile from the centerline of the existing railroad right of way (ROW). Kleinfelder understands that the proposed project consists of repairing and potentially upgrading the existing railroad alignment in place, with the exception of minor realignments in within the City of Monterey. As such, Kleinfelder's expectation is that the project will involve minimal ground impacts to surface and near surface soils and will avoid contact with groundwater. As such, this study report focuses on potential impacts to surface and near surface soils. A series of proposed Park and Ride facilities, which will extend beyond the current ROW, are addressed in separate Phase I reports.

Due to the length of the corridor, groundwater flow patterns are not discussed regionally, but on a case-by-case basis when deemed relevant.

2.4 LIMITATIONS AND EXCEPTIONS

The attached report is a qualitative assessment. Kleinfelder offers a range of investigative and engineering services to suit the needs of our clients, including more quantitative investigations.

The scope of this report does not incorporate non-scope considerations, such as asbestos/lead-based paint, radon, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, high voltage power lines, indoor air quality, and vapor intrusion as a contributing indoor air quality issue.

Copyright 2010 Kleinfelder

Kleinfelder offers various levels of investigative and engineering services to suit the varying needs of different clients. It should be recognized that definition and evaluation of geologic and environmental conditions are a difficult and inexact science. Judgments leading to conclusions and recommendations are generally made with incomplete knowledge of the subsurface conditions present due to the limitations of data from field studies. Although risk can never be eliminated, more-detailed and extensive studies yield more information, which may help understand and manage the level of risk. Since detailed study and analysis involves greater expense, our clients participate in determining levels of service that provide adequate information for their purposes at acceptable levels of risk. More extensive studies, including subsurface studies or field tests, can be performed to reduce uncertainties. Acceptance of this report will indicate that Parsons has reviewed the document and determined that it does not need or want a greater level of service than provided.

Kleinfelder performed this Preliminary Corridor Environmental Assessment in general accordance with the proposed scope subsequently approved by our Client. This work was performed in a manner consistent with that level of care and skill ordinarily exercised by other members of Kleinfelder's profession practicing in the same locality, under similar conditions and at the date the services are provided. Our conclusions, opinions and recommendations are based on a limited number of observations and data. It is possible that conditions could vary between or beyond the data evaluated. Kleinfelder makes no other representation, guarantee or warranty, express or implied, regarding the services, communication (oral or written), report, opinion, or instrument of service provided. Environmental issues not specifically addressed in this report were beyond the scope of our services and not included in our evaluation.

Land or facility use, on- and off-site conditions, regulations, or other factors may change over time, and additional work may be required with the passage of time. Since site activities and regulations beyond our control could change at any time after the completion of this report, our observations, findings, and opinions can be considered valid only as of the date of the site visit.

During the course of the performance of Kleinfelder's services, hazardous materials may have been discovered. Kleinfelder assumes no responsibility or liability whatsoever for any claim, loss of property value, damage, or injury that results from

Copyright 2010 Kleinfelder

preexisting hazardous materials being encountered or present on the project site, or from the discovery of such hazardous materials. Nothing contained in this report should be construed or interpreted as requiring Kleinfelder to assume the status of an owner, operator, or generator, or person who arranges for disposal, transport, storage or treatment of hazardous materials within the meaning of any governmental statute, regulation or order. Parsons or the property owner is solely responsible for directing notification of all governmental agencies, and the public at large, of the existence, release, treatment or disposal of any hazardous materials observed at the project site, either before or during performance of Kleinfelder's services. Parsons or the property owner is responsible for directing all arrangements to lawfully store, treat, recycle, dispose, or otherwise handle hazardous materials, including cuttings and samples resulting from Kleinfelder's services.

2.5 SPECIAL TERMS AND CONDITIONS

TAMC and Kleinfelder did not agree to any special terms and conditions for performing this Preliminary Corridor Environmental Assessment.

Copyright 2010 Kleinfelder

3.0 STUDY AREA SETTING

The study area setting is presented to assess the potential for onsite contamination and offsite contaminant migration, if present. The location of the railroad ROW is shown on Figure 1.

3.1 LOCATION DESCRIPTION

The information presented below describes the physical location of the project. This information was obtained from client provided Conceptual Plans for Track Restoration prepared by Parsons for TAMC, the City of Monterey and CalTrans. Figure 1 shows the approximate location of the proposed alignment.

The proposed project will follow the existing rail locations, with exceptions as noted. The alignment location begins at the intersection of Blackie Road and Wood Street in Castroville. The alignment crosses agricultural areas southbound toward Marina. The alignment parallels Del Monte Blvd in Marina. Del Monte Blvd merges with Highway 1 near the border of Marina and the former Fort Ord Army Base. The alignment parallels Highway 1 through Fort Ord. Del Monte Blvd exits Highway 1 near the border of Fort Ord and Seaside/Sand City. The alignment parallels Del Monte Blvd through Seaside, Sand City and Monterey. It is our understanding that the proposed alignment will be diverted south of the historic alignment near the intersection of Del Monte Blvd and Park Ave to avoid bisecting a park. The alignment continues to the end of Del Monte Blvd. The approximately 500 final feet of the alignment parallel Lighthouse Avenue in Monterey and end at Custom House Plaza.

3.2 SITE SOILS

Geologic formations found along the alignment are of Quaternary age and vary from recent and older sand dune deposits to fine-grained alluvial deposits associated with the Salinas Valley. Man-made fills are also present along the alignment, most notably associated with Monterey Harbor at the south end and those materials placed during construction of the rail line. The geologic conditions along the alignment are presented on Figure 2, which is based on regional mapping by Wagner and others (2002). Following are summaries of the geologic units and their relative distribution along the alignment. The units described are limited to those directly underlying the alignment,

Copyright 2010 Kleinfelder

and are presented from youngest to oldest. Soil unit descriptions provided in the summaries are based on regional maps prepared by the USDA National Cooperative Soil Survey located at http://websoilsurvey.nrcs.usda.gov/app/HomePage.htm .

Artificial Fill (Map Symbol: af): Artificial man-made fills are distributed along the alignment and include those deposits associated with construction of the rail line and other deposits associated with other man-made features. Artificial fills associated with rail line construction include the embankment fills typical of areas where the rail bed is elevated above the surrounding area by a few feet to more significant embankments associated with the Salinas River bridge. Fills associated with man-made features include those along the southern end of the alignment in Monterey Harbor and other fills located northwest of MP 124+00 on the southeast shore of Roberts Lake. Composition of the fill materials vary from silt and clay to sand and gravel and in thickness from a few feet to tens of feet.

Flood Plain Deposits (Map Symbol: Qfl): Holocene age flood plain deposits associated with the Salinas River valley extend between MP 111+00 to about MP 113+70. These deposits consist of fine-grained layers of silt and clay with variable amounts of fine sand. Soil units mantling these deposits include the Diablo Clay, Pacheco Clay, Metz fine sandy loam and complex, Alviso silty clay loam. These soil units, except for the Metz units, typically contain highly expansive clays and variable amounts of organic material.

Dune Sand (Map Symbol: Qd): Holocene age dune sand deposits form a belt of parabolic dunes directly parallel to the Monterey Bay shoreline and within the study area extend from about MP 114 to MP 125. These deposits directly underlie the alignment between approximately MP 121 to MP 122 and portions of the alignment between MP 118 and 119. These dunes are described by Cooper (1967) as the "Flandrian" dune deposits, which are associated with the general rise in global sea level that began about 18,000 to 19,000 years ago. The dune deposits consist of poorly graded sand, which is prone to wind erosion when not stabilized with vegetation.

Older Dune Sand (Map Symbol: Qod): Late Pleistocene age older dune sand deposits underlie the majority of the alignment and extend from about MP 113+70 to MP 122+50. These deposits lie on the leeward side of the active, or younger, dune sand deposits previously described. These deposits consist of silty sand and poorly graded sand,

Copyright 2010 Kleinfelder

which are prone to erosion when not stabilized with vegetation. Soil units associated with the older dune sand include the Oceano loamy sand and the Baywood sand. Both of these units are good for use as roadway fills, but poor for use as sand fill due to excess fines content.

Fan Deposits of Antioch (Map Symbol: Qfa): Middle Pleistocene age fan deposits of Antioch (Dupre and Tinsley, 1980) are located at the northern end of the alignment, and extend from its very northern end to just south of MP 111 at Temblodero Slough. These deposits consist of semi-consolidated layers of well to poorly graded sand and silty sand with variable amounts of fines. The Santa Ynez fine sandy loam is the main soil unit associated with this formation, and can consist of lean clay within a few feet of the surface.

Marine Terrace Deposits (Map Symbol: Qmt): Late Pleistocene age marine terrace deposits underlie the southern portions of the alignment from about MP 122+50 to the southern end of the rail line. In this area, Dupre (1990) and Clark and others (1997) divide the terraces into the Oceanview and Lighthouse terraces, which formed between 102,000 and 124,000 years ago. These deposits consist of semi-consolidated layers of sand with variable amounts of fines, and are covered locally by thin deposits of eolian (wind blown) sand. Soil units associated with the terrace deposits include the Baywood sand and the Tangair fine sand. Locally, the Baywood sand includes duripan deposits in the upper 4 to 5 feet, which are strongly cemented layers of soil that can be difficult to excavate.

3.3 REGIONAL AND LOCAL GEOLOGY

3.3.1 Regional Geology

The site lies within the Coast Range Geomorphic Province of California. This province is characterized by northwest-trending mountain ranges and intervening valleys, which are the dominant northwest structural trend in bedrock of the region. In the vicinity of the project site within Monterey County, bedrock is comprised of granitic plutonic rocks of the late Mesozoic Salinian Block, which are similar in mineral composition, chemistry, and age of the central Sierran Batholith and assumed to have been separated from the southern Sierra Nevada and transported north by the San Andreas Fault system (Harden, Deborah R., 1998, California Geology). The Salinian Block is fault bounded

Copyright 2010 Kleinfelder

on the west by the Sur-Nacimiento fault and on the east by the San Andreas fault. Surface soils in the vicinity of the project site are composed of alluvium derived from granitic rock.

3.3.2 Local Geology

Geologic formations found along the alignment are all of Quaternary age and vary from recent and older sand dune deposits to fine-grained alluvial deposits associated with the Salinas Valley. Man-made fills are also present along the alignment, most notably associated with Monterey Harbor at the south end and those materials placed during construction of the rail line.

3.4 GROUNDWATER

According to the California Department of Water Resources (CDWR) (2003), the project alignment is located in the Salinas Valley groundwater basin. The alignment crosses over two of the subbasins within Salinas Valley basin. These subbasins are known as the 180/400 Foot Aquifer and Seaside subbasins, whose boundary is located south of MP 120+00. The Salinas Basin aquifer is composed of as much as 2,000 feet of alluvial deposits of Holocene and Pleistocene age that overlie older Pleistocene deposits at depth (Hanson and others, 2002).

Groundwater levels in the coastal portions of the basin are influenced by daily tidal variations, along with surface input, land use and subsurface lithology. Groundwater level data from previous projects adjacent to the alignment suggest that groundwater is commonly present at rather shallow levels, within the upper 20 feet of the ground surface. Depending upon local subsurface conditions, it is possible seasonally perched groundwater could be encountered within surface and near-surface deposits throughout the length of the alignment, particularly in early spring or after periods of prolonged rainfall.

Based on topography, location and length of the alignment, Kleinfelder assumes that the groundwater gradient is somewhat variable, but generally toward Monterey Bay and the Pacific Ocean which is generally west or north of the alignment.

Copyright 2010 Kleinfelder

4.0 HISTORY OF THE SITE

The history of the alignment and nearby properties were researched to identify obvious uses of adjacent properties from the present to first developed use or back to 1940, whichever is earlier. The objective was to evaluate the likelihood that past uses of nearby properties resulted in potential environmental conditions that may affect soil or groundwater within the alignment. Table 4.1 summarizes the information reviewed during this assessment. Kleinfelder used this information to establish the site history.

TABLE 4.1: HISTORICAL INFORMATION REVIEWED

4.1 AERIAL PHOTOGRAPHS

A review of historical aerial photography may indicate past activities at a property that may not be documented by other means or observed during a site visit. The effectiveness of this technique depends on the scale and quality of the photographs and the available coverage. Aerial photographs were obtained from several historical photograph collections through EDR. Copies of the aerial photographs obtained by Kleinfelder are included in Appendix D. For ease of identification, Kleinfelder noted the

Copyright 2010 Kleinfelder

approximate Station numbers for various items observed within the aerial photos. Station numbers were approximated based on alignment maps provided by Parsons.

1956: 1"=1000'

A total of eight pages of photographs were provided for 1956, providing complete coverage of the alignment. In 1956 the entire railroad alignment within the study area was in place. The cities and areas of Castroville, Marina, Fort Ord Army Base, Seaside, Sand City, Del Monte and Monterey were located along the alignment from north to south. Note: Seaside and Sand City are geographically parallel cities that form the eastern and western boundaries of the alignment, respectively. In 1956 the northern-most portion of the alignment was an approximately one block commercial/industrial area at the southern end of Castroville followed by approximately five miles of agricultural uses approximate stations 5+00 through 280+00. A variety of assumed residential structures are located adjacent to the alignment. Aboveground storage tanks (ASTs) are often associated with agricultural uses, however based on the scale and resolution of the photographs, these features would not have been observable if present.

The City of Marina is located south of the agricultural area, beginning at 280+00. In 1956 Marina was a minimally developed mixed agricultural and residential area. A single large S-shaped building is located at Carmel Avenue. This structure is currently a gambling establishment.

South of Marina is the Fort Ord Army Base, which begins at approximately 369+00. Military uses of a structure are rarely visible in aerial photography. The bulk of the northern part of the base is the main garrison (as labeled on maps discussed below). Main garrison buildings likely have varied uses, but are generally consistent in size. A grid area is located west of the alignment, immediately north of a railroad loop spur at approximately 462+00 through 464+00. The grid is labeled on topographic maps as a sewage disposal plant. The southern portion of Fort Ord includes residential areas.

South of Fort Ord is Seaside to the east of the alignment and Sand City to the west of the alignment, beginning at approximately 605+00. This area is characterized by a fringe of commercial/industrial uses with residential beyond. The commercial/industrial areas are identified in historic maps and the site visit as including a significant number

Copyright 2010 Kleinfelder

of automotive related facilities. South of Seaside is the Del Monte region of present-day City of Monterey, beginning at approximately 685+00. A tank farm is located northwest of the alignment in Del Monte at approximately 705+00 through 714+00. The tank farm has seven large and several smaller ASTs. Although these tanks appear to be downgradient of the alignment, based on their size the tank farm and associated fueling terminal adjacent to the rail alignment have the potential to affect the project. The tank farm is discussed in greater detail in Sections 4.2 and 5.1. The alignment at this point is primarily east-west trending. West of Del Monte is the current Naval Post-Graduate School from approximately 745+00 to 758+00. The Naval Post-Graduate School consists of a series of large structures interspersed with trees. Monterey consists of a mix of residential and commercial/industrial areas. The alignment ends at what is currently Fisherman's Wharf at approximately 801+00.

1968: 1"=1000'

A total of eight pages of photographs were provided for 1968, providing complete coverage of the alignment. The image quality for the 1968 photographs is generally poor, preventing observation of fine detail. A comparison of the 1968 photograph to the 1956 photograph is as follows:

- Commercial/industrial uses are located both east and west of the alignment in Castroville;
- The agricultural area is substantially similar;
- Marina is more heavily developed, with residential areas east of the alignment;
- The area between Marina and the main garrison of Fort Ord appears to be residential;
- What appear to be three ASTs or wastewater ponds are located immediately west of the alignment, approximately 2,000 feet north of the sewage disposal plant at approximately 460+00;
- The sewage disposal plant has expanded to the south;
- A residential area south of the main garrison, which was previously beyond the scope of area discussed has expanded toward the alignment;

Copyright 2010 Kleinfelder

- A portion of the residential area at the southern end of Fort Ord has been replaced with what appears to be a school based on the presence of a running track north of approximately station 610+00;
- Sand City has expanded significantly, with primarily commercial/industrial uses;
- A road in the current location of Highway 1 runs parallel to the alignment between Sand City and the adjacent beach;
- The ASTs northwest of the alignment appear to have been removed, however their former locations remain visible in the aerial photograph;
- The Naval Post-Graduate School is generally unchanged;
- Fisherman's Wharf in Monterey has expanded, with adjacent structures removed and additional mooring locations in the bay.

1971: 1"=1000'

A total of four pages of photographs were provided for 1971, providing partial coverage of the alignment. Areas not covered include a portion of agricultural area north of Marina through the City of Marina, Fort Ord, and the northern end of Seaside/Sand City (no coverage approximately 190+00 to 643+00). A comparison of the 1971 photograph to the previous photographs is as follows:

- The commercial/industrial block west of the alignment in Castroville is more densely developed;
- The agricultural area is substantially similar;
- Sand City has expanded significantly, with primarily commercial/industrial uses;
- A road in the current location of Highway 1 runs parallel to the alignment between Sand City and the adjacent beach;
- The ASTs northwest of the alignment appear to have been removed, however their former locations remain visible in the aerial photograph;
- The Naval Post-Graduate School is generally unchanged;

Copyright 2010 Kleinfelder

- Fisherman's Wharf in Monterey has expanded, with adjacent structures removed and additional mooring locations in the bay.

1974 & 1975: 1"=1000'

A total of four photographs were provided for 1974 and 1975, providing partial coverage of the alignment. Areas covered include a portion of the agricultural area immediately north of Marina, Marina, Fort Ord, and Seaside/Sand City (coverage from approximately 190+00 to 696+00). A comparison of the 1974 and 1975 photographs to the previous photographs is as follows:

- The agricultural area is substantially similar;
- Marina is more heavily developed, with residential and recreational development immediately west of the alignment;
- Additional structures and roads are visible on Fort Ord west of the alignment in the vicinity of the main garrison;
- There appears to be infill development in Sand City between the alignment and Highway 1, however the poor image quality prevents a clear comparison.
- Seaside appears to be generally similar to the 1968 photograph, with commercial/industrial uses adjacent to the alignment and residential uses further east.

1981: 1"=1000'

A total of eight photographs were provided for 1981, providing complete coverage of the alignment.

The area of the alignment from Castroville (0+00) to Marina is characterized by agricultural land. Several structures are located at the intersection of Monte Road and Nashua Road (94+00). The alignment crosses the Salinas River (150+00) and a commercial business, possibly a boat launch or marina is observed on the photo at approximately 142+00. A commercial/industrial parcel is observed from 165+00 to 179+00 and is assumed to be occupied by the Dole food processing plant. The City of Marina is more densely developed than in the 1974/1975 photos. The Fort Ord area

Copyright 2010 Kleinfelder

appears to be essentially unchanged from the 1974/1975 photos. The alignment through the cities of Seaside/Sand City are essentially unchanged from the 1974/1975 photos, with additional commercial development west of the railroad alignment and existing commercial and residential development observed to the east of the alignment. The portion of the alignment within the City of Monterey was not covered within the 1974/1975 photos, but in the 1981 photos, it appears essentially unchanged from the 1971 photos, with the exception that the ASTs from the tank farm previously located west of the alignment on the dunes at 705+00 to 714+00 are no longer observed.

1987: 1"=1000'

Eight photographs were provided for 1987 which cover the entire alignment but the photograph quality is poor. The rail alignment and nearby vicinity appears to be essentially unchanged from the 1981 photographs.

1998: 1"=1000'

Eight photographs were provided for 1998 which cover the entire alignment. The alignment is essentially unchanged with the following exceptions:

- The area along the alignment at the northern boundary of the City of Marina is further developed and appears to be under construction to the west of the railroad tracks (280+00).
- The majority of the structures along the northern portion of Fort Ord, west of the railroad alignment within the dunes appear to have been removed or the photo quality is poor (369+00 to 428+00).
- A new commercial shopping center has been built on the west side of the alignment in Sand City (612+00 to 638+00).
- The former oil company terminal (705+00 to 714+00) appears to have been removed.

Copyright 2010 Kleinfelder

2001: 1"=800'

Twelve photographs were provided for 2001 and cover the entire alignment. The alignment and vicinity are essentially unchanged from the 1998 photograph.

2005: 1"=604'

One photograph was provided for 2005 and covers a portion of the alignment through Fort Ord (403+00 to 466+00). This section of the alignment is essentially unchanged from the 2001 photograph.

4.2 SANBORN FIRE INSURANCE MAPS

Sanborn Fire Insurance Maps provide historical land use information for some metropolitan areas and small, established towns. Sanborn maps were available for portions of the alignment for the years: 1885, 1888, 1892, 1905, 1912, 1926, 1943, 1949, 1956, and 1962. Multiple maps were available for each year, with the exception of 1885, for a total of 42 maps. Maps are limited to Monterey, Del Monte and the unincorporated area adjacent to Del Monte.

1885 – This map covers the southern terminus of the alignment from Washington St to Pacific St in Monterey. It pre-dates development of the railroad. The area is depicted as commercial/industrial, with a lumber yard, livery, multiple paint shops and various stores. Dwellings are intermingled with other uses.

1888 – This map shows infill development, with the addition of a brewery, planning mill, cement kiln, etc. The northeast corner of the maps, adjacent to the current alignment, is labeled as 'Swamp land.'

1892 – The railroad is shown in the northern portion of the maps, transecting the area formerly labeled as 'Swamp land.' Continued mixed use infill development is apparent.

Note: Review of maps from this point forward will focus on features likely to use significant quantities of hazardous materials in immediate proximity to the railroad alignment. Due to the frequency of occurrence the presence of small fuel oil storage for

Copyright 2010 Kleinfelder

dwelling and small commercial/industrial features is not discussed. This is a common occurrence for the time period, and is found throughout the alignment.

1905 – This map depicts a portion of Monterey, along the portion of the alignment that runs east-west. Features mentioned as north of the alignment are likely to be downgradient, those to the south are likely to be upgradient. The Del Monte Gas Works, which includes a coal house, oil tank, and purifying room, located immediately north of the alignment, on a railroad spur. The Coast Valley Gas and Electric Co. located between Adams and Figueroa, is located south of the alignment. The facility includes a series of interior and exterior gas tanks.

1912 – This map indicates that the Del Monte Gas Works is no longer in operation, however the facility structures are shown as present. The Coast Valley Gas & Electric Co. has expanded, including the addition of a turbine generator and additional oil tanks.

1926 – This map shows the addition of Del Monte Blvd, which roughly parallels much of the alignment. The Del Monte Gas Works is no longer shown on the maps provided. The Coast Valley Gas & Electric Co. has been replaced by a 100 car garage, barber, fishermen's equipment warehouse, barber, laundry and multiple residences.

The Hotel Del Monte, located south of the alignment is shown to have a 10,000-barrel (420,000-gallon) partly below grade concentrated fuel oil tank. The Hotel appeared on previous maps; however features of type and proximity to pose a concern for the project were not associated with the Hotel.

The Associated Oil Co's. Tank Farm is shown immediately north of the alignment. Six 80,000-barrel (3,360,000-gallon) crude oil and light crude oil tanks, one 2,960,000-gallon gasoline tank, one 315,000 gallon crude balance tank, and an oil warehouse/loading area were located north of the alignment. As discussed in Section 5, hydrocarbons were applied to the ground in this area for the purposes of sand stabilization and to prevent corrosion to the bottom of the tanks.

1943 – The Associated Oil Co's. Tank Farm in this map contains two additional 420,000-gallon gasoline tanks when compared to 1926. Storage within the tank farm totals more than 22 billion gallons.

Copyright 2010 Kleinfelder

The Hotel Del Monte fuel oil tank is no longer present.

1949 – The Associated Oil Co's. Tank Farm is not significantly changed from the 1943 map.

New features adjacent to the railroad alignment include a Used Auto Sales facility at the southern terminus of the alignment between the location of the railroad line and the proposed project alignment. An auto repair shop is also located between the alignment and Del Monte Ave at Park Ave.

1956 – This map depicts a series of automotive shops, fueling stations, a laundry facility, and related structured between Del Monte Ave and the historic railroad alignment. This includes automotive shops and the laundry facility in the proposed location for the new railroad alignment.

The Associated Oil Co's. Tank Farm is not significantly changed from the prior two maps.

1962 – This map shows partial conversion of the automotive shop row to other commercial/industrial uses including furniture, food processing and upholstery.

The Associated Oil Co's. Tank Farm is not significantly changed from the prior three maps.

4.3 HISTORICAL TOPOGRAPHIC MAPS

Kleinfelder obtained historical topographic maps of the proposed alignment from EDR. The topographic maps reviewed for this report are summarized below. Copies of the maps are included in Appendix D.

Copyright 2010 Kleinfelder

TABLE 4.2: HISTORICAL TOPOGRAPHIC MAPS REVIEWED

QUADRANGLE	Series	Year	Scale
MARINA	7.5 Minute Series	1948	1 Inch = 2,083 Feet
MARINA	7.5 Minute Series	1968	1 Inch = 2,000 Feet
MARINA	7.5 Minute Series	1974	1 Inch = 2,000 Feet
MARINA	7.5 Minute Series	1983	1 Inch = 2,000 Feet
MONTEREY	15 Minute Series	1913	1 Inch = 5,208 Feet
MONTEREY	15 Minute Series	1947	1 Inch = 5,208 Feet
MONTEREY	7.5 Minute Series	1950	1 Inch = 2,083 Feet
MONTEREY	7.5 Minute Series	1968	1 Inch = 2,000 Feet
MONTEREY	7.5 Minute Series	1983	1 Inch = 2,000 Feet
MONTEREY	7.5 Minute Series	1997	1 Inch = 2,000 Feet
PRUNEDALE	7.5 Minute Series	1954	1 Inch = 2,000 Feet
PRUNEDALE	7.5 Minute Series	1968	1 Inch = 2,000 Feet
PRUNEDALE	7.5 Minute Series	1975	1 Inch = 2,000 Feet
PRUNEDALE	7.5 Minute Series	1981	1 Inch = 2,000 Feet
PRUNEDALE	15 Minute Series	1987	1 Inch = 4,167 Feet
PRUNEDALE	7.5 Minute Series	1993	1 Inch = 2,000 Feet
SAN JUAN BAUTISTA	15 Minute Series	1917	1 Inch = 5,208 Feet
SAN JUAN BAUTISTA	15 Minute Series	1947	1 Inch = 4,167 Feet
SEASIDE	7.5 Minute Series	1950	1 Inch = 2,083 Feet
SEASIDE	7.5 Minute Series	1968	1 Inch = 2,000 Feet

Maps are discussed as a cluster of years to cover as much of the alignment as feasible in each paragraph without duplicating segments.

1913 (Monterey) & 1917 (San Juan Bautista)

The 1913 and 1917 maps show the alignment in its current location, bordered by the communities of Castroville, Seaside, Del Monte Heights, Del Monte and Monterey. The Presidio Military Reservation is located west of the southern terminus of the alignment.

1947 (Monterey & San Juan Bautista) & 1948 (Marina)

The 1947/1948 maps indicate the development of Highway 1, bordering portions of the alignment. Significant changes include the presence of Marina, a minimally developed community near the center of the alignment, the addition of Fort Ord between Marina and Seaside/Del Monte Heights and the addition of the Monterey Municipal Airport south of Del Monte. Fort Ord consists of the Main Garrison in the northern portion of the base and Fort Ord Village, immediately north of Seaside. A loop spur has been

Copyright 2010 Kleinfelder

added to the alignment on Fort Ord, southwest of the garrison. The location of the spur is labeled 'Gigling Siding.' This is likely a reference to Camp Gigling, which pre-dated Fort Ord. The Fort Ord Village Disposal Plant and the Sewage Disposal Plant are both located west of the alignment.

A series of crude oil and refined petroleum tanks (discussed in the Sanborn Maps above) have been installed north of the alignment in the Del Monte area.

Each of the communities shown on both the 1913/1917 maps and on the 1947/1948 maps have expanded.

1950 (Monterey & Seaside) & 1954 (Prunedale)

The 1950/1954 maps show continued development of Monterey, Seaside and Castroville.

1968 (Marina, Monterey, Prunedale & Seaside)

These maps show development of the community of Noche Buena in the Fort Ord area, between the garrison and the former location of Fort Ord Village. Fort Ord Village has been replaced by a high school. The Fort Ord Village Disposal Plant is no longer present. The Sewage Disposal Plant also appears to have been removed; however a series of round structures, possibly holding tanks are present adjacent to the former plant.

1974 (Marina) & 1975 (Prunedale)

These maps show what appears to be barracks on Fort Ord north of the main garrison. Significant expansion of Marina and limited additional development in Castroville are also depicted.

1981 (Prunedale) & 1983 (Marina & Monterey)

These maps show significant development on Fort Ord between the main garrison and Noche Buena As well as development within each of the communities shown. The purpose of the Fort Ord development is unclear from these maps.

1987 (Prunedale)

This map shows expansion and development of communities northeast of Castroville, but minimal changes in proximity to the alignment.

Copyright 2010 Kleinfelder

1993 (Prunedale) & 1997 (Monterey)

These maps show apparently industrial development in Castroville adjacent to the alignment.

Continued development of the various communities is shown throughout the time frame of the topographic maps.

4.4 PREVIOUS ASSESSMENTS

Two previous assessments were available for review.

Kleinfelder Phase II ESA, September 2003

Kleinfelder's report Phase II Environmental Site Assessment, 13-mile Segment, Monterey Branch Line, Monterey County, California, dated September 3, 2003, addressed the segment of the alignment from MP 110.8 to MP 123.3. The 2003 report consisted of a partial Phase I ESA to identify potential RECs and a limited Phase II ESA to address the identified RECs. Identification of RECs was based, in part, on a July 2002 Hazardous Materials Assessment Report prepared by STV Incorporated which addressed a 10-mile section of the 13-mile segment.

Kleinfelder's 2003 assessment included records research, site reconnaissance, subsurface exploration with limited soil sampling, and lab testing for potential contaminants.

The assessment involved identifying areas of concern along the alignment using records research, review of historical maps and photographs, and site reconnaissance. Six facilities were identified in the EDR radius report as being physically located or encroaching within the alignment.

- US Army at former Fort Ord;
- Graniterock batch plant, Sand City;
- Monterey Jaguar/ Rolls Royce/ Ferrari Dealership, Seaside;
- Northern California Collision Center/Miracle Auto Painting, Seaside;
- Scandia Volvo, Seaside; and
- Former Mohr Imported Car facility, Seaside.

Copyright 2010 Kleinfelder

Based on a review of available aerial photographs, three ASTs and one graded area with equipment storage were observed and considered areas of concern.
During Kleinfelder's site reconnaissance, ten areas of concern were identified along the alignment: These areas consisted of materials storage (e.g. ASTs, drums and buckets), equipment storage, staining/discoloration, and potential lead-based paint on a railroad bridge.

The second stage involved the collecting of surface and near-surface soil samples along the alignment. Locations were intended to evaluate chemicals of potential concern (COPC) in areas identified earlier and to address common environmental conditions associated with railroads and agricultural areas.

Between April 28 and July 10, 2003, Kleinfelder conducted limited soil sampling along the alignment in accordance with a proposed workplan dated April 10, 2003. The soil samples were collected at areas of concern from borings drilled to a maximum of five feet beneath the existing ground surface. The samples were tested for total petroleum hydrocarbons (diesel and motor oil ranges), CAM17 metals, volatile organic compounds (VOCs), organochlorinated pesticides, chlorinated herbicides, and creosote (coal tar). Based on the analytical results, Kleinfelder concluded that the COPCs were not likely to pose an unacceptable hazard for the proposed rail alignment. Based on the nature of the proposed construction, however, Kleinfelder recommended that TAMC develop a soil sampling plan for worker safety and soil disposal recommendations.

<u>STV Incorporated, Hazardous Material Assessment Report, 2002</u>
STV Incorporated performed a Hazardous Material Assessment Report in 2002 for a 10-mile rail segment from. The following RECs were identified:

- Potential sources of contamination to railbed include fuel oil, lubrication oil, hydraulic oil, fuels, solvents, paints, and herbicides.
- De minimis concentrations of petroleum products, lead, pesticides in the railroad ballast sub ballast, and ground.

The 2002 rail alignment included the currently proposed Fort Ord Park & Ride site as an impacted area from activities at Fort Ord; however, the current proposed alignment runs on the opposite side of Highway 1. Due to differences in the proposed location of the

Copyright 2010 Kleinfelder

alignment, RECs in the 2002 Assessment are not directly applicable to the current assessment of the alignment.

Copyright 2010 Kleinfelder

5.0 RECORDS REVIEW

5.1 STANDARD ENVIRONMENTAL RECORD SOURCES

The purpose of the records review is to obtain and review records that identify potential impacts to soil and groundwater within the right of way of the proposed alignment. Kleinfelder reviewed Federal, State, and local environmental databases available from regulatory lists. Database information was compiled by Environmental Data Resources, Inc. (EDR) of Southport, Connecticut and is summarized. A copy of the full EDR report is provided in Appendix A. The acronyms used in Table 1 are defined in EDR's Site Assessment Report (Appendix A) in the Government Records section.

EDR utilizes a geographical information system to plot the locations of reported incidents. This information is reviewed by Kleinfelder to help establish if the alignment itself or nearby properties have been included on the environmental databases and lists. The EDR report includes focus maps showing the location of sites identified in the environmental databases and lists with respect to the proposed water pipeline corridor. A summary of pertinent information for these properties, including responsible party, property address, and databases on which the property appears, is located within the Executive Summary of the EDR report.

A summary of properties within the one 1/8 mile buffer zone from the centerline of the proposed rail alignment, listed in Federal, State, and local environmental databases, is presented below in Tables 1 and 2. Table 1 presents databases in which one or more facility was listed within the applicable radius of the proposed alignment and indicates the number of facilities identified in each. Table 2 presents a list of databases which were searched, but no facilities were identified within the applicable search radius.

Copyright 2010 Kleinfelder

Table 5.1 : EDR Databases Reviewed with Facilities Affecting the Project

FEDERAL	Total Number of Listed Facilities within Study Area	Database Likely to Contain Information Affecting the Project	Number of Facilities Within 1/8 Mile of the Proposed Alignment

The following discussion focuses on properties identified in the environmental databases and located within the study area that in our opinion have a potential to impact the project. Kleinfelder selected databases for review based on our understanding of the project and our familiarity with the databases involved. For example the NPDES database, which contains information of construction projects with stormwater permits, was not reviewed do to expected lack of pertinent data. Kleinfelder performed a visual review of EDR maps and selected locations within 1/8 mile of the alignment for the 16 databases (NPL, CERCLIS, RCRA-LQG, RCRA-SQG, US INST CONTROL, ERNS, DOD, FUDS, SWF/LF, CHMIRS, AST, DEED, CDL, RESPONSE, ENVIROSTOR, and Manufactured Gas Plants) selected as likely to contain information pertinent to the project. In addition Kleinfelder performed a GIS query for sites within 500 feet of the alignment. Facilities listed on the LUST, SLIC, UST, HIST UST, FID UST, and SWEEPS UST within 500 feet of the alignment were also reviewed.

Copyright 2010 Kleinfelder

5.1.1 Federal Databases

NPL, CERCLIS, US INSTITUTIONAL CONTROL, and DOD: These databases contain information on Superfund sites, proposed Superfund sites, sites in which the allowed uses have been restricted, and sites operated by the Department of Defense, respectively. With the exception of the DOD database, the Fort Ord Military Reservation (Fort Ord) is the sole listing on each database within the EDR search radius of the site. The DOD database contains listings for both Fort Ord and the Presidio of Monterey. These facilities are discussed below in Section 5.3.

RCRA LQG & SQG: RCRA Large Quantity Generator (LQG) and Small Quantity Generator (SWG). The RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites that generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). LQGs generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. SQGs generate between 100 Kg and 1,000 kilograms (Kg) of hazardous waste per month.

A total of 3 LQGs and 52 SQGs were identified in proximity to the alignment, including Fort Ord. Fort Ord is discussed below in Section 5.3.1. For the remaining 54 facilities, Kleinfelder reviewed the violation status reported by EDR. For each facility EDR reported the status as "No violations found." Chemicals used at these facilities included petroleum hydrocarbons, pesticides and silver. Based on the lack of violations, it is Kleinfelder's opinion that these sites, based on listing within this database alone, are not likely to pose a concern to soil and/or groundwater within the proposed alignment right of way.

ERNS: The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The source of this database is the U.S. EPA. Twelve listings were reported on the ERNS database within 1/8 mile of the site. Three of these listings are for 250 Figueroa Street in Monterey. The

Copyright 2010 Kleinfelder

addresses for the ten sites, the material released, the medium affected and the potential to affect the project are as follows:

Address & City	Released Material	Medium
211 Reservation, Marina	Gasoline	Soil
840 Fir, Sand City	Ammonia	Air
895 Fir, Sand City	Ammonia	Soil
600 Ortiz, Seaside	Hydraulic Oil	Soil
336 Orange, Sand City	Not Reported	Soil
2200 Del Monte, Monterey	Sewage	Water
250 Figueroa, Monterey	Not Reported	Soil
Inner Harbor Of Monterey Bay, Monterey	Unknown Sheen	Water
No 1 University Circle Room B55, Monterey	Mercury	Water

5.1.2 State, Local, and Proprietary Databases

SWF/LF: The Solid Waste Facilities/Landfill Sites (SWF/LF) records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

The Sand City Dumpsite (aka Old Sand City Dump) is a pre-regulation, solid waste, closed landfill facility. Project wide screening was completed in 1987 and 1989. The facility was assigned a medium priority by the EPA. The Sand City Dump is located west of Highway 1 at the northern edge of Sand City, approximately 4 miles northeast of Monterey, in Monterey County (see Figure 1). The site is a 24.6-acre parcel located at Highway 1 and Fremont Boulevard in Seaside. The proposed alignment is located alongside to the west of the former landfill at approximately Station 600+00. This landfill is listed on the State's closed cleanup site list: http://www.calrecycle.ca.gov/SWFAcilities/CIA/Remedial/WorkPlan/Example/SandCity/CompletionRpt/#21.

The Fort Ord Demolition Landfill is listed on this database. The location of this landfill is beyond the 1/8 mile buffer however it is included in the discussion of Fort Ord in Section 5.3.1.

Copyright 2010 Kleinfelder

CHMIRS: The California Hazardous Material Incident Report System contains information on reported hazardous material incidents, i.e., accidental releases or spills. The source is the California Office of Emergency Services. Twelve listings were reported on the ERNS database within 1/8 mile of the site. Several appear to be duplicate listings for those reported in the ERNS database. The addresses for these sites, the material released, the medium affected and the potential to affect the project are as follows:

Address	Released Material	Medium
11000 Blackie Rd, Castroville	Ammonia	Not Reported
3350 Del Monte Blvd, Monterey	Not Reported	Not Reported
225 Reindollar, Marina Bldg #134	Not Reported	Not Reported
Fort Ord Main Gate	Various	See Section 5.3.1
840 Fir, Sand City	Ammonia	Air
600 Ortiz, Seaside	Hydraulic Oil	Soil
100 Lighthouse, Monterey	Oil Sheen	Surface Water (Pacific Ocean)
1560 Canyon Del Rey, Seaside	Grey Water	Water (Storm Drain)
2200 Del Monte, Monterey	Sewage	Surface Water (Pacific Ocean)
Figueroa St / Del Monte, Monterey	Sheen	Surface Water (Monterey Bay)
1 Helvic Ave, Monterey	Antifreeze/Motor Oil	Surface Water (Monterey Bay)
Intersection of Cortes St. / E. Franklin St, Monterey.	Antifreeze	Water (Gutter)

AST: The Aboveground Storage Tank database contains registered ASTs. The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database. Three facilities were identified within 1/8 mile of the corridor as follows:

Name	Address	AST Capacity	Distance	EDR ID
Monterey Peninsula Engineering	192 Healy Ave, Marina	4,600 gallons	<350 ft	30-11
Mr. Lubrication	1629 Del Monte Blvd, Seaside	1,335 gallons	on tracks	99-26
City Of Seaside	650 Olympia Ave, Seaside	8,500 gallons	<450 ft	99-26

Copyright 2010 Kleinfelder

Distance is distance from railroad rails. EDR ID is reported as 'location ID-Map page'.

Of these three sites, "Mr. Lubrication" is of the greatest concern. That facility appears to have extended its parking lot onto the railroad ROW. The location of the AST has not been determined. Depending on the actual proximity to the railroad it may be advisable to assess the condition of the AST and/or relocate the AST.

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes.

Embassy Suites Hotel (EDR ID 117-26), located at 1441 Canyon Del Rey Blvd in Seaside is listed on the DEED, RESPONSE, and ENVIROSTOR databases. It is located approximately 135 feet from the existing railroad rails. The site was formerly an automotive junkyard; plumbing, electrical and sheet metal shop; and lumber, hardware and furniture stores. Contaminants of concern are metals in soil and metals and TPH motor oil in groundwater. The site is covered in an asphalt cap. According to information provided by EDR, at the time of the most recent inspection the cap was in a good state of repair.

CDL: A listing of clandestine drug lab locations. The listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work. One clandestine drug lab was reported by EDR.

Illinois Tool Works (EDR ID 87-21, 26) located at 709 California Street is approximately 320 feet from the existing railroad alignment. The information provided by EDR did not contain information as to the type or amount of drugs grown/manufactured at this location. Based on the distance, this facility is unlikely to affect the project.

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

One site was listed on this database, Embassy Suites Hotel, which is discussed within the DEED database summary above.

Copyright 2010 Kleinfelder

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Two sites were reported on the Envirostor database. In addition, two sites on Fort Ord were listed. Fort Ord information is provided in Section 5.3.1 below. Embassy Suites Hotel is discussed under the DEED database, above. The (Former) Sand City Dump is discussed under the SWF/LF database, above.

Manufactured Gas Plant: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Although the EDR report contains three listings in the MGP database, they appear to be three listings for the same site. The site is located at the southwest corner of Figueroa St and Del Monte Blvd in Monterey, approximately 290 feet from the alignment. Given the distance and the minimal excavation planned, this facility is unlikely to affect the site.

Copyright 2010 Kleinfelder

LUST, UST, HIST UST, FID UST, and SWEEPS UST. These databases collectively contain information on current and former UST facilities as well as information of facilities with open or closed LUST cases. The table below lists UST containing facilities within 100 feet of the alignment as well as those within 500 feet of the alignment. LUST cases, if present, are indicated. The chemical of concern for these facilities is total petroleum hydrocarbons (gasoline, diesel, and/or motor oil) unless otherwise noted.

Table 5.3 – UST and LUST facilities within 500 feet of the alignment

Although individual facilities pose a limited risk to the project, as significant excavation of soils is not anticipated, care should be taken due to the number of facilities listed.

Copyright 2010 Kleinfelder

SLIC. This database contains information on releases which are not necessarily related to USTs. Four facilities within 500 feet of the alignment. Day's Inn at 1440 Del Monte Blvd in has a closed SLIC case. The chemicals of concern were not reported. Russo's Marine Fueling Station, at the intersection of Figueroa and Del Monte in Monterey had a TPH release. The facility is in the remediation stage. The Former Vapor Cleaners Site at 951 Del Monte Ave in Monterey had multiple TPH and solvent releases. The facility is the site assessment stage. The Chevron Bulk Plan/Tank Farm is discussed below.

Chevron USA Bulk Generator Plant / Del Monte Dune Tank Farm

Although the tank farm/bulk terminal (listed as Associated Oil Company the Sanborn Maps) is not listed on the EDR databases which were reviewed as part of this report, due to the nature and scope of the facility, it is discussed here. This facility is referenced by EDR at two locations: street address of 205 Ramona Avenue, and the Intersection of Ramona and Del Monte in the City of Monterey. The facility has an open SLIC case and a closed LUST case. Kleinfelder reviewed information in the State Water Board's Geotracker database website to obtain further information. According to information in Geotracker the dunes tank farm and terminal were constructed in 1926. According to the site history on Geotracker, "in the past, crude oil was poured into the sand to stabilize the sand and to form a partial water vapor barrier to prevent rusting of the bottom of the above ground storage tanks. Tidewater Associated Oil Company operated terminal facilities at the Del Monte Dunes property from 1926 to 1965. Phillips Petroleum Company operated [the] terminal from 1965 to 1976. In late 1983 through 1996, above and underground storage tanks and infrastructure were removed. Currently, this site is open space and a bike lane."

Kleinfelder reviewed the most recent available report on Geotracker, "First Semi-Annual 2009 Groundwater Monitoring and Sampling Results" by Science Applications International Corporation (SAIC), dated July 15, 2009. This report describes semi-annual monitoring of nine wells in the lower dunes and former terminal areas, which were sampled in April 2009. Depth to groundwater ranged from 8.48 (MW-7 located alongside the former railroad track) to 43.91 (MW-13 located on the upper path). Groundwater flow was reported to be toward the north-northwest with the gradient ranging from approximately 0.003 feet/foot (ft/ft) to 0.005 ft/ft.

Elevated hydrocarbons were reported in some of the wells sampled in SAIC's report. MW-4A, located adjacent to and upgradient of the railroad alignment, had a

Copyright 2010 Kleinfelder

concentration of TPHmo in groundwater of 1,200 ug/L. A well location map produced by SAIC and the July 2009 report is included in Appendix C.

5.2 ORPHAN SITES

The EDR report also lists "orphan" sites, properties for the location is not available in a readily map-able format. A total of 1364 orphan sites were listed for the alignment, however more than half of these orphan sites were referenced to a city known to be more than 1 mile from the alignment, including San Francisco, Oxnard, and Pebble Beach. A total of 662 orphan sites were listed for Castroville, Marina, Monterey, Monterey County, Presidio of Monterey, Sand City and Seaside. Orphan sites are not practicably reviewable due to the lack of location information. Due to the number of orphan sites Kleinfelder did not attempt to locate orphan sites for which addresses appeared to be sufficient to identify location but which were not mapped by EDR.

5.3 MILITARY SITES

5.3.1 Fort Ord Military Reservation

Fort Ord Military Reservation is listed as a National Priority List site and Superfund site since the base's close in the early 1990s. Potential environmental conditions across the 28,000-acre base include contaminated groundwater, unexploded munitions and ordinances, asbestos-containing construction materials, lead-based paint, and previous buried underground storage tanks. From 1986-present, numerous measures have been successfully implemented to remediate many of these RECs at Fort Ord. These efforts have included groundwater monitoring and treatment, soil excavations, geophysical surveys, and prescribed burns. Remediation efforts, however, are still ongoing at the former base.

The proposed railway alignment runs parallel along the west side of California Highway 1 from station numbers 600+00 to 370+00. This former base area was designated as Ordnance and Explosives (OE) Site 22. This 979- acre parcel does not have a history of military use of explosive or munitions on the parcel; however because of its association with the base, the EPA included a Notice of OE provision in its deed to the State of California for the parcel's use as a state park. (FOST, 2003) According to the park's website, the Fort Ord Dunes State Park has been open since March 2, 2009 and is currently open to the general public.

Copyright 2010 Kleinfelder

5.3.2 Naval Postgraduate School

The 627-acre Naval Postgraduate School (NPS) opened in 1951 to house and educate naval officers for military specialties within the service, ranging from weather research to computer science. The school replaced the former Hotel Del Monte in 1945 to support the growing need for graduate-level education that exceeded the institutes at Annapolis Naval Academy in Maryland. According to the NPS website, the campus currently has roughly 1,500 students in attendance.

The NPS is located approximately 90 feet south of the rail's alignment (Station Number 745+00). However, based on the discussions with NPS staff and review of available files, it is unlikely that NPS activities have impacted or have the potential to impact the alignment. The closest points near the previous rail were behind a walled-in landscape area to the south across Del Monte Avenue. Since the railroad was used by traveling NPS students, a concrete platform remains near the alignment as local point of interest for tourists walking the existing bike path.

5.3.3 Presidio of Monterey

According to the Presidio of Monterey's website, it was developed in 1902 by the US Army and served as a base and training grounds for numerous army infantry and cavalry regiments in Monterey. The base stretches inland from Lighthouse Avenue near the coastline to Highway 68. Today, the primary function of the Presidio of Monterey is its support of the Defense Language Institute (DLI), which serves as a foreign language training school for military linguists and currently houses approximately 3,500 students at the base.

The Presidio of Monterey is approximately 1,100 feet northwest of the alignment (Station Number 795+00), which situates it within a quarter-mile of the railway; however, there were no available records indicating the Presidio's handling or storage of hazardous materials or other RECs along the alignment. Database records indicate that the Presidio did have underground storage tanks (USTs) that have been removed in the 1990s; however, based distance and topography, it is unlikely for these activities to have impacted or to have the potential to impact the alignment.

Copyright 2010 Kleinfelder

6.0 SITE RECONNAISSANCE

Kleinfelder's assessment activities included a site reconnaissance. This section summarizes the findings from the site reconnaissance.

6.1 METHODOLOGY AND LIMITING CONDITIONS

Kleinfelder representatives Mehagan Hopkins, K. James Woodard, and Sarah Kalika conducted a limited site reconnaissance on March 2 & 4, 2010 to assess present site conditions. The entirety of the 2.7 mile segment from MP 123.3 to MP 126.0 was accessed on foot. Kleinfelder also spot checked the 12.5 mile segment from MP 110.8 to MP 123.3, which was addressed in the previous report. Spot-checking consisted of observation of the right-of-way (ROW) from adjacent roadways combined with walking of segments. Kleinfelder staff specifically re-visited areas of concern identified in the 2003 report and conducted a visual observation of conditions. Due to rainfall during the site visit, soil staining was not observable. Site conditions discussed below are limited to readily apparent environmental conditions observed on the date of site reconnaissance, subject to the limiting conditions.

6.2 SITE OBSERVATIONS - 2.7 MILE SEGMENT (MP 123.3 TO MP 126.0)

This portion of the railroad right of way is characterized by a meandering, asphalt-paved, walking/biking trail. The rails were intermittently visible adjacent to the walking/biking trail. The location of the rails alternated between east and west of the trail based on trail meanders. The trail asphalt was of sufficient thickness that rails were covered at the cross over points. The railroad tracks were observed to be in a significant state of disrepair. Ties were rarely visible and appeared to be covered in soil and vegetation. At times only one or neither of the two rails was visible. Indicators of a variety of utilities within the ROW were observed, including markers for a PG&E gas line, water lines, and sewer lines. In addition, several groundwater monitoring wells were observed, primarily in the vicinity of the former tank farm and petroleum terminal adjacent to the north of Del Monte Avenue in Monterey. These monitoring wells are related to the semi-annual groundwater monitoring program and open SLIC case for this location, discussed in Section 5.1.2.

Copyright 2010 Kleinfelder

Observed adjacent properties to this section of the proposed alignment ROW include Fisherman's Wharf, parking, open space, residential, retail, light industrial, and Roberts Lake. In general, residential and open space uses were north of the alignment with retail and light industrial uses south of the alignment. Retail uses primarily faced Del Monte Blvd, adjacent to the south of the alignment. A temporary construction yard was observed within the proposed right of way at Station 795+00, which housed a variety of equipment including a mobile generator. Fuel storage associated with the generator is considered de minimis.

6.3 SITE OBSERVATIONS (MP 110.8 TO MP 123.3)

This portion of the railroad ROW lacks a walking/biking trail as discussed above. Visual observations are discussed from north to south.

The north start of the proposed rail alignment begins approximately 900 feet north of the intersection of Del Monte Avenue and Blackie Road in Castroville, California (Station Number 5650+00 of the railroad line that extends toward Salinas). The alignment generally follows the previous rail south and crosses California Highway 183 between Stations 05+00 and Station 10+00. The rail follows the existing alignment and generally runs southwest toward the City of Marina (Stations 10+00 to 280+00).

From Castroville to Marina, the rail crosses bridges at Stations 20+00, 95+00, 110+00, 125+00, and 150+00. Based on the dates of construction and visual observations during Kleinfelder's reconnaissance, it is possible that these structures, if painted with leaded paint, may pose an environmental concern due to the cracked and flaking condition of observed paint.

A rusted 55-gallon drum was observed near Station 165+00, north of Marina. The drum was open with no observable hazardous material inside. Because of overgrown vegetation around the drum, soil staining could not be confirmed or denied based on visual inspection of surface soils around the drum.

The portion of the alignment through Fort Ord is located west of Highway 1, between Highway 1 and the shoreline. The majority of development on Fort Ord is located east of Highway 1. Potential regional concerns related to Fort Ord, based on records review and other available information, are presented throughout this report.

Copyright 2010 Kleinfelder

South of Fort Ord, the alignment is located at the northern city boundaries of Seaside and Sand City. The rail line in this area was observed in a poor state of repair, with soil and/or vegetation covering some or all the railroad ties and occasionally covering the rails. A variety of businesses were observed to be located immediately adjacent to the right of way which, based on their type, are likely to use, store or dispose of hazardous material and hazardous waste. Businesses adjacent to the proposed alignment right of way include multiple automotive service stations and repair shops.

In several locations, Kleinfelder observed adjacent properties that have expanded onto the railroad tracks, including fenced in areas north of Broadway and between Contra Costa Street and Tioga Avenue. Adjacent property owners appear to be using the ROW for storage of materials (such as at Granite Rock and Landscaping Supply) and as additional parking lots. In most cases, adjacent properties that have expanded onto the ROW have paved the alignment area and added fencing.

Kleinfelder's site reconnaissance specifically re-visited the areas of concern identified in Kleinfelder's previous Phase II ESA report from September 2003. A total of ten areas of concern were identified in the previous report. These areas, from north to south, and the current observed condition during the 2010 site visit are as follows:

Table 6.1 : Updated Areas of Concern

Identified Area of Concern (2003)	Approximate Location	2010 Observations
A dump/burn area adjacent to the alignment (Figure 1, Photo 3 and 4).	Directly adjacent to the alignment, approximately 0.5 miles northeast of the Nashua Road intersection between Castroville and Marina.	No drums or dumping were observed where previously observed in 2003.
AST's and plastic tanks possibly containing diesel fuel or pesticides (Figure 1, Photo 5).	Directly adjacent to the alignment, approximately 0.5 miles northeast of the Nashua Road intersection.	No tanks or hazardous material storage observed where previously observed in 2003.

Copyright 2010 Kleinfelder

Identified Area of Concern (2003)	Approximate Location	2010 Observations
An open area next to the alignment possibly used for storage of agriculture-related equipment.	Directly adjacent to the alignment, approximately 0.25 miles northeast of the Nashua Road intersection.	Observed vehicle parking in open area, but no agriculturally-related equipment or vehicles.
Lead paint on the Salinas River Bridge (assumed from previous study and regulatory observations)	Rail line crossing the Salinas River.	Observed at all bridges along northern half of alignment
A concrete pad with oil staining adjacent to the rail line (Figure 2, Photo 11).	Directly adjacent to the alignment, approximately 1/8-mile south of the southern end of the Salinas River overcrossing.	Site access unavailable due to weather conditions.
Buckets of unknown contents were left next to the rail line (Figure 5, Photo 25).	Directly adjacent to the alignment, approximately 50 feet south of the Playa Avenue intersection.	Buckets not observed.
Businesses with heavy equipment using the rail line as a storage area (Figure 5, Photo 26 and 27).	Directly adjacent to the alignment, approximately 0.25 to 0.50 miles southwest of the Playa Avenue intersection.	Condition persists.
Discoloration or staining along the tracks indicating spillage or dumping (Figure 5, Photo 28).	On the alignment, approximately 0.50 miles northeast of the Contra Costa intersection.	Staining not observable due to rain.
Buckets labeled solvent were left on to the rail line (Figure 5, Photo 29).	On the alignment approximately 0.25 miles northeast of the Contra Costa intersection.	Buckets not observed.
Auto maintenance facilities with waste oil drums or storage containers next to the rail alignment (Figure 5, Photo 30).	Directly adjacent to the alignment, approximately 50 feet northeast of the Contra Costa intersection.	Waste oil drums removed, waste oil AST remains at Station 668 behind an auto shop.

Copyright 2010 Kleinfelder

It should be noted that small items, including buckets, drums and debris are easily transportable and locations are subject to change. Field observations by Kleinfelder are limited to conditions observed on March 2 and 4, 2010.

Copyright 2010 Kleinfelder

7.0 INTERVIEWS

7.1 INTERVIEWS WITH REGULATORY AGENCY REPRESENTATIVES

Local government officials were contacted to obtain further information about environmental enforcement actions pending or ongoing at the site and adjacent facilities, or relevant permits (e.g. building, air quality, well abandonment, etc.) for the site and adjoining properties.

The Monterey County Environmental Health Department was contacted and available records were provided to Kleinfelder for adjacent properties along the proposed alignment. Documents provided to Kleinfelder pertained to remediation activities at Fort Ord and were not directly applicable to the area within the proposed right of way. No additional records were available for review.

Kleinfelder spoke with the Regional Water Quality Control Board about wells or other environmental issues within the scope of this assessment. In addition to files related to operations at Fort Ord, records consisted of wells drilled to monitor saltwater intrusion within a quarter mile of the coastline.

The Monterey County Agricultural Commissioner's Office was contacted for pesticide records relating to areas along the northern half of the alignment. The MCACO provided pesticide permits and pesticide usage forms dating back to 2007. Based on a review of these records, pesticides are routinely applied for the parcels between Castroville and Marina under current permits; however these pesticides are not considered environmentally persistent. No specific information related to former pesticide or herbicide applications near the alignment was noted in the available records because MCACO only keeps records for the prior three years.

Copyright 2010 Kleinfelder

8.0 CONCLUSIONS

The following potential environmental conditions were identified as having significant potential to impact the proposed restoration of the Monterey Branch Line.

8.1 ON SITE SOURCES

8.1.1 Hydrocarbon and Metal Releases From Previous Rail Operations

Leakage from running engines can over time release a significant amount of oil within the ballast material, particularly on sidings where engines idle or are parked. This waste oil may also contain heavy metals such as cadmium, chromium, copper, nickel, and lead. Over time these heavy hydrocarbons and metals may be driven by rainfall into the upper soil surface and shallow groundwater.

8.1.2 Treated Rail Ties

Rail ties are commonly treated with creosote to prevent degredation. Less commonly, and in the past, other methods of treatment included the application of arsenic-based preservatives, copper azole, and pentachlorophenol. DTSC has determined that treated wood waste (TWW) may cause an impact to soil and groundwater if not managed properly. As a result, in-place treated rail ties may impact shallow soil and groundwater from exposure to rainfall.

8.1.3 Herbicides

FRA regulations require vegetation control within 15 feet of the tracks for fire suppression. Vegetative control is commonly conducted by herbicide application using rail mounted equipment that sprays herbicides within the prescribed width. As a result, repeated application of herbicides may have resulted in an impact to soil and groundwater resources within the right-of-way.

Copyright 2010 Kleinfelder

8.2 OFF-SITE SOURCES

8.2.1 Dole Processing Plant Along the Alignment

The Dole Processing Plant is located adjacent to the alignment (north of Marina). Although no spills, leaks, or USTs were reported by EDR, several areas of dumping were observed during the site reconnaissance. One open, rusty 55-gallon drum was observed along the eastern side of the alignment. The contents of the drum are unknown, however a tree was observed to be growing through the drum, indicating that vegetation in the area is not likely stressed due to the former contents of the drum.

8.2.2 Potential Disposal Areas behind Auto Shops

Numerous auto repair, tire shops, car dealers, and commercial and industrial businesses were observed within fifty feet of the alignment in the areas of Sand City / Seaside and Monterey. Historically, auto repair facilities use and dispose of hazardous substances related to their operations. Based on site observations, potential disposal and dumping behind the businesses, adjacent to the rail line may pose a concern to shallow soil within the right of way.

8.2.3 Petroleum Hydrocarbons in Soils and Groundwater at former Bulk Terminal Area

According to database findings and historical research a crude oil and refined petroleum bulk terminal previously operated immediately north of the alignment within the City of Monterey at approximately Section 705+00 to 714+00. The tank farm and terminal were constructed in 1926 and operated until 1976. This tank farm formerly included six 80,000-barrel (3,360,000-gallon) crude oil and light crude oil tanks, one 2,960,000-gallon gasoline tank, one 315,000 gallon crude balance tank, and an oil warehouse/loading area. The tanks were removed from 1983 through 1996. According to information reviewed on the State Water Resources Control Board Geotracker website, product was applied to the sand dune area to stabilize the sand and prevent corrosion of the bottom of the tanks. This property is currently monitored semi-annually and is listed on the SLIC database do to the presence of petroleum hydrocarbons within groundwater. Kleinfelder reviewed the most recent semi-annual report, prepared by SAIC and dated July 15, 2009, which indicated that a plume of petroleum-affected groundwater exists beneath the railroad right of way and across Del Monte Avenue to

Copyright 2010 Kleinfelder

the south. It is possible that residual petroleum hydrocarbons are also present within shallow soils beneath the proposed rail line.

8.2.4 Lead-based Paints on Existing Rail Structures

According to the Bridge Strategy Report for Monterey Peninsula Fixed Guideway Corridor Study report, by Parsons, dated July 2005, three types of bridges currently exist along the proposed alignment. Steel structures, such as the Salinas River Bridge, as well as painted components of the concrete bridges or timber trestles potentially have been painted using lead-containing or lead-based paints. Over time and exposure to weather, these paints may degrade and fall onto soil. It is possible that elevated lead concentrations may remain in soils near these structures.

8.2.5 Buried Utilities Along the Alignment

Based on site observations and discussions with Cal-American Water, California Water, and the Marina Coast Water District, various water-related utility chases (piping, storm water drains) intersect the proposed alignment. Locations should be verified prior to any subsurface construction within the proposed alignment.

Pacific Gas & Electric maintains subsurface electrical and natural gas pipelines alongside the segment of alignment that extends from Marina to Monterey. The approximate location of the natural gas pipeline is identified by PG&E markers along the alignment; however subsurface electrical corridors are not identified. Locations should be verified prior to subsurface construction within the proposed alignment.

8.2.6 Flange Lubricators

Although not observed during the site reconnaissance, many railroads use automatic flange lubricators to prevent flange and rail wear at curves. The lubricators commonly consist of a metal box adjacent to the tracks filled with grease, and a pump system that extrudes the grease as the rail cars travel over it. Over time, a significant amount of grease can be released to the soil, particularly if the lubricators are not maintained properly.

Copyright 2010 Kleinfelder

8.4 DEVIATIONS AND ADDITIONAL SERVICES

The scope of this report does not incorporate non-scope considerations, such as asbestos/lead-based paint, radon, lead in drinking water, wetlands, regulatory compliance, cultural and historical resources, industrial hygiene, health and safety, ecological resources, endangered species, high voltage power lines, indoor air quality, and therefore vapor intrusion as a contributing indoor air quality issues.

8.5 DATA GAPS

Although Kleinfelder attempted to obtain reasonably ascertainable information regarding the site, some information was either not received or not readily available at the time of this report. The following data failures (data gaps) have been identified:
Kleinfelder did not attempt to determine the location of orphan sites for which EDR reported an address. Orphan sites without address information are not practically reviewable.

Kleinfelder did not interview adjacent property owners.

Based on a review of the data gaps presented above, it is Kleinfelder's opinion that the data failures have not affected the identification of potential environmental conditions related to the proposed alignment.

Copyright 2010 Kleinfelder

9.0 POTENTIAL IMPACTS

The purpose of this preliminary assessment of the rail corridor is to identify potential environmental conditions related to chemical releases or spills to soil or groundwater, in support of the Environmental Impact Report being prepared to assess potential impacts related to the restoration of the Monterey Branch Line for the entire 15.2 mile proposed segment from Castroville to Monterey.

The LRT Alternative indicates that the MBL railroad track would be restored or constructed between downtown Monterey and north Marina. Because construction plans have not been completed for the project, Kleinfelder assumes that restoration and construction along the corridor involves the following activities:

9.1 TRACK WORK

This activity includes maintenance and repair work that may be required on the track. The work may involve rail removal and replacement, removal and replacement of deteriorated ties, grading and replacement of lost ballast and soil substructures and removal of vegetation (brushing) that has encroached on the railroad. Construction activities will typically be conducted from the rail with rail-mounted equipment or from within the railroad right-of-way or access. It is assumed that Best Management Practices (BMPs) will be employed to minimize the effects of this work and agency approvals and permits will be obtained as necessary.

9.2 CULVERT WORK

Culverts of various sizes carry storm water either through or off of the railroad right-of-way. If repair work is required on the culverts, it typically will occur in the dry season. There may be the need to remove vegetation, soil and other debris that affects their proper functioning. Excavation for removal and replacement of culverts will typically occur in already disturbed areas within the railroad right-of-way. It is assumed that BMPs will be employed to control sediment and to minimize the effects of this activity and agency approvals and permits will be obtained as necessary.

Copyright 2010 Kleinfelder

9.3 BRIDGE WORK

The bridges along the corridor are composed of wood, steel in the case of the Salinas River bridge, and concrete with some steel in the case of the Roberts Lake bridge. For the purposes of this assessment, it is assumed that typical bridge repair work will be generally minor in nature and may involve the replacement of one or more bridge components such as decking, deck ties and timber guards, struts, bents, bracing, handrails and piles. Piles that may have deteriorated will be cut aboveground or above the waterline and spliced with a replacement pile. Work will usually be done from the rail with rail-mounted equipment. The work will be performed during the dry months so that the work can be conducted out of the water. If there is a need to repair a pier and a creek or water way is flowing, especially for those bridges that are over water courses that do not experience a dry season, permits will be pursued with the necessary agencies. BMPs will be employed at the appropriate instances to minimize the effects of the bridge activity and agency approvals and permits will be obtained as necessary.

9.3.1 New Construction

For the purposes of this assessment, it is assumed that new construction will involve relatively minor grading not to exceed three feet in depth, no construction of new bridges, installation of new culverts will occur in the dry season, and groundwater will not be encountered. No structures will be demolished to clear the right-of-way, and all work will be conducted using rail mounted equipment or along the right-of-way. Ballast and sub ballast will be imported from a documented quarry source, and agency approvals and permits will be obtained as required.

Impacts were identified and assessed by comparing railroad rehabilitation elements with significance criteria developed for this assessment. Impacts on the environment were considered significant if the assumed rehabilitation activities would:

- Create a significant hazard to the public or the environment through the routine transport, use or disposal of hazardous materials and waste;
- Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials and waste into the environment.

Copyright 2010 Kleinfelder

Based upon the findings in this preliminary assessment and a review of the assumed rehabilitation activities, Kleinfelder has identified several potential impacts to human health and the environment that may require mitigation. Because chemical analysis of soil and paint on the Salinas River bridge or metal components of the Roberts Lake bridge has not been conducted, and construction plans showing specific locations and depths of grading have not been finalized, these potential impacts are considered preliminary. Therefore, these potential impacts should be used to identify further assessment that should be conducted to provide a basis for impact analysis and to prescribe mitigations in the EIR.

Impact 1: Chemically impacted soil may be disturbed during rehabilitation of existing track or grading during the placement of new track. Handling of this soil without appropriate training or engineering controls may cause exposure to workers or the public. Mismanagement of impacted soil may cause a release to soil and groundwater on or off the right-of-way, and to surface water resources where construction occurs near creeks, streams, or the Salinas River.

Impact 2: Assuming that paint on the Salinas River and Roberts Lake bridge contains lead, repair activities could cause unacceptable exposure to workers if any of the Cal/OSHA 'trigger tasks' are employed. Additionally, removal of lead-containing paint, if conducted by untrained workers and without appropriate control methods, may cause a release to the Salinas River or Roberts Lake, impacting biological resources on and off-site.

Impact 3: Rehabilitation of the rail line may generate hazardous waste requiring proper management and disposal. One potentially hazardous waste identified in this assessment is the rail ties and timbers from bridges, which are considered Treated Wood Waste by DTSC and require special handling.

Copyright 2010 Kleinfelder

10.0 RECOMMENDATIONS

Based on the findings of this preliminary assessment and review of the anticipated rehabilitation activities, Kleinfelder recommends that the following additional assessments be conducted to adequately assess impacts, prescribe mitigations, and provide information required to safely conduct rehabilitation in accordance with state and Federal environmental regulations:

- Once the construction plans showing the depth and extent of excavation are completed, Kleinfelder recommends that a targeted soil and possibly groundwater investigation be conducted to assess the magnitude and extent of chemical impacts from on and off-site sources.
- If treated rail ties will be removed and disposed of, adequate testing of a representative sample lot should be conducted to document that ties are not hazardous waste.
- If activities on the Salinas River and Roberts Lake bridges will disturb paint, a lead-based paint survey of the bridge should be conducted to allow compliance with Cal/OSHA regulations.
- If any structures are to be renovated demolished, an asbestos and lead paint survey should be conducted for compliance with NESHAP regulations and air district rules.

In addition, Kleinfelder recommends that the following plans and documents be prepared for compliance with state and Federal regulations, and to help mitigate impacts related to the disturbance, handling, and disposal of chemically impacted materials:

- A TAMC Best Management Practices (BMP) manual outlining all BMPs that contractors must employ during construction.
- Soil and Groundwater Management Plan identifying the methods and procedures required to handle, store, transport, and dispose of chemically impacted soil and groundwater.

Copyright 2010 Kleinfelder

- Rail Tie Management Plan, identifying the procedures used to comply with DTSC's Treated Wood Waste regulations.
- Storm Water Pollution and Prevention Plan (SWPPP) for construction.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

The Map ID column refers to the Map ID-Focus Map(s) of the listed site.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 12/01/2009 has revealed that there is 1 NPL site within the searched area.

Site	Address	Map ID

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 06/30/2009 has revealed that there is 1 CERCLIS site within the searched area.

Site	Address	Map ID
USARMY FORT ORD	***DIR ENGR HOUSING AFZW***	***0-11,12,14,15,16,17,18,21,22,23,27***

EXECUTIVE SUMMARY

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 06/23/2009 has revealed that there is 1 CERC-NFRAP site within the searched area.

Site	Address	Map ID
US NAVY NAVAL POST GRADUATE SC	***1 UNIVERSITY CIR***	***163-25***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/11/2009 has revealed that there is 1 CORRACTS site within the searched area.

Site	Address	Map ID
USARMY FORT ORD	***DIR ENGR HOUSING AFZW***	***0-11,12,14,15,16,17,18,21,22,23,27***

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 01/13/2010 has revealed that there is 1 RCRA-TSDF site within the searched area.

Site	Address	Map ID
USARMY FORT ORD	***DIR ENGR HOUSING AFZW***	***0-11,12,14,15,16,17,18,21,22,23,27***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 01/13/2010 has revealed that there are 6 RCRA-LQG sites within the searched area.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 01/13/2010 has revealed that there are 72 RCRA-SQG sites within the searched area.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 01/13/2010 has revealed that there are 12 RCRA-NonGen sites within the searched area.

STATE AND LOCAL RECORDS

HIST Cal-Sites: Formerly known as ASPIS, this database contains both known and potential hazardous substance sites. The source is the California Department of Toxic Substance Control. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

A review of the HIST Cal-Sites list, as provided by EDR, and dated 08/08/2005 has revealed that there is 1 HIST Cal-Sites site within the searched area.

Site	Address	Map ID
EMBASSY SUITES HOTEL	***1441 CANYON DEL REY BLV***	***117-26***

SCH: This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category. depending on the level of threat to public health and safety or the. environment they pose.

A review of the SCH list, as provided by EDR, and dated 02/08/2010 has revealed that there is 1 SCH site within the searched area.

Site	Address	Map ID
CENTRAL COAST HIGH SCHOOL EXPA	***2995 RENDOVA ROAD***	***53-15***

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 02/22/2010 has revealed that there are 3 SWF/LF sites within the searched area.

DEED: The use of recorded land use restrictions is one of the methods the DTSC uses to protect the public from unsafe exposures to hazardous substances and wastes .

A review of the DEED list, as provided by EDR, and dated 12/15/2009 has revealed that there is 1 DEED site within the searched area.

Site	Address	Map ID
EMBASSY SUITES HOTEL	***1441 CANYON DEL REY BLV***	***117-26***

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, and dated 12/22/2009 has revealed that there are 9 DRYCLEANERS sites within the searched area.

EXECUTIVE SUMMARY

CDL: A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

A review of the CDL list, as provided by EDR, and dated 12/31/2009 has revealed that there is 1 CDL site within the searched area.

Site	Address	Map ID
ILLINOIS TOOL WORKS	***709 CALIFORNIA STREET***	***87-21,26***

RESPONSE: Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

A review of the RESPONSE list, as provided by EDR, and dated 02/08/2010 has revealed that there is 1 RESPONSE site within the searched area.

Site	Address	Map ID
EMBASSY SUITES HOTEL	***1441 CANYON DEL REY BLV***	***117-26***

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency

A review of the HAZNET list, as provided by EDR, and dated 12/31/2008 has revealed that there are 251 HAZNET sites within the searched area.

HAULERS: A listing of registered waste tire haulers.

A review of the HAULERS list, as provided by EDR, and dated 01/11/2010 has revealed that there are 2 HAULERS sites within the searched area.

Site	Address	Map ID
RANDAZZO ENTERPRISES, INC.	***13550 BLACKIE ROAD***	***1-5***
FRANCISCO CALDERON	2240 DEL MONTE AVENUE	127-26

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 02/08/2010 has revealed that there are 6 ENVIROSTOR sites within the searched area.

HWT: A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous waste transporter registration is valid for one year and is assigned a unique registration number.

A review of the HWT list, as provided by EDR, and dated 01/18/2010 has revealed that there is 1 HWT site within the searched area.

Site	Address	Map ID
RANDAZZO ENTERPRISES, INC.	***13550 BLACKIE ROAD***	***1-5***

PROC: A listing of certified processors.

A review of the PROC list, as provided by EDR, and dated 12/18/2009 has revealed that there are 3 PROC sites within the searched area.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there are 3 Manufactured Gas Plants sites within the searched area.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Date form received by agency: 03/02/2004
Facility name: ULTRA PURE SOLUTIONS
Classification: Large Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D035
Waste name: METHYL ETHYL KETONE

Waste code: F003

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Reclamation:	Not reported
POTW:	Not reported
Treat To Water:	Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity:	Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Summary Details:

Conditions at proposal July 14, 1989): Fort Ord covers 46 square miles on Monterey Bay approximately 5.6 miles north of Monterey, Monterey County, California. The installation is bordered by the City of Marina and the Salinas River to the north, El Toro Creek to the east, Seaside and Del Rey Oaks to the south, and Monterey Bay to the west. Fort Ord was established in 1917 as a maneuver area and field artillery target range for units then stationed at the Presidio of Monterey. Its primary mission now is training. Industrial operations at Fort Ord include vehicle maintenance areas, a battery charging/repair facility, photographic processing laboratories, spray painting operations, a plastics shop, laundry/dry cleaning facilities, vehicle wash racks, and a small arms repair shop. Chemicals and ha ardous wastes were managed and disposed of at Fort Ord. According to tests conducted by the Army in 1986, elevated levels of contaminants were detected in off-base ground water. The contamination is emanating from the base and may be contaminating the drinking water supplies of the City of Marina; however, the exact location of the source has not yet been identified. The contaminants includecarbon tetrachloride, tetrachloroethylene, trichloroethylene, 1,1,1-trichloroethane, and trans-1,2-dichloroethylene. An estimated 38,600 people obtain drinking water from wells within 3 miles of ha ardous substances on the fort. Ground water is also used for irrigation. In addition, soil and ground water are contaminated at the Fire Drill Area, where approximately 600 gallons of petroleum products have been spilled. Fort Ord has identified at least 18 other contamination problems.Fort Ord is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part of IRP, theArmy is implementing a sampling plan to investigate ground water contamination. The Army is treating contaminated soil and ground water at nearby Frit sche Army Airfield Fire Drill Area. Status February 21, 1990): IRP activities continue.

Site Description: The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. Environmental investigations began at Fort Ord in 1984 under the Regional Water Quality Control Board (RWQCB) cleanup or abatement orders. In 1986, further investigations began at Operable Unit 2 (OU2). In 1990, Fort Ord was placed on the National Priorities List (NPL) because of Volatile Organic Compounds (VOCs) found in ground water beneath OU2. A Federal Facility Agreement (FFA) was signed in 1990 by the Army, U.S. Environmental Protection Agency, the California Environmental Protection Agency's Department of Toxic Substances Control (DSTC)

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and Regional Water Quality control Board (RWQCB). The FFA established schedules for commencing Remedial Investigations and Feasibility Studies (RI/FS). In 1991, the basewide RI/FS began and Fort Ord was placed on the Base Realignment and Closure list. The final FS for OU2 was completed on October 1, 1993, and the Record of Decision (ROD) was signed in August 1994. An Interim Action Plug-In ROD was signed in March 1994 for excavation and treatment of shallow contaminated soils. The Draft and Draft Final Versions of the Basewide RI/FS were completed in August 1994 and December 1994, respectively.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Del Rey Oaks to the south and Marina to the north. The Southern Pacific Railroad and Highway 1 pass through the western portion of former Fort Ord, separating the beachfront from the rest of the base. Laguna Seca Recreation Area and Toro Regional Park border former Fort Ord to the south and southeast, respectively, as well as several small communities such as Toro Park Estates and San Benancio.There are three main developed areas within Fort Ord: the Main Garrison, the East Garrison and Fritzsche Army Airfield (FAAF). The Main Garrison contains commercial, residential, and light industrial facilities. The East Garrison occupies 350 acres on the northeastern edge of the base and consists of military and industrial support areas, recreationalfacilities, and recreational open space. The FAAF serves as the general airfield for Fort Ord. EPA placed the site on the National Priorities List in 1990. Several areas of contamination exist on site. Generally, chemicals present in soil are the result of former routine maintenance and support activities on Fort Ord. Such activities include: maintenance of military vehicles at wash racks, tank storage of chemicals such as waste oil, the use of oil/water separators in drainage areas, and pesticide use and storage. The facility contained leaking petroleum underground storage tanks, containers of waste oil and various automotive chemicals, chemical storage areas, oil-waste separators, target ranges, and landfills. One on-site area is a 150-acre landfill that was primarily used to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Recordof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms target ranges. Over 12,000 acres are suspected of containing ordnance and explosives (OE). In particular, the 8,000 acre Multi-Range Area (MRA) is known to contain dangerous unexploded ordnance. OE investigations are complicated by technological limitations and protected habitat that covers the area and requires special management pursuant to the base Habitat Management Plan (HMP). This includes the current requirement to use prescribed burns to clear vegetation prior to OE removal. The HMP currently restricts burns to 800 acres/year, thus requiring at least 10 years to address OE in the MRA.The aquifers at the site are called the upper aquifer and the 180-foot aquifer. Approximately 40,000 people obtain drinking water from wells located within 3 miles of the site.Since opening in 1917, Fort Ord served as a training and staging facility for Army infantry troops. No permanent improvements were made until the late 1930s when administrative buildings, barracks, mess halls, tent pads, and a sewage treatment plant were constructed. The Main Garrison was constructed between 1940 and the 1960s, starting in the northwest corner of the base and expanding southeastward. The FAAF was incorporated into Fort Ord in 1961. Since 1917, portions of the Installation were used by infantry units for maneuvers, target ranges, and other purposes. Ordnance and explosives (OE) that have been fired into, fired upon, or used on the facility include artillery and mortar projectiles, rockets

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and guided missiles, rifle and hand grenades, practice land mines, pyrotechnics, bombs, and demolition materials. A wide variety of conventional OE items have been located at sites throughout the former Fort Ord, including pyrotechnics and explosives.Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented in preparation for transfer and reuse of former Fort Ord property. The Ord Military Community, located within the Main Garrison portion of former Fort Ord, will be retained by the Army. Since base closure in September 1994, lands outside the Ord Military Community have been subjected to the reuse process. Some of the property on the installation has been transferred. A large portion of the Inland Training Ranges was assigned to the Bureau of Land Management (BLM). The other major recipient of Fort Ord property has been the California State University (CSU) system. The CSU Monterey campus is located on the site of the former Fort Ord and is expected to expand in the future. Other areas on the installation have been or will be transferred to federal, state, local, and private entities through economic development conveyance, public benefit conveyance, negotiated sale, or other means.The reuse of the former Fort Ord following transfer of property increases the possibility of the public beingexposed to explosive hazards. In November 1998, the Army agreed to evaluate OE at former Fort Ord in an OE Remedial Investigation/Feasibility Study (RI/FS) consistent with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). A Federal Facility Agreement (FFA) was signed in 1990 by the Army, EPA, and the California Environmental Protection Agency's Department of Toxic Substances control (DTSC; formerly the Department of Health Services or DHS). The FFA established schedules for performing remedial investigations and feasibility studies and requires that remedial actions be completed as expeditiously as possible. In April 2000, an agreement was signed between the Army, EPA and DTSC to evaluate OE at theformer Fort Ord subject to the provisions of the Fort Ord FFA.EPA OU-01: Fritzsche Army Airfield Fire Drill AreaAn investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wassigned in September 1995. Groundwater cleanup standards were established in the ROD which must be met through the existing pump and treat system. The selected remedy is consistent with the initial action described above. The groundwater treatment system was installed in 1988. In 2004, the Army awarded a fixed price contract for the management and completion of the groundwater cleanup remedy at Operable Unit 1.EPA OU-02: Fort Ord LandfillOne on-site area is a 150-acre landfill that was primarilyused to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Record of Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed.The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. In 1994, the Army completed an investigation focusing on groundwater andsoil contamination originating from the landfill. A Record of Decision (ROD) was signed in August 1994. The ROD included capping the landfill and installing a groundwater pump and treatment system. Construction of the groundwater treatment system is complete and is operational.In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

provide more clean land for re-use. The changes are documented in the Explanation of Significant Differences (ESD) in August 1996.The consolidation is complete and capping of the main landfill was completed in December 2002. The Army has installed an active landfill gas extraction and treatment system to capture and remediate methane andother volatile organic compound gases that are being generated by decaying materials in the landfill. The Army continues to monitor landfill gases to ensure that do not pose a health hazardEPA OU-03: Overall SiteIn 1990, the Army began further investigations into the nature and extent of on- and off-site soil and groundwater contamination, as well as any ecological or health threats that may be present. The investigation identified three waste disposal sites, firing ranges, and a vehicle maintenance area that require extensive cleanup actions. The Army completed the RI/FS and ROD in 1997, and all soil cleanup actions are complete, and groundwater pump and treatment systems are operational. The action included remediating the Sites 2/12 maintenance/disposal area by soil excavation and ongoing groundwater remediation, Sites 16/17 disposal area by soil excavation, Site 31 disposal area by soil excavation, and Site 39 small arms ranges by soil excavation. Most of the excavated soils were placed at the Fort Ord Landfill, which was closed in December 2002. The Army is currently evaluating treatment/disposal options for additional Site 39 soils to be excavated.Site 39, which includes the Multi-Range Area (MRA), was reportedly used sincethe early 1900s for small arms training and ordnance training exercises, including onshore naval gunfire. Over the years, in addition to small arms rounds, various types of ordnance have been used or found in the MRA, including hand grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, petroleum hydrocarbons, and other metals associated with training activities. Ordnance is being addressed through other remedial or removal actions.Site 39 comprises approximately 8,500 acres in the southern portion of Fort Ord. Site 39 is bounded byEucalyptus Road to the north, Barloy Canyon Road to the east, Boundary Road and South Boundary Road to the south, and General Jim Moore Blvd to the west.Results of the RI indicate the metals lead and beryllium, explosive compounds, and organic compounds are present in shallow soil above background concentrations in localized areas at Site 39, and are associated with past military training activities.Spent ammunition found at the Small Arms Ranges consists of bullets, black powder rifle balls, and lead shot. Lead is the primary chemical of concern in soil at the Small Arms Ranges at Site 39. In localized areas, spent ammunition is found on the ground surface.An Explanation of Significant Differences addressing OU 3 was completed in December2003.EPA OU-04: Surface SoilsEPA OU-05: No Action SoilsEPA OU-07: Site 3 Beach RangeSite 3 is situated within about 3.2 miles (780 acres) of dunes along the coastline of Monterey Bay at the western boundary of Fort Ord. Results of the investigation indicate lead from small arms is the main contaminant at the site. The site is also home of the Smith's Blue butterfly, an endangered species, and buckwheat plants which the butterflies use to lay their eggs on. In 1997, the Army completed a ROD allowing them to first clean up the lead contamination to address human health concerns by soil excavation and placement in the Fort Ord Landfill, which was simultaneously being remediated (capped). This cleanup was completed in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well.EPA OU-08: OE Track 0 (No Further Action)The Track 0 process addresses single or grouped areas of land at the former Fort Ord that have no history of OE-related use and for which No Action is necessary to protect human health and the environment. These areas consist largely of land that has been developed for military support or residential use throughout Fort Ord's history and areas

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

that have no physical or documented evidence of OE-related training. A Track 0 Special Case area includes a former landfill where OE scrap items were found buried with refuse. No OE-related activities occurred in the area and the OE scrap items and the refuse were entirely removed.Track 0 areas were grouped geographically: e.g., all non-OE land in the Main Garrison was grouped and discussed together as one area. Track 0 includes parcels in the following areas:- Highway 1 Area- Golf Course Maintenance Area- Brostrom Park Area- Patton/Abrams Park Housing Area- Open Space, Main Entrance Area- Surplus II Area- Fritzsche Army Airfield Area- East Garrison Area- Main Garrison Area- OU 2 Landfill Area- Reservation Road AreaTrack 0 sites were addressed by a No Further Action Record of Decision (ROD) dated July 2, 2002.The Army has been conducting military munitions sampling and removal actions at identified Munitions Response Sites (MRS) and will continue these actions to mitigate imminent MEC-related hazards to the public while gathering data about the type of military munitions and level of hazard at each of the sites for use in the base-wide MR RI/FS. The Army is performing its activities pursuant to the President's authority under the CERCLA Section 104, as delegated to the Army in accordance with Executive Order 12580 and in compliance withthe process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will continue to be involved. The Army is preparing the MR RI/FS for Fort Ord to address MEC-related hazards. The MR RI/FS will review and evaluate past investigative and removal actions, as well as recommend future response actions deemed necessary to protect human health and the environment on the basis of proposed reuses specified in the Fort Ord Reuse Authority (FORA) Reuse Plan.The information to be evaluated during the MR RI/FS will include site knowledge, the quality of the available information,work completed, and intended future land uses. The base-wide MR RI/FS will contain a comprehensive evaluation of all MEC-related data for the entire former Fort Ord and will evaluate long-term response alternatives for cleanup and risk management ofMEC.The MR RI/FS is organized as a "tracking" process whereby sites with similar characteristics will be grouped to expedite cleanup, reuse, and/or transfer based on current knowledge. The Track 0 Record of Decision (ROD) addresses areas on the former Fort Ord that have been identified as requiring no munitions response to protect human health (public safety) and the environment (Track 0 areas). Other Track (1 through 3) areas will be addressed separately for the other lands that have or are suspected to have a history of military munitions-related use and investigations completed to date. Track 1 sites were suspected to have been used for training with military munitions but for which no further response action is required because they fall into one of the three categories defined in Record of Decision, No Further Action Related to Munitions and Explosives of Concern-Track 1 Sites; No Further Remedial Action with Monitoring for Ecological Risks from Chemical Contamination at Site 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are known or suspected to be present, but MEC investigations have not yet been completed.All base-wide MR RI/FS documents have been or will be prepared in cooperation with the EPA and DTSC in accordance with the Fort Ord FFA; made available for public review and comment; and placed in the Administrative Record and local information repositories.A ROD addressing OU 8 was completed in 2002. An Explanation of Significant Difference (ESD) pertaining to the OU8 ROD was completed in April of 2005.EPA OU-09: OE Track 1Track 1 sites are sites where munitions and explosives of concern were suspected but no further remedial action was deemed necessary to protect human health and the environment. The Track 1 Proposed Plan was issued for public comment on September 15, 2004 and

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the ROD is scheduled to be signed in 2005.EPA OU-10: OE at Ranges 43-48, Range 30A, and Site OE-16Ranges 43-48 cover approximately 498 acres to the south of Eucalyptus Road in the south-central portion of the former Fort Ord. The majority of the site is designated as habitat reserve and will remain undeveloped (473 acres), and a limited portion of the site (25 acres) will be developed and reused.These ranges were part of the former Fort Ord's Multi-Range Area (MRA) and are categorized as firing ranges where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Ranges 43-48 mainly consists of central maritime chaparral (CMC)with some grassland areas.Training facilities maps indicate these ranges were used for a variety of live fire exercises from the 1940s through the 1990s. Records and recent field investigations indicate the ammunition used at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitank weapon (LAW); small arms; practice anti-personnel mines; dragon guided missiles; practice claymore mines; and fragmentation hand grenades.The former firing ranges contain sensitively fuzed, highly dangerous OE present on the ground surface or at shallow depths below the ground. As described above, numerous types of OE ranging from hand grenades to 90mm recoilless rifle rounds are known or suspected to be on the site. During recent limited surface removals in 2001, thousands of OE items were recovered at Ranges 43-48.This Interim Action site is adjacent to (less than 4,000 feet from) residential neighborhoods at Ord Military Community (Fitch and Marshall Parks) and is near the City of Seaside. The Fitch and Martin Luther King Jr. Middle Schools are located less than a mile from Ranges 43-48. Existing site security measures include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In the last three years, five documented incidents of persons trespassing into the Ranges 43-48 site occurred. In 1999, there were two documented cases of children entering the fenced MRA at Ranges44 and 45, and collecting and removing 40mm practice grenades found on the ground surface. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The majority of this Interim Action site is designated as habitat reserve and will remain undeveloped. Future reuse of Transfer Parcel E21b.3 is development.Range 30A includes approximately 388 acres located in the southeastern portion of the MRA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerFort Ord MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Range 30A mainly consists of CMC with somegrassland areas.Range 30A was constructed in 1990 as a 40mm machine gun range and was in use until 1993. According to the Fort Ord Training Ranges Standard Operating Procedure (SOP), the only weapon authorized for use at Range 30A from 1991 and 1992was the MK19 40mm machine gun, Mod 3. Ammunition authorized for use at Range 30A included HE, high explosive dual purpose (HEDP) and target practice (TP).Range 30A is known to contain sensitively fuzed, highly dangerous 40mm grenades and evidence of60mm and 81mm mortars and 37mm, 75mm, 155mm, and 8-inch projectiles. Limited surface removals in 2001 in the accessible areas of Range 30A have recovered hundreds of whole or partial OE and OE scrap items.The Range 30A Interim Action site is locatedin close proximity (approximately 2,200 feet north) to the Laguna Seca residential area and Laguna Seca Golf Course, and less than a mile from the Laguna Seca Raceway.

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

South Boundary Road, located approximately 2,000 feet to the south, is open to vehicular traffic during events at Laguna Seca Raceway and is always open to the public for jogging, hiking, and biking. This range was part of the former Fort Ord's MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Existing access deterrents include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), and three other incidents of fence damage were reported within 4,000 feet of the range (near Range 29). Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.As part of the closure of the former Fort Ord, the MRA will be transferred to the BLM and most of the MRA will remain undeveloped as habitat reserve. The habitat management plan (HMP) presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.Site OE-16 includes approximately 80 acres located immediately north of the former Fort Ord MRA, between Eucalyptus and Parker Flats roads and bounded by Watkins Gate Road to the east (Plate 5). This site will become habitat reserve and will remain undeveloped. The Bureau of Land Management (BLM) land (immediately adjacent) is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence. The site is posted with signs warning of the dangers associated with unexploded ordnance. Vegetation at Site OE-16 mainly consists of CMC with some grassland areas.Site OE-16 is a World War II (WWII) era rocket range, and is identified as a "bazooka practice" area on Fort Ord Training Facilities maps dating from 1945 and 1946. Available training maps after 1946 do not identify the bazooka practice area. According to Fort Ord Range Control, this range was probably used as an antitank rocket range during and shortly after WWII. Available information indicates that Site OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site was later used for a portion of time as an anti-armor training area. Evidence from the site indicates that both practice and HEAT rounds were used.Site OE-16 contains sensitively fuzed, highly dangerous OE, such as HEAT projectiles, present on the ground surface or at shallow depths below the ground. During recent limited surface removals in 2001, hundreds of OE items, including expended and live 2.36-inch rockets (practice and HEAT), practice antitank mines, rifle grenades, hand grenade fuzes, and OE scrap were recovered.Site OE-16 is located adjacent to the MRA and land that has been transferred to the BLM. The BLM land is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence posted with signs warning of the dangers associated with unexploded ordnance. The site is in close proximity to a residential neighborhood (Fitch Park) on the former Fort Ord. In 2001, an incident of persons trespassing withinthe MRA adjacent to Site OE-16 was reported. In addition, five incidents of trespassing into the MRA adjacent to Site OE-16 occurred within the last three years. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The land that includes Site OE-16 will be transferred to the BLM and will remain undeveloped as habitat reserve. The HMP for former Fort Ord presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.An Interim Action Record of Decision addressing OE at EPA OU-10 was signed in September 2002.The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acres was burned. The Army is studying the October 2003 burn to understand both what went right and what went wrong. Ordnance has been cleared from the surface of the entire burned area and subsurface clearance is ongoing. The next prescribed burn is scheduled to take place in 2005.OU-10 Track 2 Sites:Track 2 sites are sites where munitions and explosives of concern were found and a removal action was conducted to clean it up. The first of several Track 2 RI/FS reports is due to be issued in 2005 for the area of Fort Ord known as Parker Flats.EPA OU-11: OE Track 3Track 3 sites are sites where munitions and explosives of concern are known to be present but no cleanup has been conducted yet. The final Track 3 ROD is expected to be completed by 2007, with UXO cleanup work continuing for at least 10 years thereafter.EPA OU-12: Carbon Tetrachloride PlumeThe Army has initiated a remedial investigation/feasibility study of another area of groundwater contamination, the so-called "carbon tetrachloride plume operable unit", near the City of Marina. Contaminants slightly above regulatory standards have been found in offsite groundwater. This area of contamination is not being used for drinking water. Potential source areas are also being investigated. A soil vapor sampling and extraction system pilot study was conducted in 2004 to address the vadose zone above the carbon tetrachloride plume area. The pilot study was very successful and appears to have removed significant mass from the vadose zone. The Army expects to complete the draft Remedial Investigation/Feasibility Study Report for the carbon tetrachloride plume operable unit in 2005.OU 9:A list of the 21 Track 1 sites for which No Further Action Related to MEC is required is comprised of:MRS-1-Flame Thrower Range: The site is 25 acres in size, and is located in the northwestern part of former Fort Ord. MRS-1 is currently occupied by housing. Proposed reuse plans include residential development. Based on the literature review and sampling, the site appears to have been used for camouflage training, mine and booby trap training, non-firing mortar training, and flame thrower training. Most of this area has been used for military housing for over 40 years.MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housing. The site is currently undeveloped with proposed reuse plans to include development with reserve areas or development with restrictions. Review of training maps, aerial photographs, and other Fort Ord maps indicate mine and booby trap training occurred at the site. The adjacent areas have been used as a school and military housing for over 40 years.MRS-13A-Practice Mortar Range: The site is 61 acres in size, and is located in the northern portion of the former Fort Ord. Proposed reuse plans for MRS-13A include residential development and a park. The majority of the site has contained residential housing for nearly 30 years. The area was extensively graded in the 1970s and housing was built on portions of the site. The western portion of the site was used as a landfill in the 1960s. All landfill material in the western portion of MRS-13A was excavated (removed) and transported tothe main landfill south of Immix Road in the 1990s. Several munitions debris items and three unexploded ordnance (UXO) items were identified within and adjacent to MRS-13A during landfill excavation and housing development grading activities and were removed: three live ground signals and loose pyrotechnic material; three inert hand grenade primer detonators; two inert 40mm signal cartridges; an inert fin assembly for a 3.5-inch rocket; a live rifle grenade; miscellaneous projectiles; and two inert 3.5-inch rocket motors.MRS-20-Recoilless Rifle Training Range: The site is 7 acres in size, and is located in the southwestern portion of the Main Garrison near residential housing and Highway 1. This site is currently open space with

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

proposed reuse plans, which include development. The site was identified as a potential Recoilless Rifle Training Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in some cases, could be fired by either method.MRS-22 (Site 3)-Beach Trainfire Ranges: The site is 952 acres in size, and is located on the Monterey Baycoastline along the western margin of former Fort Ord as shown on Plate 2. The site is currently open space with the proposed reuse of the site to include a State park with open space and recreational areas. Training maps, aerial photographs, and interviews indicate the site was used as the Beach Trainfire Ranges from 1940s until base closure in 1994. The ranges contained 17 small arms firing ranges; an obstacle course; a bivouac area; a rifle instruction circle; a bayonet assault course; chemical, biological, and radiological (CBR) training areas; target detection training areas; an infiltration course; and a former ammunition supply point. CBR training at MRS-22 (Site 3) only involved training troops in the identification of targets while wearing gas masks, and did not involve the use of chemical, biological or radiological materials. Training at the Beach Trainfire Ranges reportedly also included occasional practice mortar use with inert training devices, amphibious assault landings, and battle demonstrations.MRS-24B-Practice Hand Grenade Range: The site is 14.2 acres in size, and is located in the west-central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the Impact Area. MRS-24B will continue to be used for military housing. Historical and sampling information indicate the site was used as practice hand grenade range in the 1940s.MRS-24D-Booby Traps: The site is 1.8 acres in size, and is located in the west central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as a "Booby Traps" and squad patrol training area based on review of a 1946 historical map; however, the site boundary was northwest of the area shown as "Booby Traps" on 1945 and 1946 training maps.MRS-24E-Practice Rifle Grenade Range: The site is 2.7 acres in size, and is located in the west central portion of former Fort Ord. The site is also located south of the Main Garrison and just north of the former Impact Area within a military housing complex. MRS-24E will continue to be used for military housing. MRS-24E was identified as a Practice Rifle Grenade Range on 1945/1946 training maps, but no evidence of this use was discovered during sampling at the site.MRS-27X-Training Site 24: The site is 79.5 acres in size, and is undeveloped open space located in the southeastern portion of former Fort Ord. MRS-27X is currently a habitat reserve area managed by the Bureau of Land Management (BLM), and is open to the public for recreational use. Based on review of Fort Ord training maps, the site was used as a troop training and maneuver area from the 1950s to 1970s, and as an overnight bivouac area and medical training area in the 1980s.MRS-27Y-Training Site 25: The site is 25 acres in size,and is mainly undeveloped open space located in the eastern portion of former Fort Ord along Inter-Garrison Road. A small portion of the site also lies on property that was transferred to California State University Monterey Bay in 1995 for development. The site was identified as one of 26 training sites within Fort Ord Training and Maneuver Areas used as troop training, maneuver, and overnight bivouac areas.MRS-32A-Oil Well Road Training Area: The site is 38 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as atank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and as a troop training and

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

maneuver area from 1950s to 1980s.MRS-32B-Oil Well Road Training Area II: The site is 47 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32B include maintaining the land as habitat reserve. Based on historical training maps (circa 1954 and 1956), it was identified as the "Oil Well Road Training Area"; a portion of the site was reportedly used as a Tank Gunnery Range in 1950s; and the site may also have been used for firing of shoulder-launched projectiles.MRS-39-Mine and Booby Trap Area: The site is 12.1 acres in size, and is located east of General Jim Moore Boulevard and south of Gigling Road in the Marshall Park housing area. MRS-39 will continue to be used for military housing. The site was identified as a Mine and Booby Trap Training Area on 1957/1958 maps.MRS-49-Former Rifle Grenade Range: The site is 28 acres in size, and is located in the west central portion of former Fort Ord, south of Main Garrison and just north of military housing. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a training area and rifle grenade range in the 1940s and 1950s based on interviews conducted during the Preliminary Assessment/Site Inspection (PA/SI) phase of the Fort Ord Archive Search.MRS-59A-Unnamed: The site is 41 acres in size, and is located in the eastern portion of former Fort Ord near the East Garrison and MRS-5. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a possible 2.36-inch rocket range during interviews conducted during the PA/SI phase of the Fort Ord Archive Search. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps.MRS-62-Laguna Seca Open Space: The site is 247 acres in size, and is located at the southern end of former Fort Ord. The site is currently open space andproposed reuse plans include development. The site was identified as a small arms and flare training area during an interview with a former Fort Ord Fire Chief conducted during the PA/SI phase of Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, the site was used as a troop training and maneuver area from the late 1940s through 1980s; and the southern half of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-62 lies within a larger area identified during interviews conducted as part of the Archives Search as "Area T" and was a described as a general area where training may have occurred. The boundary of MRS-62 is based on transfer parcel delineation and not on evidence of munitions use. The boundary of MRS-62 was established to correspond to with disposal Parcel L20.6. Although the size of the parcel to be transferred has changed over time, the boundary of MRS-62 corresponds with the current boundary of Parcel L20.6.MRS-63-Canyon Training Area: The site is 28 acres in size, and is located at the southern end of former Fort Ord east of MRS-62. MRS-63 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as a small arms and flare training area during the PA/SI phase of the Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, most of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators.MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majority of the site lies on property transferred to California State University Monterey Bay (CSUMB) that is currently used for student housing or is proposed for development. A small portion of the site lies on property that is designated as habitat reserve. The site was identified as a reported signal corps field training area during the PA/SI phase of Fort Ord Archive Search, and other uses included aviation

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

training, basic unit training, and a bivouac area from 1950s until housing construction in 1989.MRS-69-Unnamed: The site is 37 acres in size, and is undeveloped open space located on the eastern side of former Fort Ord. MRS-69 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as an area of possible rifle grenade use based on interviews with a former Fort Ord Fire Chief. This site is within land transferred to the BLM and is open to the public for hiking, biking, and horseback riding. Use is limited to marked trails. The public has had access to this area for approximately 6 years.MRS-70-Unnamed: The site is 14 acres in size, and is located on the southeastern side of former Fort Ord, south of Oil Well Road. The site is currently a habitat reserve area managed by BLM, and is open to the public for recreational use. The area encompassing MRS-70 was identified as containing firing berms based on interviews with a former Fort Ord Fire Chief.A ROD addressing OU 9 was completed in April 2005.Operable Unit 2:The Fort Ord Landfills area was designated as Operable Unit 2 (OU2) when a remedial investigation identified the presence of volatile organic compounds (VOCs) associated with landfilled materials in groundwater beneath the site. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated groundwater and ongoing remediation of groundwater associated with OU2 is being conducted in accordance with the OU2 Record of Decision (ROD) and the Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD).In accordance with the OU2 ROD and the Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills, the Army completed removal and consolidation of refuse from the north landfill into the main landfill in October 1998 and installation of an engineered cover system for the main landfill in December 2002 as part of the closure process for the Fort Ord Landfills.At the Fort Ord Landfills, the perimeter fence line was initially designated as the boundary for landfill gas (LFG) compliance monitoring in accordance with applicable or relevant and appropriate requirements (ARARS) and LFG monitoring probes were installed inside the fence line. Monitoring of these probes commenced in June 2000. Fixed-based laboratory results and field measurements showed methane concentration exceeding the 5% regulatory standard in most probes. The Army performed an additional investigation in August 2000 and sampling results showed that methane was detectable extending out about 70 feet front the fence line on the east side of Area F. All probes were monitored again in September and December 2000, with the results again showing methane concentrations exceeding the 5% standard. In response the Army installed additional probes at locations around the outer parts of the OU2 property beyond the fence line in April and May 2001. Analytical results for these probes indicated that methane concentrations at the property boundary were less than the 5% standard, with the exception of the east side of Area F.The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volatile organic compounds (VOCs) in air between the Fort Ord Landfills and the nearest housing. These data were used to complete a screening levelhuman health risk assessment (HHRA) for nearby residences. The HHRA was updated after each monitoring event and attached as an appendix to each ambient air monitoring report. The HHRA concluded that there is a health risk for long-term exposure to VOCs in ambient air; however, the Army determined the data evaluated in the HHRA were limited and additional monitoring would be appropriate. Additional ambient air monitoring was conducted on a quarterly basis in 2003 and the HHRA updated to include these data and evaluate specifically landfill-related risk. The updated HHRA indicated the Fort Ord Landfills are not a significant contributor of VOCs

USARMY FORT ORD (Continued) **1000393341**

in ambient air or risk to downwind receptors.The following remedies for the Fort Ord Landfills were selected in the OU2 ROD:- A cover system to (1) prevent rainwater from percolating through the landfilled areas into the underlying aquifers; (2) collect and remove methane offgas (if necessary); and (3) prevent exposure of sanitary waste in the landfills to the surrounding environment.- Institutional controls (i.e., deed restrictions) to be placed on the property to ensure that the integrity of the cover system is maintained and prevent potential direct exposures of VOCs to the environment or people associated with future use of the site.- Institutional controls (i.e., deed restrictions) that prevent the use of groundwater within the contaminant plume.- Groundwater extraction and treatment, to be monitored on a regular basis and adjusted as warranted by the performance data collected during operation. Additionally, treated groundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface.Three previous ESDsto the OU2 ROD have been completed:- Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD). The OU2 ESD finalized the cleanup standard for the Upper 180-foot Aquifer to be consistent with those of the A-aquifer to facilitate the coordinated cleanup strategy for both aquifers. - Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills (Area A ESD). The Area A ESD addressed excavation and consolidation of refuse from the north landfill (Area A) into the main landfill (Areas B through F).- Explanation of Significant Differences, Consolidation of Remediation Waste in a Corrective Action Management Unit, Operable Unit 2, Fort Ord Landfills (CAMU ESD). The CAMU ESD addressed using remediation waste as foundation layer material instead of "clean" (uncontaminated) soil as described in the OU2 ROD.An additional ESD addressing OU2 was completed in October of 2006.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Delof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms tarsives. Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented informer Fort Ord subject to the provisions of the Fort Ord FFA. EPA OU-01: Fritzsche Army Airfield Fire Drill Area An investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wter treatment system is complete and is operational. In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will provide more clean land for re-use. The changes are documented in the Explanation of Signd grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, p in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well. EPA OU-08: OE Track 0 (No Further Action)the process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will contite 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are kned at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitanA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), an OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site wd of Decision addressing OE at EPA OU-10 was signed in September 2002. Operable Unit 10: MRS-3 Based on the MRS-3 sampling results, a MEC removal to four feet bgs was recommended per the Final Phase I Engineering Evaluation/Cost Analysis (Phase I E MEC items were removed. In addition, 293 items were removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Most of the items found at MRS-4B were consistent with the reportt MRS-13B at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from burial pits included grenade and mine fuzes, firing devices, pyrotechnics (signal, illumination and smoke), rockets, rifle and hand smoke grenades, blasting caps,items found within MRS-27G were generally of the types associated with overnight bivouac training sites and general maneuver areas. Within MRS-27G's boundaries a small number of 75 millimeter (mm) and 37mm items were removed, inspected and determinedemoval to four feet bgs. This MRS was subsequently subdivided into 240 100- X 100-foot removal grids. An investigation for MEC was conducted using the Schonstedt Model GA-52/Cx magnetometer, with all detected MEC removed. 50 MEC items were removed. Iere removed. In addition, 149 pounds of debris was removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Of the 26 MEC items recovered, 2 munitions (a MK I 75mm Shrapnel prtems were non-penetrating (e.g., pyrotechnics, grenades, and grenade and projectile fuzes) munitions. The penetrating military munitions found included projectiles, rifle grenades, and rockets. Both DMM and MD were found in numerous burial pits thatated all detected anomalies at 52 100- X 100-foot grids using a Schonstedt Model GA-52/Cx magnetometer. During this investigation, 19 MEC items were removed. In addition, 453 pounds of debris was removed, inspected and determined not to pose an exploal pits were discovered during the removal conducted at MRS-53. Both DMM and MD were found in burial pits at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from these pits included fuzes (grenade, mine, time, and projectile), sich 1998, 23 100- X 200-foot grids were identified at MRS-55. Subsequently, 19 of these grids were surveyed using a Schonstedt Model GA-52/Cx magnetometer with a maximum search lane width of 5 feet. Following the survey, anomalies were selected for in). Other sources of future land use information include public benefit conveyance, negotiated sale requests, transfer documents, and the Installation-Wide Multispecies Habitat Management Plan for Former Fort Ord, California. The Reuse Plan identifiedin ground disturbing activities (e.g., during construction/excavation). A ROD addressing Operable Unit 10 was completed in August 2008. The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acresm Action in the Record of Decision, Interim Action for Ordnance and Explosives at Ranges 43-48, Range 30.A, and Site OE-16, Former Fort Ord, California (Interim Action ROD; .Army, 2002), and the implementation of MEC remediation under the Interim Acton tetrachloride (CT) detected in three different aquifers up to 550 feet below ground surface (bgs). No records exist to indicate exactly when, how often, or how much CT may have been used, stored, or disposed of; however, by delineating

the areas od by the Marina Coast Water District (MCWD) and is pumped from wells that are located east of the OUCTP area screened in the Lower 180-Foot Aquifer. Based on groundwater monitoring data and data provided by the MCWD, these drinking water wells have nnd flame thrower training. Most of this area has been used for military housing for over 40 years. MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housTraining Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in soesidential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as aBooby Traps and squad patrol training area based on revied reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as a tank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and a. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps. MRS-62-L78 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majoritsite. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated grounof Area F. The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volroundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface. Three previous ESDs to the OU2 ROD have been completed: - Explanation of Significant Differences, Operable Unit 2, Fort O

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal July 14, 1989): Fort Ord covers 46 square miles on Monterey Bay approximately 5.6 miles north of Monterey, Monterey County, California. The installation is bordered by the City of Marina and the Salinas River to the north, El Toro Creek to the east, Seaside and Del Rey Oaks to the south, and Monterey Bay to the west. Fort Ord was established in 1917 as a maneuver area and field artillery target range for units then stationed at the Presidio of Monterey. Its primary mission now is training. Industrial operations at Fort Ord include vehicle maintenance areas, a battery charging/repair facility, photographic processing laboratories, spray painting operations, a plastics shop, laundry/dry cleaning facilities, vehicle wash racks, and a small arms repair shop. Chemicals and ha ardous wastes were managed and disposed of at Fort Ord. According to tests conducted by the Army in 1986, elevated levels of contaminants were detected in off-base ground water. The contamination is emanating from the base and may be contaminating the drinking water supplies of the City of Marina; however, the exact location of the source has not yet been identified. The contaminants includecarbon tetrachloride, tetrachloroethylene, trichloroethylene, 1,1,1-trichloroethane, and trans-1,2-dichloroethylene. An estimated 38,600 people obtain drinking water from wells within 3 miles of ha ardous substances on the fort. Ground water is also used for irrigation. In addition, soil and ground water are contaminated at the Fire Drill Area, where approximately 600 gallons of petroleum products have been spilled. Fort Ord has identified at least 18 other contamination problems.Fort Ord is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part of IRP, theArmy is implementing a sampling plan to investigate ground water contamination. The Army is treating contaminated soil and ground water at nearby Frit sche Army Airfield Fire Drill Area. Status February 21, 1990): IRP activities continue.

Site Description: The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. Environmental investigations began at Fort Ord in 1984 under the Regional Water Quality Control Board (RWQCB) cleanup or abatement orders. In 1986, further investigations began at Operable Unit 2 (OU2). In 1990, Fort Ord was placed on the National Priorities List (NPL) because of Volatile Organic Compounds (VOCs) found in ground water beneath OU2. A Federal Facility Agreement (FFA) was signed in 1990 by the Army, U.S. Environmental Protection Agency, the California Environmental Protection Agency's Department of Toxic Substances Control (DSTC)

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and Regional Water Quality control Board (RWQCB). The FFA established schedules for commencing Remedial Investigations and Feasibility Studies (RI/FS). In 1991, the basewide RI/FS began and Fort Ord was placed on the Base Realignment and Closure list. The final FS for OU2 was completed on October 1, 1993, and the Record of Decision (ROD) was signed in August 1994. An Interim Action Plug-In ROD was signed in March 1994 for excavation and treatment of shallow contaminated soils. The Draft and Draft Final Versions of the Basewide RI/FS were completed in August 1994 and December 1994, respectively.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Del Rey Oaks to the south and Marina to the north. The Southern Pacific Railroad and Highway 1 pass through the western portion of former Fort Ord, separating the beachfront from the rest of the base. Laguna Seca Recreation Area and Toro Regional Park border former Fort Ord to the south and southeast, respectively, as well as several small communities such as Toro Park Estates and San Benancio.There are three main developed areas within Fort Ord: the Main Garrison, the East Garrison and Fritzsche Army Airfield (FAAF). The Main Garrison contains commercial, residential, and light industrial facilities. The East Garrison occupies 350 acres on the northeastern edge of the base and consists of military and industrial support areas, recreationalfacilities, and recreational open space. The FAAF serves as the general airfield for Fort Ord. EPA placed the site on the National Priorities List in 1990. Several areas of contamination exist on site. Generally, chemicals present in soil are the result of former routine maintenance and support activities on Fort Ord. Such activities include: maintenance of military vehicles at wash racks, tank storage of chemicals such as waste oil, the use of oil/water separators in drainage areas, and pesticide use and storage. The facility contained leaking petroleum underground storage tanks, containers of waste oil and various automotive chemicals, chemical storage areas, oil-waste separators, target ranges, and landfills. One on-site area is a 150-acre landfill that was primarily used to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Recordof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms target ranges. Over 12,000 acres are suspected of containing ordnance and explosives (OE). In particular, the 8,000 acre Multi-Range Area (MRA) is known to contain dangerous unexploded ordnance. OE investigations are complicated by technological limitations and protected habitat that covers the area and requires special management pursuant to the base Habitat Management Plan (HMP). This includes the current requirement to use prescribed burns to clear vegetation prior to OE removal. The HMP currently restricts burns to 800 acres/year, thus requiring at least 10 years to address OE in the MRA.The aquifers at the site are called the upper aquifer and the 180-foot aquifer. Approximately 40,000 people obtain drinking water from wells located within 3 miles of the site.Since opening in 1917, Fort Ord served as a training and staging facility for Army infantry troops. No permanent improvements were made until the late 1930s when administrative buildings, barracks, mess halls, tent pads, and a sewage treatment plant were constructed. The Main Garrison was constructed between 1940 and the 1960s, starting in the northwest corner of the base and expanding southeastward. The FAAF was incorporated into Fort Ord in 1961. Since 1917, portions of the Installation were used by infantry units for maneuvers, target ranges, and other purposes. Ordnance and explosives (OE) that have been fired into, fired upon, or used on the facility include artillery and mortar projectiles, rockets

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and guided missiles, rifle and hand grenades, practice land mines, pyrotechnics, bombs, and demolition materials. A wide variety of conventional OE items have been located at sites throughout the former Fort Ord, including pyrotechnics and explosives.Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented in preparation for transfer and reuse of former Fort Ord property. The Ord Military Community, located within the Main Garrison portion of former Fort Ord, will be retained by the Army. Since base closure in September 1994, lands outside the Ord Military Community have been subjected to the reuse process. Some of the property on the installation has been transferred. A large portion of the Inland Training Ranges was assigned to the Bureau of Land Management (BLM). The other major recipient of Fort Ord property has been the California State University (CSU) system. The CSU Monterey campus is located on the site of the former Fort Ord and is expected to expand in the future. Other areas on the installation have been or will be transferred to federal, state, local, and private entities through economic development conveyance, public benefit conveyance, negotiated sale, or other means.The reuse of the former Fort Ord following transfer of property increases the possibility of the public beingexposed to explosive hazards. In November 1998, the Army agreed to evaluate OE at former Fort Ord in an OE Remedial Investigation/Feasibility Study (RI/FS) consistent with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). A Federal Facility Agreement (FFA) was signed in 1990 by the Army, EPA, and the California Environmental Protection Agency's Department of Toxic Substances control (DTSC; formerly the Department of Health Services or DHS). The FFA established schedules for performing remedial investigations and feasibility studies and requires that remedial actions be completed as expeditiously as possible. In April 2000, an agreement was signed between the Army, EPA and DTSC to evaluate OE at theformer Fort Ord subject to the provisions of the Fort Ord FFA.EPA OU-01: Fritzsche Army Airfield Fire Drill AreaAn investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wassigned in September 1995. Groundwater cleanup standards were established in the ROD which must be met through the existing pump and treat system. The selected remedy is consistent with the initial action described above. The groundwater treatment system was installed in 1988. In 2004, the Army awarded a fixed price contract for the management and completion of the groundwater cleanup remedy at Operable Unit 1.EPA OU-02: Fort Ord LandfillOne on-site area is a 150-acre landfill that was primarilyused to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Record of Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed.The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. In 1994, the Army completed an investigation focusing on groundwater andsoil contamination originating from the landfill. A Record of Decision (ROD) was signed in August 1994. The ROD included capping the landfill and installing a groundwater pump and treatment system. Construction of the groundwater treatment system is complete and is operational.In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

provide more clean land for re-use. The changes are documented in the Explanation of Significant Differences (ESD) in August 1996.The consolidation is complete and capping of the main landfill was completed in December 2002. The Army has installed an active landfill gas extraction and treatment system to capture and remediate methane andother volatile organic compound gases that are being generated by decaying materials in the landfill. The Army continues to monitor landfill gases to ensure that do not pose a health hazardEPA OU-03: Overall SiteIn 1990, the Army began further investigations into the nature and extent of on- and off-site soil and groundwater contamination, as well as any ecological or health threats that may be present. The investigation identified three waste disposal sites, firing ranges, and a vehicle maintenance area that require extensive cleanup actions. The Army completed the RI/FS and ROD in 1997, and all soil cleanup actions are complete, and groundwater pump and treatment systems are operational. The action included remediating the Sites 2/12 maintenance/disposal area by soil excavation and ongoing groundwater remediation, Sites 16/17 disposal area by soil excavation, Site 31 disposal area by soil excavation, and Site 39 small arms ranges by soil excavation. Most of the excavated soils were placed at the Fort Ord Landfill, which was closed in December 2002. The Army is currently evaluating treatment/disposal options for additional Site 39 soils to be excavated.Site 39, which includes the Multi-Range Area (MRA), was reportedly used sincethe early 1900s for small arms training and ordnance training exercises, including onshore naval gunfire. Over the years, in addition to small arms rounds, various types of ordnance have been used or found in the MRA, including hand grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, petroleum hydrocarbons, and other metals associated with training activities. Ordnance is being addressed through other remedial or removal actions.Site 39 comprises approximately 8,500 acres in the southern portion of Fort Ord. Site 39 is bounded byEucalyptus Road to the north, Barloy Canyon Road to the east, Boundary Road and South Boundary Road to the south, and General Jim Moore Blvd to the west.Results of the RI indicate the metals lead and beryllium, explosive compounds, and organic compounds are present in shallow soil above background concentrations in localized areas at Site 39, and are associated with past military training activities.Spent ammunition found at the Small Arms Ranges consists of bullets, black powder rifle balls, and lead shot. Lead is the primary chemical of concern in soil at the Small Arms Ranges at Site 39. In localized areas, spent ammunition is found on the ground surface.An Explanation of Significant Differences addressing OU 3 was completed in December2003.EPA OU-04: Surface SoilsEPA OU-05: No Action SoilsEPA OU-07: Site 3 Beach RangeSite 3 is situated within about 3.2 miles (780 acres) of dunes along the coastline of Monterey Bay at the western boundary of Fort Ord. Results of the investigation indicate lead from small arms is the main contaminant at the site. The site is also home of the Smith’s Blue butterfly, an endangered species, and buckwheat plants which the butterflies use to lay their eggs on. In 1997, the Army completed a ROD allowing them to first clean up the lead contamination to address human health concerns by soil excavation and placement in the Fort Ord Landfill, which was simultaneously being remediated (capped). This cleanup was completed in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well.EPA OU-08: OE Track 0 (No Further Action)The Track 0 process addresses single or grouped areas of land at the former Fort Ord that have no history of OE-related use and for which No Action is necessary to protect human health and the environment. These areas consist largely of land that has been developed for military support or residential use throughout Fort Ord’s history and areas

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

that have no physical or documented evidence of OE-related training. A Track 0 Special Case area includes a former landfill where OE scrap items were found buried with refuse. No OE-related activities occurred in the area and the OE scrap items and the refuse were entirely removed.Track 0 areas were grouped geographically: e.g., all non-OE land in the Main Garrison was grouped and discussed together as one area. Track 0 includes parcels in the following areas:- Highway 1 Area- Golf Course Maintenance Area- Brostrom Park Area- Patton/Abrams Park Housing Area- Open Space, Main Entrance Area- Surplus II Area- Fritzsche Army Airfield Area- East Garrison Area- Main Garrison Area- OU 2 Landfill Area- Reservation Road AreaTrack 0 sites were addressed by a No Further Action Record of Decision (ROD) dated July 2, 2002.The Army has been conducting military munitions sampling and removal actions at identified Munitions Response Sites (MRS) and will continue these actions to mitigate imminent MEC-related hazards to the public while gathering data about the type of military munitions and level of hazard at each of the sites for use in the base-wide MR RI/FS. The Army is performing its activities pursuant to the President's authority under the CERCLA Section 104, as delegated to the Army in accordance with Executive Order 12580 and in compliance withthe process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will continue to be involved. The Army is preparing the MR RI/FS for Fort Ord to address MEC-related hazards. The MR RI/FS will review and evaluate past investigative and removal actions, as well as recommend future response actions deemed necessary to protect human health and the environment on the basis of proposed reuses specified in the Fort Ord Reuse Authority (FORA) Reuse Plan.The information to be evaluated during the MR RI/FS will include site knowledge, the quality of the available information,work completed, and intended future land uses. The base-wide MR RI/FS will contain a comprehensive evaluation of all MEC-related data for the entire former Fort Ord and will evaluate long-term response alternatives for cleanup and risk management ofMEC.The MR RI/FS is organized as a "tracking" process whereby sites with similar characteristics will be grouped to expedite cleanup, reuse, and/or transfer based on current knowledge. The Track 0 Record of Decision (ROD) addresses areas on the former Fort Ord that have been identified as requiring no munitions response to protect human health (public safety) and the environment (Track 0 areas). Other Track (1 through 3) areas will be addressed separately for the other lands that have or are suspected to have a history of military munitions-related use and investigations completed to date. Track 1 sites were suspected to have been used for training with military munitions but for which no further response action is required because they fall into one of the three categories defined in Record of Decision, No Further Action Related to Munitions and Explosives of Concern-Track 1 Sites; No Further Remedial Action with Monitoring for Ecological Risks from Chemical Contamination at Site 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are known or suspected to be present, but MEC investigations have not yet been completed.All base-wide MR RI/FS documents have been or will be prepared in cooperation with the EPA and DTSC in accordance with the Fort Ord FFA; made available for public review and comment; and placed in the Administrative Record and local information repositories.A ROD addressing OU 8 was completed in 2002. An Explanation of Significant Difference (ESD) pertaining to the OU8 ROD was completed in April of 2005.EPA OU-09: OE Track 1Track 1 sites are sites where munitions and explosives of concern were suspected but no further remedial action was deemed necessary to protect human health and the environment. The Track 1 Proposed Plan was issued for public comment on September 15, 2004 and

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the ROD is scheduled to be signed in 2005.EPA OU-10: OE at Ranges 43-48, Range 30A, and Site OE-16Ranges 43-48 cover approximately 498 acres to the south of Eucalyptus Road in the south-central portion of the former Fort Ord. The majority of the site is designated as habitat reserve and will remain undeveloped (473 acres), and a limited portion of the site (25 acres) will be developed and reused.These ranges were part of the former Fort Ord's Multi-Range Area (MRA) and are categorized as firing ranges where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Ranges 43-48 mainly consists of central maritime chaparral (CMC)with some grassland areas.Training facilities maps indicate these ranges were used for a variety of live fire exercises from the 1940s through the 1990s. Records and recent field investigations indicate the ammunition used at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitank weapon (LAW); small arms; practice anti-personnel mines; dragon guided missiles; practice claymore mines; and fragmentation hand grenades.The former firing ranges contain sensitively fuzed, highly dangerous OE present on the ground surface or at shallow depths below the ground. As described above, numerous types of OE ranging from hand grenades to 90mm recoilless rifle rounds are known or suspected to be on the site. During recent limited surface removals in 2001, thousands of OE items were recovered at Ranges 43-48.This Interim Action site is adjacent to (less than 4,000 feet from) residential neighborhoods at Ord Military Community (Fitch and Marshall Parks) and is near the City of Seaside. The Fitch and Martin Luther King Jr. Middle Schools are located less than a mile from Ranges 43-48. Existing site security measures include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In the last three years, five documented incidents of persons trespassing into the Ranges 43-48 site occurred. In 1999, there were two documented cases of children entering the fenced MRA at Ranges44 and 45, and collecting and removing 40mm practice grenades found on the ground surface. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The majority of this Interim Action site is designated as habitat reserve and will remain undeveloped. Future reuse of Transfer Parcel E21b.3 is development.Range 30A includes approximately 388 acres located in the southeastern portion of the MRA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerFort Ord MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Range 30A mainly consists of CMC with somegrassland areas.Range 30A was constructed in 1990 as a 40mm machine gun range and was in use until 1993. According to the Fort Ord Training Ranges Standard Operating Procedure (SOP), the only weapon authorized for use at Range 30A from 1991 and 1992was the MK19 40mm machine gun, Mod 3. Ammunition authorized for use at Range 30A included HE, high explosive dual purpose (HEDP) and target practice (TP).Range 30A is known to contain sensitively fuzed, highly dangerous 40mm grenades and evidence of60mm and 81mm mortars and 37mm, 75mm, 155mm, and 8-inch projectiles. Limited surface removals in 2001 in the accessible areas of Range 30A have recovered hundreds of whole or partial OE and OE scrap items.The Range 30A Interim Action site is locatedin close proximity (approximately 2,200 feet north) to the Laguna Seca residential area and Laguna Seca Golf Course, and less than a mile from the Laguna Seca Raceway.

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

South Boundary Road, located approximately 2,000 feet to the south, is open to vehicular traffic during events at Laguna Seca Raceway and is always open to the public for jogging, hiking, and biking. This range was part of the former Fort Ord's MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Existing access deterrents include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), and three other incidents of fence damage were reported within 4,000 feet of the range (near Range 29). Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.As part of the closure of the former Fort Ord, the MRA will be transferred to the BLM and most of the MRA will remain undeveloped as habitat reserve. The habitat management plan (HMP) presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.Site OE-16 includes approximately 80 acres located immediately north of the former Fort Ord MRA, between Eucalyptus and Parker Flats roads and bounded by Watkins Gate Road to the east (Plate 5). This site will become habitat reserve and will remain undeveloped. The Bureau of Land Management (BLM) land (immediately adjacent) is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence. The site is posted with signs warning of the dangers associated with unexploded ordnance. Vegetation at Site OE-16 mainly consists of CMC with some grassland areas.Site OE-16 is a World War II (WWII) era rocket range, and is identified as a "bazooka practice" area on Fort Ord Training Facilities maps dating from 1945 and 1946. Available training maps after 1946 do not identify the bazooka practice area. According to Fort Ord Range Control, this range was probably used as an antitank rocket range during and shortly after WWII. Available information indicates that Site OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site was later used for a portion of time as an anti-armor training area. Evidence from the site indicates that both practice and HEAT rounds were used.Site OE-16 contains sensitively fuzed, highly dangerous OE, such as HEAT projectiles, present on the ground surface or at shallow depths below the ground. During recent limited surface removals in 2001, hundreds of OE items, including expended and live 2.36-inch rockets (practice and HEAT), practice antitank mines, rifle grenades, hand grenade fuzes, and OE scrap were recovered.Site OE-16 is located adjacent to the MRA and land that has been transferred to the BLM. The BLM land is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence posted with signs warning of the dangers associated with unexploded ordnance. The site is in close proximity to a residential neighborhood (Fitch Park) on the former Fort Ord. In 2001, an incident of persons trespassing withinthe MRA adjacent to Site OE-16 was reported. In addition, five incidents of trespassing into the MRA adjacent to Site OE-16 occurred within the last three years. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The land that includes Site OE-16 will be transferred to the BLM and will remain undeveloped as habitat reserve. The HMP for former Fort Ord presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.An Interim Action Record of Decision addressing OE at EPA OU-10 was signed in September 2002.The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acres was burned. The Army is studying the October 2003 burn to understand both what went right and what went wrong. Ordnance has been cleared from the surface of the entire burned area and subsurface clearance is ongoing. The next prescribed burn is scheduled to take place in 2005.OU-10 Track 2 Sites:Track 2 sites are sites where munitions and explosives of concern were found and a removal action was conducted to clean it up. The first of several Track 2 RI/FS reports is due to be issued in 2005 for the area of Fort Ord known as Parker Flats.EPA OU-11: OE Track 3Track 3 sites are sites where munitions and explosives of concern are known to be present but no cleanup has been conducted yet. The final Track 3 ROD is expected to be completed by 2007, with UXO cleanup work continuing for at least 10 years thereafter.EPA OU-12: Carbon Tetrachloride PlumeThe Army has initiated a remedial investigation/feasibility study of another area of groundwater contamination, the so-called "carbon tetrachloride plume operable unit", near the City of Marina. Contaminants slightly above regulatory standards have been found in offsite groundwater. This area of contamination is not being used for drinking water. Potential source areas are also being investigated. A soil vapor sampling and extraction system pilot study was conducted in 2004 to address the vadose zone above the carbon tetrachloride plume area. The pilot study was very successful and appears to have removed significant mass from the vadose zone. The Army expects to complete the draft Remedial Investigation/Feasibility Study Report for the carbon tetrachloride plume operable unit in 2005.OU 9:A list of the 21 Track 1 sites for which No Further Action Related to MEC is required is comprised of:MRS-1-Flame Thrower Range: The site is 25 acres in size, and is located in the northwestern part of former Fort Ord. MRS-1 is currently occupied by housing. Proposed reuse plans include residential development. Based on the literature review and sampling, the site appears to have been used for camouflage training, mine and booby trap training, non-firing mortar training, and flame thrower training. Most of this area has been used for military housing for over 40 years.MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housing. The site is currently undeveloped with proposed reuse plans to include development with reserve areas or development with restrictions. Review of training maps, aerial photographs, and other Fort Ord maps indicate mine and booby trap training occurred at the site. The adjacent areas have been used as a school and military housing for over 40 years.MRS-13A-Practice Mortar Range: The site is 61 acres in size, and is located in the northern portion of the former Fort Ord. Proposed reuse plans for MRS-13A include residential development and a park. The majority of the site has contained residential housing for nearly 30 years. The area was extensively graded in the 1970s and housing was built on portions of the site. The western portion of the site was used as a landfill in the 1960s. All landfill material in the western portion of MRS-13A was excavated (removed) and transported tothe main landfill south of Immix Road in the 1990s. Several munitions debris items and three unexploded ordnance (UXO) items were identified within and adjacent to MRS-13A during landfill excavation and housing development grading activities and were removed: three live ground signals and loose pyrotechnic material; three inert hand grenade primer detonators; two inert 40mm signal cartridges; an inert fin assembly for a 3.5-inch rocket; a live rifle grenade; miscellaneous projectiles; and two inert 3.5-inch rocket motors.MRS-20-Recoilless Rifle Training Range: The site is 7 acres in size, and is located in the southwestern portion of the Main Garrison near residential housing and Highway 1. This site is currently open space with

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

proposed reuse plans, which include development. The site was identified as a potential Recoilless Rifle Training Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in some cases, could be fired by either method.MRS-22 (Site 3)-Beach Trainfire Ranges: The site is 952 acres in size, and is located on the Monterey Baycoastline along the western margin of former Fort Ord as shown on Plate 2. The site is currently open space with the proposed reuse of the site to include a State park with open space and recreational areas. Training maps, aerial photographs, and interviews indicate the site was used as the Beach Trainfire Ranges from 1940s until base closure in 1994. The ranges contained 17 small arms firing ranges; an obstacle course; a bivouac area; a rifle instruction circle; a bayonet assault course; chemical, biological, and radiological (CBR) training areas; target detection training areas; an infiltration course; and a former ammunition supply point. CBR training at MRS-22 (Site 3) only involved training troops in the identification of targets while wearing gas masks, and did not involve the use of chemical, biological or radiological materials. Training at the Beach Trainfire Ranges reportedly also included occasional practice mortar use with inert training devices, amphibious assault landings, and battle demonstrations.MRS-24B-Practice Hand Grenade Range: The site is 14.2 acres in size, and is located in the west-central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the Impact Area. MRS-24B will continue to be used for military housing. Historical and sampling information indicate the site was used as practice hand grenade range in the 1940s.MRS-24D-Booby Traps: The site is 1.8 acres in size, and is located in the west central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as a "Booby Traps" and squad patrol training area based on review of a 1946 historical map; however, the site boundary was northwest of the area shown as "Booby Traps" on 1945 and 1946 training maps.MRS-24E-Practice Rifle Grenade Range: The site is 2.7 acres in size, and is located in the west central portion of former Fort Ord. The site is also located south of the Main Garrison and just north of the former Impact Area within a military housing complex. MRS-24E will continue to be used for military housing. MRS-24E was identified as a Practice Rifle Grenade Range on 1945/1946 training maps, but no evidence of this use was discovered during sampling at the site.MRS-27X-Training Site 24: The site is 79.5 acres in size, and is undeveloped open space located in the southeastern portion of former Fort Ord. MRS-27X is currently a habitat reserve area managed by the Bureau of Land Management (BLM), and is open to the public for recreational use. Based on review of Fort Ord training maps, the site was used as a troop training and maneuver area from the 1950s to 1970s, and as an overnight bivouac area and medical training area in the 1980s.MRS-27Y-Training Site 25: The site is 25 acres in size,and is mainly undeveloped open space located in the eastern portion of former Fort Ord along Inter-Garrison Road. A small portion of the site also lies on property that was transferred to California State University Monterey Bay in 1995 for development. The site was identified as one of 26 training sites within Fort Ord Training and Maneuver Areas used as troop training, maneuver, and overnight bivouac areas.MRS-32A-Oil Well Road Training Area: The site is 38 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as atank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and as a troop training and

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

maneuver area from 1950s to 1980s.MRS-32B-Oil Well Road Training Area II: The site is 47 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32B include maintaining the land as habitat reserve. Based on historical training maps (circa 1954 and 1956), it was identified as the "Oil Well Road Training Area"; a portion of the site was reportedly used as a Tank Gunnery Range in 1950s; and the site may also have been used for firing of shoulder-launched projectiles.MRS-39-Mine and Booby Trap Area: The site is 12.1 acres in size, and is located east of General Jim Moore Boulevard and south of Gigling Road in the Marshall Park housing area. MRS-39 will continue to be used for military housing. The site was identified as a Mine and Booby Trap Training Area on 1957/1958 maps.MRS-49-Former Rifle Grenade Range: The site is 28 acres in size, and is located in the west central portion of former Fort Ord, south of Main Garrison and just north of military housing. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a training area and rifle grenade range in the 1940s and 1950s based on interviews conducted during the Preliminary Assessment/Site Inspection (PA/SI) phase of the Fort Ord Archive Search.MRS-59A-Unnamed: The site is 41 acres in size, and is located in the eastern portion of former Fort Ord near the East Garrison and MRS-5. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a possible 2.36-inch rocket range during interviews conducted during the PA/SI phase of the Fort Ord Archive Search. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps.MRS-62-Laguna Seca Open Space: The site is 247 acres in size, and is located at the southern end of former Fort Ord. The site is currently open space andproposed reuse plans include development. The site was identified as a small arms and flare training area during an interview with a former Fort Ord Fire Chief conducted during the PA/SI phase of Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, the site was used as a troop training and maneuver area from the late 1940s through 1980s; and the southern half of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-62 lies within a larger area identified during interviews conducted as part of the Archives Search as "Area T" and was a described as a general area where training may have occurred. The boundary of MRS-62 is based on transfer parcel delineation and not on evidence of munitions use. The boundary of MRS-62 was established to correspond to with disposal Parcel L20.6. Although the size of the parcel to be transferred has changed over time, the boundary of MRS-62 corresponds with the current boundary of Parcel L20.6.MRS-63-Canyon Training Area: The site is 28 acres in size, and is located at the southern end of former Fort Ord east of MRS-62. MRS-63 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as a small arms and flare training area during the PA/SI phase of the Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, most of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators.MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majority of the site lies on property transferred to California State University Monterey Bay (CSUMB) that is currently used for student housing or is proposed for development. A small portion of the site lies on property that is designated as habitat reserve. The site was identified as a reported signal corps field training area during the PA/SI phase of Fort Ord Archive Search, and other uses included aviation

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

training, basic unit training, and a bivouac area from 1950s until housing construction in 1989.MRS-69-Unnamed: The site is 37 acres in size, and is undeveloped open space located on the eastern side of former Fort Ord. MRS-69 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as an area of possible rifle grenade use based on interviews with a former Fort Ord Fire Chief. This site is within land transferred to the BLM and is open to the public for hiking, biking, and horseback riding. Use is limited to marked trails. The public has had access to this area for approximately 6 years.MRS-70-Unnamed: The site is 14 acres in size, and is located on the southeastern side of former Fort Ord, south of Oil Well Road. The site is currently a habitat reserve area managed by BLM, and is open to the public for recreational use. The area encompassing MRS-70 was identified as containing firing berms based on interviews with a former Fort Ord Fire Chief.A ROD addressing OU 9 was completed in April 2005.Operable Unit 2:The Fort Ord Landfills area was designated as Operable Unit 2 (OU2) when a remedial investigation identified the presence of volatile organic compounds (VOCs) associated with landfilled materials in groundwater beneath the site. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated groundwater and ongoing remediation of groundwater associated with OU2 is being conducted in accordance with the OU2 Record of Decision (ROD) and the Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD).In accordance with the OU2 ROD and the Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills, the Army completed removal and consolidation of refuse from the north landfill into the main landfill in October 1998 and installation of an engineered cover system for the main landfill in December 2002 as part of the closure process for the Fort Ord Landfills.At the Fort Ord Landfills, the perimeter fence line was initially designated as the boundary for landfill gas (LFG) compliance monitoring in accordance with applicable or relevant and appropriate requirements (ARARS) and LFG monitoring probes were installed inside the fence line. Monitoring of these probes commenced in June 2000. Fixed-based laboratory results and field measurements showed methane concentration exceeding the 5% regulatory standard in most probes. The Army performed an additional investigation in August 2000 and sampling results showed that methane was detectable extending out about 70 feet front the fence line on the east side of Area F. All probes were monitored again in September and December 2000, with the results again showing methane concentrations exceeding the 5% standard. In response the Army installed additional probes at locations around the outer parts of the OU2 property beyond the fence line in April and May 2001. Analytical results for these probes indicated that methane concentrations at the property boundary were less than the 5% standard, with the exception of the east side of Area F.The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volatile organic compounds (VOCs) in air between the Fort Ord Landfills and the nearest housing. These data were used to complete a screening levelhuman health risk assessment (HHRA) for nearby residences. The HHRA was updated after each monitoring event and attached as an appendix to each ambient air monitoring report. The HHRA concluded that there is a health risk for long-term exposure to VOCs in ambient air; however, the Army determined the data evaluated in the HHRA were limited and additional monitoring would be appropriate. Additional ambient air monitoring was conducted on a quarterly basis in 2003 and the HHRA updated to include these data and evaluate specifically landfill-related risk. The updated HHRA indicated the Fort Ord Landfills are not a significant contributor of VOCs

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

in ambient air or risk to downwind receptors.The following remedies for the Fort Ord Landfills were selected in the OU2 ROD:- A cover system to (1) prevent rainwater from percolating through the landfilled areas into the underlying aquifers; (2) collect and remove methane offgas (if necessary); and (3) prevent exposure of sanitary waste in the landfills to the surrounding environment.- Institutional controls (i.e., deed restrictions) to be placed on the property to ensure that the integrity of the cover system is maintained and prevent potential direct exposures of VOCs to the environment or people associated with future use of the site.- Institutional controls (i.e., deed restrictions) that prevent the use of groundwater within the contaminant plume.- Groundwater extraction and treatment, to be monitored on a regular basis and adjusted as warranted by the performance data collected during operation. Additionally, treated groundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface.Three previous ESDsto the OU2 ROD have been completed:- Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD). The OU2 ESD finalized the cleanup standard for the Upper 180-foot Aquifer to be consistent with those of the A-aquifer to facilitate the coordinated cleanup strategy for both aquifers. - Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills (Area A ESD). The Area A ESD addressed excavation and consolidation of refuse from the north landfill (Area A) into the main landfill (Areas B through F).- Explanation of Significant Differences, Consolidation of Remediation Waste in a Corrective Action Management Unit, Operable Unit 2, Fort Ord Landfills (CAMU ESD). The CAMU ESD addressed using remediation waste as foundation layer material instead of "clean" (uncontaminated) soil as described in the OU2 ROD.An additional ESD addressing OU2 was completed in October of 2006.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Delof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms tarsives. Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented informer Fort Ord subject to the provisions of the Fort Ord FFA. EPA OU-01: Fritzsche Army Airfield Fire Drill Area An investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wter treatment system is complete and is operational. In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will provide more clean land for re-use. The changes are documented in the Explanation of Signd grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, p in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well. EPA OU-08: OE Track 0 (No Further Action)the process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will contite 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are kned at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitanA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), an OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site wd of Decision addressing OE at EPA OU-10 was signed in September 2002. Operable Unit 10: MRS-3 Based on the MRS-3 sampling results, a MEC removal to four feet bgs was recommended per the Final Phase I Engineering Evaluation/Cost Analysis (Phase I E MEC items were removed. In addition, 293 items were removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Most of the items found at MRS-4B were consistent with the reportt MRS-13B at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from burial pits included grenade and mine fuzes, firing devices, pyrotechnics (signal, illumination and smoke), rockets, rifle and hand smoke grenades, blasting caps,items found within MRS-27G were generally of the types associated with overnight bivouac training sites and general maneuver areas. Within MRS-27G's boundaries a small number of 75 millimeter (mm) and 37mm items were removed, inspected and determinedemoval to four feet bgs. This MRS was subsequently subdivided into 240 100- X 100-foot removal grids. An investigation for MEC was conducted using the Schonstedt Model GA-52/Cx magnetometer, with all detected MEC removed. 50 MEC items were removed. Iere removed. In addition, 149 pounds of debris was removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Of the 26 MEC items recovered, 2 munitions (a MK I 75mm Shrapnel prtems were non-penetrating (e.g., pyrotechnics, grenades, and grenade and projectile fuzes) munitions. The penetrating military munitions found included projectiles, rifle grenades, and rockets. Both DMM and MD were found in numerous burial pits thatated all detected anomalies at 52 100- X 100-foot grids using a Schonstedt Model GA-52/Cx magnetometer. During this investigation, 19 MEC items were removed. In addition, 453 pounds of debris was removed, inspected and determined not to pose an exploal pits were discovered during the removal conducted at MRS-53. Both DMM and MD were found in burial pits at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from these pits included fuzes (grenade, mine, time, and projectile), sich 1998, 23 100- X 200-foot grids were identified at MRS-55. Subsequently, 19 of these grids were surveyed using a Schonstedt Model GA-52/Cx magnetometer with a maximum search lane width of 5 feet. Following the survey, anomalies were selected for in). Other sources of future land use information include public benefit conveyance, negotiated sale requests, transfer documents, and the Installation-Wide Multispecies Habitat Management Plan for Former Fort Ord, California. The Reuse Plan identifiedin ground disturbing activities (e.g., during construction/excavation). A ROD addressing Operable Unit 10 was completed in August 2008. The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acresm Action in the Record of Decision, Interim Action for Ordnance and Explosives at Ranges 43-48, Range 30.A, and Site OE-16, Former Fort Ord, California (Interim Action ROD; .Army, 2002), and the implementation of MEC remediation under the Interim Acton tetrachloride (CT) detected in three different aquifers up to 550 feet below ground surface (bgs). No records exist to indicate exactly when, how often, or how much CT may have been used, stored, or disposed of; however, by delineating

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the areas od by the Marina Coast Water District (MCWD) and is pumped from wells that are located east of the OUCTP area screened in the Lower 180-Foot Aquifer. Based on groundwater monitoring data and data provided by the MCWD, these drinking water wells have nnd flame thrower training. Most of this area has been used for military housing for over 40 years. MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housTraining Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in soesidential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as aBooby Traps and squad patrol training area based on revied reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as a tank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and a. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps. MRS-62-L78 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majoritsite. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated grounof Area F. The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volroundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface. Three previous ESDs to the OU2 ROD have been completed: - Explanation of Significant Differences, Operable Unit 2, Fort O

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D006
Waste name: CADMIUM

Waste name: SILVER

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Corrective Action Summary:

Event date: 04/01/1986
Event: CA049PA

Event date: 04/01/1986
Event: CA029SF

Event date: 06/01/1987
Event: CA049SI

Event date: 01/01/1988
Event: Stabilization Measures Implemented, Groundwater extraction and treatment (e.g., to achieve groundwater containment, to achieve MCL).

Event date: 12/01/1988
Event: Stabilization Construction Completed

Event date: 07/23/1990
Event: RFI Imposition

Event date: 07/23/1990
Event: CMS Imposition

Event date: 12/01/1991
Event: CMS Workplan Approved

Event date: 12/01/1991
Event: RFI Workplan Approved

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

Event date: 01/17/1995
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 01/01/1996
Event: CA Responsibility Referred To A Non-RCRA Federal Authority, Corrective Action at the facility or area referred to CERCLA.

Event date: 08/08/1996
Event: RFA Completed, Assessment was an RFA.

Event date: 01/13/1997
Event: CMS Approved

Event date: 01/13/1997
Event: Date For Remedy Selection (CM Imposed)

Event date: 01/13/1997
Event: RFI Approved

Event date: 04/08/1998
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 04/08/1998
Event: CA Responsibility Referred To A Non-RCRA Federal Authority

Event date: 04/08/1998
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 04/08/1998
Event: Current Human Exposures under Control, Current human exposures are NOT under control.

Event date: 05/22/2000
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 05/22/2000
Event: Current Human Exposures under Control, Current human exposures are NOT under control.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Summary Details:

Conditions at proposal July 14, 1989): Fort Ord covers 46 square miles on Monterey Bay approximately 5.6 miles north of Monterey, Monterey County, California. The installation is bordered by the City of Marina and the Salinas River to the north, El Toro Creek to the east, Seaside and Del Rey Oaks to the south, and Monterey Bay to the west. Fort Ord was established in 1917 as a maneuver area and field artillery target range for units then stationed at the Presidio of Monterey. Its primary mission now is training. Industrial operations at Fort Ord include vehicle maintenance areas, a battery charging/repair facility, photographic processing laboratories, spray painting operations, a plastics shop, laundry/dry cleaning facilities, vehicle wash racks, and a small arms repair shop. Chemicals and ha ardous wastes were managed and disposed of at Fort Ord. According to tests conducted by the Army in 1986, elevated levels of contaminants were detected in off-base ground water. The contamination is emanating from the base and may be contaminating the drinking water supplies of the City of Marina; however, the exact location of the source has not yet been identified. The contaminants includecarbon tetrachloride, tetrachloroethylene, trichloroethylene, 1,1,1-trichloroethane, and trans-1,2-dichloroethylene. An estimated 38,600 people obtain drinking water from wells within 3 miles of ha ardous substances on the fort. Ground water is also used for irrigation. In addition, soil and ground water are contaminated at the Fire Drill Area, where approximately 600 gallons of petroleum products have been spilled. Fort Ord has identified at least 18 other contamination problems.Fort Ord is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part of IRP, theArmy is implementing a sampling plan to investigate ground water contamination. The Army is treating contaminated soil and ground water at nearby Frit sche Army Airfield Fire Drill Area. Status February 21, 1990): IRP activities continue.

Site Description: The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. Environmental investigations began at Fort Ord in 1984 under the Regional Water Quality Control Board (RWQCB) cleanup or abatement orders. In 1986, further investigations began at Operable Unit 2 (OU2). In 1990, Fort Ord was placed on the National Priorities List (NPL) because of Volatile Organic Compounds (VOCs) found in ground water beneath OU2. A Federal Facility Agreement (FFA) was signed in 1990 by the Army, U.S. Environmental Protection Agency, the California Environmental Protection Agency's Department of Toxic Substances Control (DSTC)

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and Regional Water Quality control Board (RWQCB). The FFA established schedules for commencing Remedial Investigations and Feasibility Studies (RI/FS). In 1991, the basewide RI/FS began and Fort Ord was placed on the Base Realignment and Closure list. The final FS for OU2 was completed on October 1, 1993, and the Record of Decision (ROD) was signed in August 1994. An Interim Action Plug-In ROD was signed in March 1994 for excavation and treatment of shallow contaminated soils. The Draft and Draft Final Versions of the Basewide RI/FS were completed in August 1994 and December 1994, respectively.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Del Rey Oaks to the south and Marina to the north. The Southern Pacific Railroad and Highway 1 pass through the western portion of former Fort Ord, separating the beachfront from the rest of the base. Laguna Seca Recreation Area and Toro Regional Park border former Fort Ord to the south and southeast, respectively, as well as several small communities such as Toro Park Estates and San Benancio.There are three main developed areas within Fort Ord: the Main Garrison, the East Garrison and Fritzsche Army Airfield (FAAF). The Main Garrison contains commercial, residential, and light industrial facilities. The East Garrison occupies 350 acres on the northeastern edge of the base and consists of military and industrial support areas, recreationalfacilities, and recreational open space. The FAAF serves as the general airfield for Fort Ord. EPA placed the site on the National Priorities List in 1990. Several areas of contamination exist on site. Generally, chemicals present in soil are the result of former routine maintenance and support activities on Fort Ord. Such activities include: maintenance of military vehicles at wash racks, tank storage of chemicals such as waste oil, the use of oil/water separators in drainage areas, and pesticide use and storage. The facility contained leaking petroleum underground storage tanks, containers of waste oil and various automotive chemicals, chemical storage areas, oil-waste separators, target ranges, and landfills. One on-site area is a 150-acre landfill that was primarily used to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Recordof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms target ranges. Over 12,000 acres are suspected of containing ordnance and explosives (OE). In particular, the 8,000 acre Multi-Range Area (MRA) is known to contain dangerous unexploded ordnance. OE investigations are complicated by technological limitations and protected habitat that covers the area and requires special management pursuant to the base Habitat Management Plan (HMP). This includes the current requirement to use prescribed burns to clear vegetation prior to OE removal. The HMP currently restricts burns to 800 acres/year, thus requiring at least 10 years to address OE in the MRA.The aquifers at the site are called the upper aquifer and the 180-foot aquifer. Approximately 40,000 people obtain drinking water from wells located within 3 miles of the site.Since opening in 1917, Fort Ord served as a training and staging facility for Army infantry troops. No permanent improvements were made until the late 1930s when administrative buildings, barracks, mess halls, tent pads, and a sewage treatment plant were constructed. The Main Garrison was constructed between 1940 and the 1960s, starting in the northwest corner of the base and expanding southeastward. The FAAF was incorporated into Fort Ord in 1961. Since 1917, portions of the Installation were used by infantry units for maneuvers, target ranges, and other purposes. Ordnance and explosives (OE) that have been fired into, fired upon, or used on the facility include artillery and mortar projectiles, rockets

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and guided missiles, rifle and hand grenades, practice land mines, pyrotechnics, bombs, and demolition materials. A wide variety of conventional OE items have been located at sites throughout the former Fort Ord, including pyrotechnics and explosives.Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented in preparation for transfer and reuse of former Fort Ord property. The Ord Military Community, located within the Main Garrison portion of former Fort Ord, will be retained by the Army. Since base closure in September 1994, lands outside the Ord Military Community have been subjected to the reuse process. Some of the property on the installation has been transferred. A large portion of the Inland Training Ranges was assigned to the Bureau of Land Management (BLM). The other major recipient of Fort Ord property has been the California State University (CSU) system. The CSU Monterey campus is located on the site of the former Fort Ord and is expected to expand in the future. Other areas on the installation have been or will be transferred to federal, state, local, and private entities through economic development conveyance, public benefit conveyance, negotiated sale, or other means.The reuse of the former Fort Ord following transfer of property increases the possibility of the public beingexposed to explosive hazards. In November 1998, the Army agreed to evaluate OE at former Fort Ord in an OE Remedial Investigation/Feasibility Study (RI/FS) consistent with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). A Federal Facility Agreement (FFA) was signed in 1990 by the Army, EPA, and the California Environmental Protection Agency's Department of Toxic Substances control (DTSC; formerly the Department of Health Services or DHS). The FFA established schedules for performing remedial investigations and feasibility studies and requires that remedial actions be completed as expeditiously as possible. In April 2000, an agreement was signed between the Army, EPA and DTSC to evaluate OE at theformer Fort Ord subject to the provisions of the Fort Ord FFA.EPA OU-01: Fritzsche Army Airfield Fire Drill AreaAn investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wassigned in September 1995. Groundwater cleanup standards were established in the ROD which must be met through the existing pump and treat system. The selected remedy is consistent with the initial action described above. The groundwater treatment system was installed in 1988. In 2004, the Army awarded a fixed price contract for the management and completion of the groundwater cleanup remedy at Operable Unit 1.EPA OU-02: Fort Ord LandfillOne on-site area is a 150-acre landfill that was primarilyused to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Record of Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed.The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. In 1994, the Army completed an investigation focusing on groundwater andsoil contamination originating from the landfill. A Record of Decision (ROD) was signed in August 1994. The ROD included capping the landfill and installing a groundwater pump and treatment system. Construction of the groundwater treatment system is complete and is operational.In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

provide more clean land for re-use. The changes are documented in the Explanation of Significant Differences (ESD) in August 1996.The consolidation is complete and capping of the main landfill was completed in December 2002. The Army has installed an active landfill gas extraction and treatment system to capture and remediate methane andother volatile organic compound gases that are being generated by decaying materials in the landfill. The Army continues to monitor landfill gases to ensure that do not pose a health hazardEPA OU-03: Overall SiteIn 1990, the Army began further investigations into the nature and extent of on- and off-site soil and groundwater contamination, as well as any ecological or health threats that may be present. The investigation identified three waste disposal sites, firing ranges, and a vehicle maintenance area that require extensive cleanup actions. The Army completed the RI/FS and ROD in 1997, and all soil cleanup actions are complete, and groundwater pump and treatment systems are operational. The action included remediating the Sites 2/12 maintenance/disposal area by soil excavation and ongoing groundwater remediation, Sites 16/17 disposal area by soil excavation, Site 31 disposal area by soil excavation, and Site 39 small arms ranges by soil excavation. Most of the excavated soils were placed at the Fort Ord Landfill, which was closed in December 2002. The Army is currently evaluating treatment/disposal options for additional Site 39 soils to be excavated.Site 39, which includes the Multi-Range Area (MRA), was reportedly used sincethe early 1900s for small arms training and ordnance training exercises, including onshore naval gunfire. Over the years, in addition to small arms rounds, various types of ordnance have been used or found in the MRA, including hand grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, petroleum hydrocarbons, and other metals associated with training activities. Ordnance is being addressed through other remedial or removal actions.Site 39 comprises approximately 8,500 acres in the southern portion of Fort Ord. Site 39 is bounded byEucalyptus Road to the north, Barloy Canyon Road to the east, Boundary Road and South Boundary Road to the south, and General Jim Moore Blvd to the west.Results of the RI indicate the metals lead and beryllium, explosive compounds, and organic compounds are present in shallow soil above background concentrations in localized areas at Site 39, and are associated with past military training activities.Spent ammunition found at the Small Arms Ranges consists of bullets, black powder rifle balls, and lead shot. Lead is the primary chemical of concern in soil at the Small Arms Ranges at Site 39. In localized areas, spent ammunition is found on the ground surface.An Explanation of Significant Differences addressing OU 3 was completed in December2003.EPA OU-04: Surface SoilsEPA OU-05: No Action SoilsEPA OU-07: Site 3 Beach RangeSite 3 is situated within about 3.2 miles (780 acres) of dunes along the coastline of Monterey Bay at the western boundary of Fort Ord. Results of the investigation indicate lead from small arms is the main contaminant at the site. The site is also home of the Smith's Blue butterfly, an endangered species, and buckwheat plants which the butterflies use to lay their eggs on. In 1997, the Army completed a ROD allowing them to first clean up the lead contamination to address human health concerns by soil excavation and placement in the Fort Ord Landfill, which was simultaneously being remediated (capped). This cleanup was completed in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well.EPA OU-08: OE Track 0 (No Further Action)The Track 0 process addresses single or grouped areas of land at the former Fort Ord that have no history of OE-related use and for which No Action is necessary to protect human health and the environment. These areas consist largely of land that has been developed for military support or residential use throughout Fort Ord's history and areas

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

that have no physical or documented evidence of OE-related training. A Track 0 Special Case area includes a former landfill where OE scrap items were found buried with refuse. No OE-related activities occurred in the area and the OE scrap items and the refuse were entirely removed.Track 0 areas were grouped geographically: e.g., all non-OE land in the Main Garrison was grouped and discussed together as one area. Track 0 includes parcels in the following areas:- Highway 1 Area- Golf Course Maintenance Area- Brostrom Park Area- Patton/Abrams Park Housing Area- Open Space, Main Entrance Area- Surplus II Area- Fritzsche Army Airfield Area- East Garrison Area- Main Garrison Area- OU 2 Landfill Area- Reservation Road AreaTrack 0 sites were addressed by a No Further Action Record of Decision (ROD) dated July 2, 2002.The Army has been conducting military munitions sampling and removal actions at identified Munitions Response Sites (MRS) and will continue these actions to mitigate imminent MEC-related hazards to the public while gathering data about the type of military munitions and level of hazard at each of the sites for use in the base-wide MR RI/FS. The Army is performing its activities pursuant to the President's authority under the CERCLA Section 104, as delegated to the Army in accordance with Executive Order 12580 and in compliance withthe process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will continue to be involved. The Army is preparing the MR RI/FS for Fort Ord to address MEC-related hazards. The MR RI/FS will review and evaluate past investigative and removal actions, as well as recommend future response actions deemed necessary to protect human health and the environment on the basis of proposed reuses specified in the Fort Ord Reuse Authority (FORA) Reuse Plan.The information to be evaluated during the MR RI/FS will include site knowledge, the quality of the available information,work completed, and intended future land uses. The base-wide MR RI/FS will contain a comprehensive evaluation of all MEC-related data for the entire former Fort Ord and will evaluate long-term response alternatives for cleanup and risk management ofMEC.The MR RI/FS is organized as a "tracking" process whereby sites with similar characteristics will be grouped to expedite cleanup, reuse, and/or transfer based on current knowledge. The Track 0 Record of Decision (ROD) addresses areas on the former Fort Ord that have been identified as requiring no munitions response to protect human health (public safety) and the environment (Track 0 areas). Other Track (1 through 3) areas will be addressed separately for the other lands that have or are suspected to have a history of military munitions-related use and investigations completed to date. Track 1 sites were suspected to have been used for training with military munitions but for which no further response action is required because they fall into one of the three categories defined in Record of Decision, No Further Action Related to Munitions and Explosives of Concern-Track 1 Sites; No Further Remedial Action with Monitoring for Ecological Risks from Chemical Contamination at Site 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are known or suspected to be present, but MEC investigations have not yet been completed.All base-wide MR RI/FS documents have been or will be prepared in cooperation with the EPA and DTSC in accordance with the Fort Ord FFA; made available for public review and comment; and placed in the Administrative Record and local information repositories.A ROD addressing OU 8 was completed in 2002. An Explanation of Significant Difference (ESD) pertaining to the OU8 ROD was completed in April of 2005.EPA OU-09: OE Track 1Track 1 sites are sites where munitions and explosives of concern were suspected but no further remedial action was deemed necessary to protect human health and the environment. The Track 1 Proposed Plan was issued for public comment on September 15, 2004 and

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the ROD is scheduled to be signed in 2005.EPA OU-10: OE at Ranges 43-48, Range 30A, and Site OE-16Ranges 43-48 cover approximately 498 acres to the south of Eucalyptus Road in the south-central portion of the former Fort Ord. The majority of the site is designated as habitat reserve and will remain undeveloped (473 acres), and a limited portion of the site (25 acres) will be developed and reused.These ranges were part of the former Fort Ord's Multi-Range Area (MRA) and are categorized as firing ranges where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Ranges 43-48 mainly consists of central maritime chaparral (CMC)with some grassland areas.Training facilities maps indicate these ranges were used for a variety of live fire exercises from the 1940s through the 1990s. Records and recent field investigations indicate the ammunition used at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitank weapon (LAW); small arms; practice anti-personnel mines; dragon guided missiles; practice claymore mines; and fragmentation hand grenades.The former firing ranges contain sensitively fuzed, highly dangerous OE present on the ground surface or at shallow depths below the ground. As described above, numerous types of OE ranging from hand grenades to 90mm recoilless rifle rounds are known or suspected to be on the site. During recent limited surface removals in 2001, thousands of OE items were recovered at Ranges 43-48.This Interim Action site is adjacent to (less than 4,000 feet from) residential neighborhoods at Ord Military Community (Fitch and Marshall Parks) and is near the City of Seaside. The Fitch and Martin Luther King Jr. Middle Schools are located less than a mile from Ranges 43-48. Existing site security measures include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In the last three years, five documented incidents of persons trespassing into the Ranges 43-48 site occurred. In 1999, there were two documented cases of children entering the fenced MRA at Ranges44 and 45, and collecting and removing 40mm practice grenades found on the ground surface. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The majority of this Interim Action site is designated as habitat reserve and will remain undeveloped. Future reuse of Transfer Parcel E21b.3 is development.Range 30A includes approximately 388 acres located in the southeastern portion of the MRA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerFort Ord MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Range 30A mainly consists of CMC with somegrassland areas.Range 30A was constructed in 1990 as a 40mm machine gun range and was in use until 1993. According to the Fort Ord Training Ranges Standard Operating Procedure (SOP), the only weapon authorized for use at Range 30A from 1991 and 1992was the MK19 40mm machine gun, Mod 3. Ammunition authorized for use at Range 30A included HE, high explosive dual purpose (HEDP) and target practice (TP).Range 30A is known to contain sensitively fuzed, highly dangerous 40mm grenades and evidence of60mm and 81mm mortars and 37mm, 75mm, 155mm, and 8-inch projectiles. Limited surface removals in 2001 in the accessible areas of Range 30A have recovered hundreds of whole or partial OE and OE scrap items.The Range 30A Interim Action site is locatedin close proximity (approximately 2,200 feet north) to the Laguna Seca residential area and Laguna Seca Golf Course, and less than a mile from the Laguna Seca Raceway.

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

South Boundary Road, located approximately 2,000 feet to the south, is open to vehicular traffic during events at Laguna Seca Raceway and is always open to the public for jogging, hiking, and biking. This range was part of the former Fort Ord's MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Existing access deterrents include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), and three other incidents of fence damage were reported within 4,000 feet of the range (near Range 29). Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.As part of the closure of the former Fort Ord, the MRA will be transferred to the BLM and most of the MRA will remain undeveloped as habitat reserve. The habitat management plan (HMP) presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.Site OE-16 includes approximately 80 acres located immediately north of the former Fort Ord MRA, between Eucalyptus and Parker Flats roads and bounded by Watkins Gate Road to the east (Plate 5). This site will become habitat reserve and will remain undeveloped. The Bureau of Land Management (BLM) land (immediately adjacent) is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence. The site is posted with signs warning of the dangers associated with unexploded ordnance. Vegetation at Site OE-16 mainly consists of CMC with some grassland areas.Site OE-16 is a World War II (WWII) era rocket range, and is identified as a "bazooka practice" area on Fort Ord Training Facilities maps dating from 1945 and 1946. Available training maps after 1946 do not identify the bazooka practice area. According to Fort Ord Range Control, this range was probably used as an antitank rocket range during and shortly after WWII. Available information indicates that Site OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site was later used for a portion of time as an anti-armor training area. Evidence from the site indicates that both practice and HEAT rounds were used.Site OE-16 contains sensitively fuzed, highly dangerous OE, such as HEAT projectiles, present on the ground surface or at shallow depths below the ground. During recent limited surface removals in 2001, hundreds of OE items, including expended and live 2.36-inch rockets (practice and HEAT), practice antitank mines, rifle grenades, hand grenade fuzes, and OE scrap were recovered.Site OE-16 is located adjacent to the MRA and land that has been transferred to the BLM. The BLM land is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence posted with signs warning of the dangers associated with unexploded ordnance. The site is in close proximity to a residential neighborhood (Fitch Park) on the former Fort Ord. In 2001, an incident of persons trespassing withinthe MRA adjacent to Site OE-16 was reported. In addition, five incidents of trespassing into the MRA adjacent to Site OE-16 occurred within the last three years. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The land that includes Site OE-16 will be transferred to the BLM and will remain undeveloped as habitat reserve. The HMP for former Fort Ord presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.An Interim Action Record of Decision addressing OE at EPA OU-10 was signed in September 2002.The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acres was burned. The Army is studying the October 2003 burn to understand both what went right and what went wrong. Ordnance has been cleared from the surface of the entire burned area and subsurface clearance is ongoing. The next prescribed burn is scheduled to take place in 2005.OU-10 Track 2 Sites:Track 2 sites are sites where munitions and explosives of concern were found and a removal action was conducted to clean it up. The first of several Track 2 RI/FS reports is due to be issued in 2005 for the area of Fort Ord known as Parker Flats.EPA OU-11: OE Track 3Track 3 sites are sites where munitions and explosives of concern are known to be present but no cleanup has been conducted yet. The final Track 3 ROD is expected to be completed by 2007, with UXO cleanup work continuing for at least 10 years thereafter.EPA OU-12: Carbon Tetrachloride PlumeThe Army has initiated a remedial investigation/feasibility study of another area of groundwater contamination, the so-called "carbon tetrachloride plume operable unit", near the City of Marina. Contaminants slightly above regulatory standards have been found in offsite groundwater. This area of contamination is not being used for drinking water. Potential source areas are also being investigated. A soil vapor sampling and extraction system pilot study was conducted in 2004 to address the vadose zone above the carbon tetrachloride plume area. The pilot study was very successful and appears to have removed significant mass from the vadose zone. The Army expects to complete the draft Remedial Investigation/Feasibility Study Report for the carbon tetrachloride plume operable unit in 2005.OU 9:A list of the 21 Track 1 sites for which No Further Action Related to MEC is required is comprised of:MRS-1-Flame Thrower Range: The site is 25 acres in size, and is located in the northwestern part of former Fort Ord. MRS-1 is currently occupied by housing. Proposed reuse plans include residential development. Based on the literature review and sampling, the site appears to have been used for camouflage training, mine and booby trap training, non-firing mortar training, and flame thrower training. Most of this area has been used for military housing for over 40 years.MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housing. The site is currently undeveloped with proposed reuse plans to include development with reserve areas or development with restrictions. Review of training maps, aerial photographs, and other Fort Ord maps indicate mine and booby trap training occurred at the site. The adjacent areas have been used as a school and military housing for over 40 years.MRS-13A-Practice Mortar Range: The site is 61 acres in size, and is located in the northern portion of the former Fort Ord. Proposed reuse plans for MRS-13A include residential development and a park. The majority of the site has contained residential housing for nearly 30 years. The area was extensively graded in the 1970s and housing was built on portions of the site. The western portion of the site was used as a landfill in the 1960s. All landfill material in the western portion of MRS-13A was excavated (removed) and transported tothe main landfill south of Immix Road in the 1990s. Several munitions debris items and three unexploded ordnance (UXO) items were identified within and adjacent to MRS-13A during landfill excavation and housing development grading activities and were removed: three live ground signals and loose pyrotechnic material; three inert hand grenade primer detonators; two inert 40mm signal cartridges; an inert fin assembly for a 3.5-inch rocket; a live rifle grenade; miscellaneous projectiles; and two inert 3.5-inch rocket motors.MRS-20-Recoilless Rifle Training Range: The site is 7 acres in size, and is located in the southwestern portion of the Main Garrison near residential housing and Highway 1. This site is currently open space with

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

proposed reuse plans, which include development. The site was identified as a potential Recoilless Rifle Training Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in some cases, could be fired by either method.MRS-22 (Site 3)-Beach Trainfire Ranges: The site is 952 acres in size, and is located on the Monterey Baycoastline along the western margin of former Fort Ord as shown on Plate 2. The site is currently open space with the proposed reuse of the site to include a State park with open space and recreational areas. Training maps, aerial photographs, and interviews indicate the site was used as the Beach Trainfire Ranges from 1940s until base closure in 1994. The ranges contained 17 small arms firing ranges; an obstacle course; a bivouac area; a rifle instruction circle; a bayonet assault course; chemical, biological, and radiological (CBR) training areas; target detection training areas; an infiltration course; and a former ammunition supply point. CBR training at MRS-22 (Site 3) only involved training troops in the identification of targets while wearing gas masks, and did not involve the use of chemical, biological or radiological materials. Training at the Beach Trainfire Ranges reportedly also included occasional practice mortar use with inert training devices, amphibious assault landings, and battle demonstrations.MRS-24B-Practice Hand Grenade Range: The site is 14.2 acres in size, and is located in the west-central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the Impact Area. MRS-24B will continue to be used for military housing. Historical and sampling information indicate the site was used as practice hand grenade range in the 1940s.MRS-24D-Booby Traps: The site is 1.8 acres in size, and is located in the west central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as a "Booby Traps" and squad patrol training area based on review of a 1946 historical map; however, the site boundary was northwest of the area shown as "Booby Traps" on 1945 and 1946 training maps.MRS-24E-Practice Rifle Grenade Range: The site is 2.7 acres in size, and is located in the west central portion of former Fort Ord. The site is also located south of the Main Garrison and just north of the former Impact Area within a military housing complex. MRS-24E will continue to be used for military housing. MRS-24E was identified as a Practice Rifle Grenade Range on 1945/1946 training maps, but no evidence of this use was discovered during sampling at the site.MRS-27X-Training Site 24: The site is 79.5 acres in size, and is undeveloped open space located in the southeastern portion of former Fort Ord. MRS-27X is currently a habitat reserve area managed by the Bureau of Land Management (BLM), and is open to the public for recreational use. Based on review of Fort Ord training maps, the site was used as a troop training and maneuver area from the 1950s to 1970s, and as an overnight bivouac area and medical training area in the 1980s.MRS-27Y-Training Site 25: The site is 25 acres in size,and is mainly undeveloped open space located in the eastern portion of former Fort Ord along Inter-Garrison Road. A small portion of the site also lies on property that was transferred to California State University Monterey Bay in 1995 for development. The site was identified as one of 26 training sites within Fort Ord Training and Maneuver Areas used as troop training, maneuver, and overnight bivouac areas.MRS-32A-Oil Well Road Training Area: The site is 38 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as atank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and as a troop training and

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

maneuver area from 1950s to 1980s.MRS-32B-Oil Well Road Training Area II: The site is 47 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32B include maintaining the land as habitat reserve. Based on historical training maps (circa 1954 and 1956), it was identified as the "Oil Well Road Training Area"; a portion of the site was reportedly used as a Tank Gunnery Range in 1950s; and the site may also have been used for firing of shoulder-launched projectiles.MRS-39-Mine and Booby Trap Area: The site is 12.1 acres in size, and is located east of General Jim Moore Boulevard and south of Gigling Road in the Marshall Park housing area. MRS-39 will continue to be used for military housing. The site was identified as a Mine and Booby Trap Training Area on 1957/1958 maps.MRS-49-Former Rifle Grenade Range: The site is 28 acres in size, and is located in the west central portion of former Fort Ord, south of Main Garrison and just north of military housing. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a training area and rifle grenade range in the 1940s and 1950s based on interviews conducted during the Preliminary Assessment/Site Inspection (PA/SI) phase of the Fort Ord Archive Search.MRS-59A-Unnamed: The site is 41 acres in size, and is located in the eastern portion of former Fort Ord near the East Garrison and MRS-5. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a possible 2.36-inch rocket range during interviews conducted during the PA/SI phase of the Fort Ord Archive Search. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps.MRS-62-Laguna Seca Open Space: The site is 247 acres in size, and is located at the southern end of former Fort Ord. The site is currently open space andproposed reuse plans include development. The site was identified as a small arms and flare training area during an interview with a former Fort Ord Fire Chief conducted during the PA/SI phase of Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, the site was used as a troop training and maneuver area from the late 1940s through 1980s; and the southern half of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-62 lies within a larger area identified during interviews conducted as part of the Archives Search as "Area T" and was a described as a general area where training may have occurred. The boundary of MRS-62 is based on transfer parcel delineation and not on evidence of munitions use. The boundary of MRS-62 was established to correspond to with disposal Parcel L20.6. Although the size of the parcel to be transferred has changed over time, the boundary of MRS-62 corresponds with the current boundary of Parcel L20.6.MRS-63-Canyon Training Area: The site is 28 acres in size, and is located at the southern end of former Fort Ord east of MRS-62. MRS-63 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as a small arms and flare training area during the PA/SI phase of the Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, most of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators.MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majority of the site lies on property transferred to California State University Monterey Bay (CSUMB) that is currently used for student housing or is proposed for development. A small portion of the site lies on property that is designated as habitat reserve. The site was identified as a reported signal corps field training area during the PA/SI phase of Fort Ord Archive Search, and other uses included aviation

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

training, basic unit training, and a bivouac area from 1950s until housing construction in 1989.MRS-69-Unnamed: The site is 37 acres in size, and is undeveloped open space located on the eastern side of former Fort Ord. MRS-69 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as an area of possible rifle grenade use based on interviews with a former Fort Ord Fire Chief. This site is within land transferred to the BLM and is open to the public for hiking, biking, and horseback riding. Use is limited to marked trails. The public has had access to this area for approximately 6 years.MRS-70-Unnamed: The site is 14 acres in size, and is located on the southeastern side of former Fort Ord, south of Oil Well Road. The site is currently a habitat reserve area managed by BLM, and is open to the public for recreational use. The area encompassing MRS-70 was identified as containing firing berms based on interviews with a former Fort Ord Fire Chief.A ROD addressing OU 9 was completed in April 2005.Operable Unit 2:The Fort Ord Landfills area was designated as Operable Unit 2 (OU2) when a remedial investigation identified the presence of volatile organic compounds (VOCs) associated with landfilled materials in groundwater beneath the site. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated groundwater and ongoing remediation of groundwater associated with OU2 is being conducted in accordance with the OU2 Record of Decision (ROD) and the Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD).In accordance with the OU2 ROD and the Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills, the Army completed removal and consolidation of refuse from the north landfill into the main landfill in October 1998 and installation of an engineered cover system for the main landfill in December 2002 as part of the closure process for the Fort Ord Landfills.At the Fort Ord Landfills, the perimeter fence line was initially designated as the boundary for landfill gas (LFG) compliance monitoring in accordance with applicable or relevant and appropriate requirements (ARARS) and LFG monitoring probes were installed inside the fence line. Monitoring of these probes commenced in June 2000. Fixed-based laboratory results and field measurements showed methane concentration exceeding the 5% regulatory standard in most probes. The Army performed an additional investigation in August 2000 and sampling results showed that methane was detectable extending out about 70 feet front the fence line on the east side of Area F. All probes were monitored again in September and December 2000, with the results again showing methane concentrations exceeding the 5% standard. In response the Army installed additional probes at locations around the outer parts of the OU2 property beyond the fence line in April and May 2001. Analytical results for these probes indicated that methane concentrations at the property boundary were less than the 5% standard, with the exception of the east side of Area F.The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volatile organic compounds (VOCs) in air between the Fort Ord Landfills and the nearest housing. These data were used to complete a screening levelhuman health risk assessment (HHRA) for nearby residences. The HHRA was updated after each monitoring event and attached as an appendix to each ambient air monitoring report. The HHRA concluded that there is a health risk for long-term exposure to VOCs in ambient air; however, the Army determined the data evaluated in the HHRA were limited and additional monitoring would be appropriate. Additional ambient air monitoring was conducted on a quarterly basis in 2003 and the HHRA updated to include these data and evaluate specifically landfill-related risk. The updated HHRA indicated the Fort Ord Landfills are not a significant contributor of VOCs

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

in ambient air or risk to downwind receptors.The following remedies for the Fort Ord Landfills were selected in the OU2 ROD:- A cover system to (1) prevent rainwater from percolating through the landfilled areas into the underlying aquifers; (2) collect and remove methane offgas (if necessary); and (3) prevent exposure of sanitary waste in the landfills to the surrounding environment.- Institutional controls (i.e., deed restrictions) to be placed on the property to ensure that the integrity of the cover system is maintained and prevent potential direct exposures of VOCs to the environment or people associated with future use of the site.- Institutional controls (i.e., deed restrictions) that prevent the use of groundwater within the contaminant plume.- Groundwater extraction and treatment, to be monitored on a regular basis and adjusted as warranted by the performance data collected during operation. Additionally, treated groundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface.Three previous ESDsto the OU2 ROD have been completed:- Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD). The OU2 ESD finalized the cleanup standard for the Upper 180-foot Aquifer to be consistent with those of the A-aquifer to facilitate the coordinated cleanup strategy for both aquifers. - Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills (Area A ESD). The Area A ESD addressed excavation and consolidation of refuse from the north landfill (Area A) into the main landfill (Areas B through F).- Explanation of Significant Differences, Consolidation of Remediation Waste in a Corrective Action Management Unit, Operable Unit 2, Fort Ord Landfills (CAMU ESD). The CAMU ESD addressed using remediation waste as foundation layer material instead of "clean" (uncontaminated) soil as described in the OU2 ROD.An additional ESD addressing OU2 was completed in October of 2006.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Delof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms tarsives. Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented informer Fort Ord subject to the provisions of the Fort Ord FFA. EPA OU-01: Fritzsche Army Airfield Fire Drill Area An investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wter treatment system is complete and is operational. In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will provide more clean land for re-use. The changes are documented in the Explanation of Signd grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, p in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well. EPA OU-08: OE Track 0 (No Further Action)the process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will contite 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are kned at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitanA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), an OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site wd of Decision addressing OE at EPA OU-10 was signed in September 2002. Operable Unit 10: MRS-3 Based on the MRS-3 sampling results, a MEC removal to four feet bgs was recommended per the Final Phase I Engineering Evaluation/Cost Analysis (Phase I E MEC items were removed. In addition, 293 items were removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Most of the items found at MRS-4B were consistent with the reportt MRS-13B at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from burial pits included grenade and mine fuzes, firing devices, pyrotechnics (signal, illumination and smoke), rockets, rifle and hand smoke grenades, blasting caps,items found within MRS-27G were generally of the types associated with overnight bivouac training sites and general maneuver areas. Within MRS-27G's boundaries a small number of 75 millimeter (mm) and 37mm items were removed, inspected and determinedemoval to four feet bgs. This MRS was subsequently subdivided into 240 100- X 100-foot removal grids. An investigation for MEC was conducted using the Schonstedt Model GA-52/Cx magnetometer, with all detected MEC removed. 50 MEC items were removed. Iere removed. In addition, 149 pounds of debris was removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Of the 26 MEC items recovered, 2 munitions (a MK I 75mm Shrapnel prtems were non-penetrating (e.g., pyrotechnics, grenades, and grenade and projectile fuzes) munitions. The penetrating military munitions found included projectiles, rifle grenades, and rockets. Both DMM and MD were found in numerous burial pits thatated all detected anomalies at 52 100- X 100-foot grids using a Schonstedt Model GA-52/Cx magnetometer. During this investigation, 19 MEC items were removed. In addition, 453 pounds of debris was removed, inspected and determined not to pose an exploal pits were discovered during the removal conducted at MRS-53. Both DMM and MD were found in burial pits at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from these pits included fuzes (grenade, mine, time, and projectile), sich 1998, 23 100- X 200-foot grids were identified at MRS-55. Subsequently, 19 of these grids were surveyed using a Schonstedt Model GA-52/Cx magnetometer with a maximum search lane width of 5 feet. Following the survey, anomalies were selected for in). Other sources of future land use information include public benefit conveyance, negotiated sale requests, transfer documents, and the Installation-Wide Multispecies Habitat Management Plan for Former Fort Ord, California. The Reuse Plan identifiedin ground disturbing activities (e.g., during construction/excavation). A ROD addressing Operable Unit 10 was completed in August 2008. The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acresm Action in the Record of Decision, Interim Action for Ordnance and Explosives at Ranges 43-48, Range 30.A, and Site OE-16, Former Fort Ord, California (Interim Action ROD; .Army, 2002), and the implementation of MEC remediation under the Interim Acton tetrachloride (CT) detected in three different aquifers up to 550 feet below ground surface (bgs). No records exist to indicate exactly when, how often, or how much CT may have been used, stored, or disposed of; however, by delineating

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the areas od by the Marina Coast Water District (MCWD) and is pumped from wells that are located east of the OUCTP area screened in the Lower 180-Foot Aquifer. Based on groundwater monitoring data and data provided by the MCWD, these drinking water wells have nnd flame thrower training. Most of this area has been used for military housing for over 40 years. MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housTraining Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in soesidential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as aBooby Traps and squad patrol training area based on revied reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as a tank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and a. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps. MRS-62-L78 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majoritsite. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated grounof Area F. The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volroundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface. Three previous ESDs to the OU2 ROD have been completed: - Explanation of Significant Differences, Operable Unit 2, Fort O

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008

Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Corrective Action Summary:

Event date: 04/01/1986
Event: CA049PA

Event date: 04/01/1986
Event: CA029SF

Event date: 06/01/1987
Event: CA049SI

Event date: 01/01/1988
Event: Stabilization Measures Implemented, Groundwater extraction and treatment (e.g., to achieve groundwater containment, to achieve MCL).

Event date: 12/01/1988
Event: Stabilization Construction Completed

Event date: 07/23/1990
Event: RFI Imposition

Event date: 07/23/1990
Event: CMS Imposition

Event date: 12/01/1991
Event: CMS Workplan Approved

Event date: 12/01/1991
Event: RFI Workplan Approved

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

Event date: 01/17/1995
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 01/01/1996
Event: CA Responsibility Referred To A Non-RCRA Federal Authority, Corrective Action at the facility or area referred to CERCLA.

Event date: 08/08/1996
Event: RFA Completed, Assessment was an RFA.

Event date: 01/13/1997
Event: CMS Approved

Event date: 01/13/1997
Event: Date For Remedy Selection (CM Imposed)

Event date: 01/13/1997
Event: RFI Approved

Event date: 04/08/1998
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 04/08/1998
Event: CA Responsibility Referred To A Non-RCRA Federal Authority

Event date: 04/08/1998
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 04/08/1998
Event: Current Human Exposures under Control, Current human exposures are NOT under control.

Event date: 05/22/2000
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 05/22/2000
Event: Current Human Exposures under Control, Current human exposures are NOT under control.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility name: SERVICE STATION - 135571
Site name: RETAIL SHELL SERVICE STATION
Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

3030 DEL MONTE BOULEVARD **N/A**
MARINA, CA 93933

FINDS:

Registry ID: 110013972460

Environmental Interest/Information System
The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Registry ID: 110002663234

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order

Map ID	Site	Database(s)	EPA ID Number

MONTEREY REGIONAL WASTE MANAGE (Continued) **S100868500**

should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Summary Details:

Conditions at proposal July 14, 1989): Fort Ord covers 46 square miles on Monterey Bay approximately 5.6 miles north of Monterey, Monterey County, California. The installation is bordered by the City of Marina and the Salinas River to the north, El Toro Creek to the east, Seaside and Del Rey Oaks to the south, and Monterey Bay to the west. Fort Ord was established in 1917 as a maneuver area and field artillery target range for units then stationed at the Presidio of Monterey. Its primary mission now is training. Industrial operations at Fort Ord include vehicle maintenance areas, a battery charging/repair facility, photographic processing laboratories, spray painting operations, a plastics shop, laundry/dry cleaning facilities, vehicle wash racks, and a small arms repair shop. Chemicals and ha ardous wastes were managed and disposed of at Fort Ord. According to tests conducted by the Army in 1986, elevated levels of contaminants were detected in off-base ground water. The contamination is emanating from the base and may be contaminating the drinking water supplies of the City of Marina; however, the exact location of the source has not yet been identified. The contaminants includecarbon tetrachloride, tetrachloroethylene, trichloroethylene, 1,1,1-trichloroethane, and trans-1,2-dichloroethylene. An estimated 38,600 people obtain drinking water from wells within 3 miles of ha ardous substances on the fort. Ground water is also used for irrigation. In addition, soil and ground water are contaminated at the Fire Drill Area, where approximately 600 gallons of petroleum products have been spilled. Fort Ord has identified at least 18 other contamination problems.Fort Ord is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part of IRP, theArmy is implementing a sampling plan to investigate ground water contamination. The Army is treating contaminated soil and ground water at nearby Frit sche Army Airfield Fire Drill Area. Status February 21, 1990): IRP activities continue.

Site Description: The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. Environmental investigations began at Fort Ord in 1984 under the Regional Water Quality Control Board (RWQCB) cleanup or abatement orders. In 1986, further investigations began at Operable Unit 2 (OU2). In 1990, Fort Ord was placed on the National Priorities List (NPL) because of Volatile Organic Compounds (VOCs) found in ground water beneath OU2. A Federal Facility Agreement (FFA) was signed in 1990 by the Army, U.S. Environmental Protection Agency, the California Environmental Protection Agency's Department of Toxic Substances Control (DSTC)

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and Regional Water Quality control Board (RWQCB). The FFA established schedules for commencing Remedial Investigations and Feasibility Studies (RI/FS). In 1991, the basewide RI/FS began and Fort Ord was placed on the Base Realignment and Closure list. The final FS for OU2 was completed on October 1, 1993, and the Record of Decision (ROD) was signed in August 1994. An Interim Action Plug-In ROD was signed in March 1994 for excavation and treatment of shallow contaminated soils. The Draft and Draft Final Versions of the Basewide RI/FS were completed in August 1994 and December 1994, respectively.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Del Rey Oaks to the south and Marina to the north. The Southern Pacific Railroad and Highway 1 pass through the western portion of former Fort Ord, separating the beachfront from the rest of the base. Laguna Seca Recreation Area and Toro Regional Park border former Fort Ord to the south and southeast, respectively, as well as several small communities such as Toro Park Estates and San Benancio.There are three main developed areas within Fort Ord: the Main Garrison, the East Garrison and Fritzsche Army Airfield (FAAF). The Main Garrison contains commercial, residential, and light industrial facilities. The East Garrison occupies 350 acres on the northeastern edge of the base and consists of military and industrial support areas, recreationalfacilities, and recreational open space. The FAAF serves as the general airfield for Fort Ord. EPA placed the site on the National Priorities List in 1990. Several areas of contamination exist on site. Generally, chemicals present in soil are the result of former routine maintenance and support activities on Fort Ord. Such activities include: maintenance of military vehicles at wash racks, tank storage of chemicals such as waste oil, the use of oil/water separators in drainage areas, and pesticide use and storage. The facility contained leaking petroleum underground storage tanks, containers of waste oil and various automotive chemicals, chemical storage areas, oil-waste separators, target ranges, and landfills. One on-site area is a 150-acre landfill that was primarily used to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Recordof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms target ranges. Over 12,000 acres are suspected of containing ordnance and explosives (OE). In particular, the 8,000 acre Multi-Range Area (MRA) is known to contain dangerous unexploded ordnance. OE investigations are complicated by technological limitations and protected habitat that covers the area and requires special management pursuant to the base Habitat Management Plan (HMP). This includes the current requirement to use prescribed burns to clear vegetation prior to OE removal. The HMP currently restricts burns to 800 acres/year, thus requiring at least 10 years to address OE in the MRA.The aquifers at the site are called the upper aquifer and the 180-foot aquifer. Approximately 40,000 people obtain drinking water from wells located within 3 miles of the site.Since opening in 1917, Fort Ord served as a training and staging facility for Army infantry troops. No permanent improvements were made until the late 1930s when administrative buildings, barracks, mess halls, tent pads, and a sewage treatment plant were constructed. The Main Garrison was constructed between 1940 and the 1960s, starting in the northwest corner of the base and expanding southeastward. The FAAF was incorporated into Fort Ord in 1961. Since 1917, portions of the Installation were used by infantry units for maneuvers, target ranges, and other purposes. Ordnance and explosives (OE) that have been fired into, fired upon, or used on the facility include artillery and mortar projectiles, rockets

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and guided missiles, rifle and hand grenades, practice land mines, pyrotechnics, bombs, and demolition materials. A wide variety of conventional OE items have been located at sites throughout the former Fort Ord, including pyrotechnics and explosives.Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented in preparation for transfer and reuse of former Fort Ord property. The Ord Military Community, located within the Main Garrison portion of former Fort Ord, will be retained by the Army. Since base closure in September 1994, lands outside the Ord Military Community have been subjected to the reuse process. Some of the property on the installation has been transferred. A large portion of the Inland Training Ranges was assigned to the Bureau of Land Management (BLM). The other major recipient of Fort Ord property has been the California State University (CSU) system. The CSU Monterey campus is located on the site of the former Fort Ord and is expected to expand in the future. Other areas on the installation have been or will be transferred to federal, state, local, and private entities through economic development conveyance, public benefit conveyance, negotiated sale, or other means.The reuse of the former Fort Ord following transfer of property increases the possibility of the public beingexposed to explosive hazards. In November 1998, the Army agreed to evaluate OE at former Fort Ord in an OE Remedial Investigation/Feasibility Study (RI/FS) consistent with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). A Federal Facility Agreement (FFA) was signed in 1990 by the Army, EPA, and the California Environmental Protection Agency's Department of Toxic Substances control (DTSC; formerly the Department of Health Services or DHS). The FFA established schedules for performing remedial investigations and feasibility studies and requires that remedial actions be completed as expeditiously as possible. In April 2000, an agreement was signed between the Army, EPA and DTSC to evaluate OE at theformer Fort Ord subject to the provisions of the Fort Ord FFA.EPA OU-01: Fritzsche Army Airfield Fire Drill AreaAn investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wassigned in September 1995. Groundwater cleanup standards were established in the ROD which must be met through the existing pump and treat system. The selected remedy is consistent with the initial action described above. The groundwater treatment system was installed in 1988. In 2004, the Army awarded a fixed price contract for the management and completion of the groundwater cleanup remedy at Operable Unit 1.EPA OU-02: Fort Ord LandfillOne on-site area is a 150-acre landfill that was primarilyused to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Record of Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed.The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. In 1994, the Army completed an investigation focusing on groundwater andsoil contamination originating from the landfill. A Record of Decision (ROD) was signed in August 1994. The ROD included capping the landfill and installing a groundwater pump and treatment system. Construction of the groundwater treatment system is complete and is operational.In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

provide more clean land for re-use. The changes are documented in the Explanation of Significant Differences (ESD) in August 1996.The consolidation is complete and capping of the main landfill was completed in December 2002. The Army has installed an active landfill gas extraction and treatment system to capture and remediate methane andother volatile organic compound gases that are being generated by decaying materials in the landfill. The Army continues to monitor landfill gases to ensure that do not pose a health hazardEPA OU-03: Overall SiteIn 1990, the Army began further investigations into the nature and extent of on- and off-site soil and groundwater contamination, as well as any ecological or health threats that may be present. The investigation identified three waste disposal sites, firing ranges, and a vehicle maintenance area that require extensive cleanup actions. The Army completed the RI/FS and ROD in 1997, and all soil cleanup actions are complete, and groundwater pump and treatment systems are operational. The action included remediating the Sites 2/12 maintenance/disposal area by soil excavation and ongoing groundwater remediation, Sites 16/17 disposal area by soil excavation, Site 31 disposal area by soil excavation, and Site 39 small arms ranges by soil excavation. Most of the excavated soils were placed at the Fort Ord Landfill, which was closed in December 2002. The Army is currently evaluating treatment/disposal options for additional Site 39 soils to be excavated.Site 39, which includes the Multi-Range Area (MRA), was reportedly used sincethe early 1900s for small arms training and ordnance training exercises, including onshore naval gunfire. Over the years, in addition to small arms rounds, various types of ordnance have been used or found in the MRA, including hand grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, petroleum hydrocarbons, and other metals associated with training activities. Ordnance is being addressed through other remedial or removal actions.Site 39 comprises approximately 8,500 acres in the southern portion of Fort Ord. Site 39 is bounded byEucalyptus Road to the north, Barloy Canyon Road to the east, Boundary Road and South Boundary Road to the south, and General Jim Moore Blvd to the west.Results of the RI indicate the metals lead and beryllium, explosive compounds, and organic compounds are present in shallow soil above background concentrations in localized areas at Site 39, and are associated with past military training activities.Spent ammunition found at the Small Arms Ranges consists of bullets, black powder rifle balls, and lead shot. Lead is the primary chemical of concern in soil at the Small Arms Ranges at Site 39. In localized areas, spent ammunition is found on the ground surface.An Explanation of Significant Differences addressing OU 3 was completed in December2003.EPA OU-04: Surface SoilsEPA OU-05: No Action SoilsEPA OU-07: Site 3 Beach RangeSite 3 is situated within about 3.2 miles (780 acres) of dunes along the coastline of Monterey Bay at the western boundary of Fort Ord. Results of the investigation indicate lead from small arms is the main contaminant at the site. The site is also home of the Smith's Blue butterfly, an endangered species, and buckwheat plants which the butterflies use to lay their eggs on. In 1997, the Army completed a ROD allowing them to first clean up the lead contamination to address human health concerns by soil excavation and placement in the Fort Ord Landfill, which was simultaneously being remediated (capped). This cleanup was completed in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well.EPA OU-08: OE Track 0 (No Further Action)The Track 0 process addresses single or grouped areas of land at the former Fort Ord that have no history of OE-related use and for which No Action is necessary to protect human health and the environment. These areas consist largely of land that has been developed for military support or residential use throughout Fort Ord's history and areas

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

that have no physical or documented evidence of OE-related training. A Track 0 Special Case area includes a former landfill where OE scrap items were found buried with refuse. No OE-related activities occurred in the area and the OE scrap items and the refuse were entirely removed.Track 0 areas were grouped geographically: e.g., all non-OE land in the Main Garrison was grouped and discussed together as one area. Track 0 includes parcels in the following areas:- Highway 1 Area- Golf Course Maintenance Area- Brostrom Park Area- Patton/Abrams Park Housing Area- Open Space, Main Entrance Area- Surplus II Area- Fritzsche Army Airfield Area- East Garrison Area- Main Garrison Area- OU 2 Landfill Area- Reservation Road AreaTrack 0 sites were addressed by a No Further Action Record of Decision (ROD) dated July 2, 2002.The Army has been conducting military munitions sampling and removal actions at identified Munitions Response Sites (MRS) and will continue these actions to mitigate imminent MEC-related hazards to the public while gathering data about the type of military munitions and level of hazard at each of the sites for use in the base-wide MR RI/FS. The Army is performing its activities pursuant to the President's authority under the CERCLA Section 104, as delegated to the Army in accordance with Executive Order 12580 and in compliance withthe process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will continue to be involved. The Army is preparing the MR RI/FS for Fort Ord to address MEC-related hazards. The MR RI/FS will review and evaluate past investigative and removal actions, as well as recommend future response actions deemed necessary to protect human health and the environment on the basis of proposed reuses specified in the Fort Ord Reuse Authority (FORA) Reuse Plan.The information to be evaluated during the MR RI/FS will include site knowledge, the quality of the available information,work completed, and intended future land uses. The base-wide MR RI/FS will contain a comprehensive evaluation of all MEC-related data for the entire former Fort Ord and will evaluate long-term response alternatives for cleanup and risk management ofMEC.The MR RI/FS is organized as a "tracking" process whereby sites with similar characteristics will be grouped to expedite cleanup, reuse, and/or transfer based on current knowledge. The Track 0 Record of Decision (ROD) addresses areas on the former Fort Ord that have been identified as requiring no munitions response to protect human health (public safety) and the environment (Track 0 areas). Other Track (1 through 3) areas will be addressed separately for the other lands that have or are suspected to have a history of military munitions-related use and investigations completed to date. Track 1 sites were suspected to have been used for training with military munitions but for which no further response action is required because they fall into one of the three categories defined in Record of Decision, No Further Action Related to Munitions and Explosives of Concern-Track 1 Sites; No Further Remedial Action with Monitoring for Ecological Risks from Chemical Contamination at Site 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are known or suspected to be present, but MEC investigations have not yet been completed.All base-wide MR RI/FS documents have been or will be prepared in cooperation with the EPA and DTSC in accordance with the Fort Ord FFA; made available for public review and comment; and placed in the Administrative Record and local information repositories.A ROD addressing OU 8 was completed in 2002. An Explanation of Significant Difference (ESD) pertaining to the OU8 ROD was completed in April of 2005.EPA OU-09: OE Track 1Track 1 sites are sites where munitions and explosives of concern were suspected but no further remedial action was deemed necessary to protect human health and the environment. The Track 1 Proposed Plan was issued for public comment on September 15, 2004 and

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the ROD is scheduled to be signed in 2005.EPA OU-10: OE at Ranges 43-48, Range 30A, and Site OE-16Ranges 43-48 cover approximately 498 acres to the south of Eucalyptus Road in the south-central portion of the former Fort Ord. The majority of the site is designated as habitat reserve and will remain undeveloped (473 acres), and a limited portion of the site (25 acres) will be developed and reused.These ranges were part of the former Fort Ord's Multi-Range Area (MRA) and are categorized as firing ranges where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Ranges 43-48 mainly consists of central maritime chaparral (CMC)with some grassland areas.Training facilities maps indicate these ranges were used for a variety of live fire exercises from the 1940s through the 1990s. Records and recent field investigations indicate the ammunition used at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitank weapon (LAW); small arms; practice anti-personnel mines; dragon guided missiles; practice claymore mines; and fragmentation hand grenades.The former firing ranges contain sensitively fuzed, highly dangerous OE present on the ground surface or at shallow depths below the ground. As described above, numerous types of OE ranging from hand grenades to 90mm recoilless rifle rounds are known or suspected to be on the site. During recent limited surface removals in 2001, thousands of OE items were recovered at Ranges 43-48.This Interim Action site is adjacent to (less than 4,000 feet from) residential neighborhoods at Ord Military Community (Fitch and Marshall Parks) and is near the City of Seaside. The Fitch and Martin Luther King Jr. Middle Schools are located less than a mile from Ranges 43-48. Existing site security measures include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In the last three years, five documented incidents of persons trespassing into the Ranges 43-48 site occurred. In 1999, there were two documented cases of children entering the fenced MRA at Ranges44 and 45, and collecting and removing 40mm practice grenades found on the ground surface. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The majority of this Interim Action site is designated as habitat reserve and will remain undeveloped. Future reuse of Transfer Parcel E21b.3 is development.Range 30A includes approximately 388 acres located in the southeastern portion of the MRA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerFort Ord MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Range 30A mainly consists of CMC with somegrassland areas.Range 30A was constructed in 1990 as a 40mm machine gun range and was in use until 1993. According to the Fort Ord Training Ranges Standard Operating Procedure (SOP), the only weapon authorized for use at Range 30A from 1991 and 1992was the MK19 40mm machine gun, Mod 3. Ammunition authorized for use at Range 30A included HE, high explosive dual purpose (HEDP) and target practice (TP).Range 30A is known to contain sensitively fuzed, highly dangerous 40mm grenades and evidence of60mm and 81mm mortars and 37mm, 75mm, 155mm, and 8-inch projectiles. Limited surface removals in 2001 in the accessible areas of Range 30A have recovered hundreds of whole or partial OE and OE scrap items.The Range 30A Interim Action site is locatedin close proximity (approximately 2,200 feet north) to the Laguna Seca residential area and Laguna Seca Golf Course, and less than a mile from the Laguna Seca Raceway.

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

South Boundary Road, located approximately 2,000 feet to the south, is open to vehicular traffic during events at Laguna Seca Raceway and is always open to the public for jogging, hiking, and biking. This range was part of the former Fort Ord's MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Existing access deterrents include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), and three other incidents of fence damage were reported within 4,000 feet of the range (near Range 29). Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.As part of the closure of the former Fort Ord, the MRA will be transferred to the BLM and most of the MRA will remain undeveloped as habitat reserve. The habitat management plan (HMP) presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.Site OE-16 includes approximately 80 acres located immediately north of the former Fort Ord MRA, between Eucalyptus and Parker Flats roads and bounded by Watkins Gate Road to the east (Plate 5). This site will become habitat reserve and will remain undeveloped. The Bureau of Land Management (BLM) land (immediately adjacent) is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence. The site is posted with signs warning of the dangers associated with unexploded ordnance. Vegetation at Site OE-16 mainly consists of CMC with some grassland areas.Site OE-16 is a World War II (WWII) era rocket range, and is identified as a "bazooka practice" area on Fort Ord Training Facilities maps dating from 1945 and 1946. Available training maps after 1946 do not identify the bazooka practice area. According to Fort Ord Range Control, this range was probably used as an antitank rocket range during and shortly after WWII. Available information indicates that Site OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site was later used for a portion of time as an anti-armor training area. Evidence from the site indicates that both practice and HEAT rounds were used.Site OE-16 contains sensitively fuzed, highly dangerous OE, such as HEAT projectiles, present on the ground surface or at shallow depths below the ground. During recent limited surface removals in 2001, hundreds of OE items, including expended and live 2.36-inch rockets (practice and HEAT), practice antitank mines, rifle grenades, hand grenade fuzes, and OE scrap were recovered.Site OE-16 is located adjacent to the MRA and land that has been transferred to the BLM. The BLM land is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence posted with signs warning of the dangers associated with unexploded ordnance. The site is in close proximity to a residential neighborhood (Fitch Park) on the former Fort Ord. In 2001, an incident of persons trespassing withinthe MRA adjacent to Site OE-16 was reported. In addition, five incidents of trespassing into the MRA adjacent to Site OE-16 occurred within the last three years. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The land that includes Site OE-16 will be transferred to the BLM and will remain undeveloped as habitat reserve. The HMP for former Fort Ord presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.An Interim Action Record of Decision addressing OE at EPA OU-10 was signed in September 2002.The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acres was burned. The Army is studying the October 2003 burn to understand both what went right and what went wrong. Ordnance has been cleared from the surface of the entire burned area and subsurface clearance is ongoing. The next prescribed burn is scheduled to take place in 2005.OU-10 Track 2 Sites:Track 2 sites are sites where munitions and explosives of concern were found and a removal action was conducted to clean it up. The first of several Track 2 RI/FS reports is due to be issued in 2005 for the area of Fort Ord known as Parker Flats.EPA OU-11: OE Track 3Track 3 sites are sites where munitions and explosives of concern are known to be present but no cleanup has been conducted yet. The final Track 3 ROD is expected to be completed by 2007, with UXO cleanup work continuing for at least 10 years thereafter.EPA OU-12: Carbon Tetrachloride PlumeThe Army has initiated a remedial investigation/feasibility study of another area of groundwater contamination, the so-called "carbon tetrachloride plume operable unit", near the City of Marina. Contaminants slightly above regulatory standards have been found in offsite groundwater. This area of contamination is not being used for drinking water. Potential source areas are also being investigated. A soil vapor sampling and extraction system pilot study was conducted in 2004 to address the vadose zone above the carbon tetrachloride plume area. The pilot study was very successful and appears to have removed significant mass from the vadose zone. The Army expects to complete the draft Remedial Investigation/Feasibility Study Report for the carbon tetrachloride plume operable unit in 2005.OU 9:A list of the 21 Track 1 sites for which No Further Action Related to MEC is required is comprised of:MRS-1-Flame Thrower Range: The site is 25 acres in size, and is located in the northwestern part of former Fort Ord. MRS-1 is currently occupied by housing. Proposed reuse plans include residential development. Based on the literature review and sampling, the site appears to have been used for camouflage training, mine and booby trap training, non-firing mortar training, and flame thrower training. Most of this area has been used for military housing for over 40 years.MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housing. The site is currently undeveloped with proposed reuse plans to include development with reserve areas or development with restrictions. Review of training maps, aerial photographs, and other Fort Ord maps indicate mine and booby trap training occurred at the site. The adjacent areas have been used as a school and military housing for over 40 years.MRS-13A-Practice Mortar Range: The site is 61 acres in size, and is located in the northern portion of the former Fort Ord. Proposed reuse plans for MRS-13A include residential development and a park. The majority of the site has contained residential housing for nearly 30 years. The area was extensively graded in the 1970s and housing was built on portions of the site. The western portion of the site was used as a landfill in the 1960s. All landfill material in the western portion of MRS-13A was excavated (removed) and transported tothe main landfill south of Immix Road in the 1990s. Several munitions debris items and three unexploded ordnance (UXO) items were identified within and adjacent to MRS-13A during landfill excavation and housing development grading activities and were removed: three live ground signals and loose pyrotechnic material; three inert hand grenade primer detonators; two inert 40mm signal cartridges; an inert fin assembly for a 3.5-inch rocket; a live rifle grenade; miscellaneous projectiles; and two inert 3.5-inch rocket motors.MRS-20-Recoilless Rifle Training Range: The site is 7 acres in size, and is located in the southwestern portion of the Main Garrison near residential housing and Highway 1. This site is currently open space with

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

proposed reuse plans, which include development. The site was identified as a potential Recoilless Rifle Training Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in some cases, could be fired by either method.MRS-22 (Site 3)-Beach Trainfire Ranges: The site is 952 acres in size, and is located on the Monterey Baycoastline along the western margin of former Fort Ord as shown on Plate 2. The site is currently open space with the proposed reuse of the site to include a State park with open space and recreational areas. Training maps, aerial photographs, and interviews indicate the site was used as the Beach Trainfire Ranges from 1940s until base closure in 1994. The ranges contained 17 small arms firing ranges; an obstacle course; a bivouac area; a rifle instruction circle; a bayonet assault course; chemical, biological, and radiological (CBR) training areas; target detection training areas; an infiltration course; and a former ammunition supply point. CBR training at MRS-22 (Site 3) only involved training troops in the identification of targets while wearing gas masks, and did not involve the use of chemical, biological or radiological materials. Training at the Beach Trainfire Ranges reportedly also included occasional practice mortar use with inert training devices, amphibious assault landings, and battle demonstrations.MRS-24B-Practice Hand Grenade Range: The site is 14.2 acres in size, and is located in the west-central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the Impact Area. MRS-24B will continue to be used for military housing. Historical and sampling information indicate the site was used as practice hand grenade range in the 1940s.MRS-24D-Booby Traps: The site is 1.8 acres in size, and is located in the west central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as a "Booby Traps" and squad patrol training area based on review of a 1946 historical map; however, the site boundary was northwest of the area shown as "Booby Traps" on 1945 and 1946 training maps.MRS-24E-Practice Rifle Grenade Range: The site is 2.7 acres in size, and is located in the west central portion of former Fort Ord. The site is also located south of the Main Garrison and just north of the former Impact Area within a military housing complex. MRS-24E will continue to be used for military housing. MRS-24E was identified as a Practice Rifle Grenade Range on 1945/1946 training maps, but no evidence of this use was discovered during sampling at the site.MRS-27X-Training Site 24: The site is 79.5 acres in size, and is undeveloped open space located in the southeastern portion of former Fort Ord. MRS-27X is currently a habitat reserve area managed by the Bureau of Land Management (BLM), and is open to the public for recreational use. Based on review of Fort Ord training maps, the site was used as a troop training and maneuver area from the 1950s to 1970s, and as an overnight bivouac area and medical training area in the 1980s.MRS-27Y-Training Site 25: The site is 25 acres in size,and is mainly undeveloped open space located in the eastern portion of former Fort Ord along Inter-Garrison Road. A small portion of the site also lies on property that was transferred to California State University Monterey Bay in 1995 for development. The site was identified as one of 26 training sites within Fort Ord Training and Maneuver Areas used as troop training, maneuver, and overnight bivouac areas.MRS-32A-Oil Well Road Training Area: The site is 38 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as atank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and as a troop training and

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

maneuver area from 1950s to 1980s.MRS-32B-Oil Well Road Training Area II: The site is 47 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32B include maintaining the land as habitat reserve. Based on historical training maps (circa 1954 and 1956), it was identified as the "Oil Well Road Training Area"; a portion of the site was reportedly used as a Tank Gunnery Range in 1950s; and the site may also have been used for firing of shoulder-launched projectiles.MRS-39-Mine and Booby Trap Area: The site is 12.1 acres in size, and is located east of General Jim Moore Boulevard and south of Gigling Road in the Marshall Park housing area. MRS-39 will continue to be used for military housing. The site was identified as a Mine and Booby Trap Training Area on 1957/1958 maps.MRS-49-Former Rifle Grenade Range: The site is 28 acres in size, and is located in the west central portion of former Fort Ord, south of Main Garrison and just north of military housing. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a training area and rifle grenade range in the 1940s and 1950s based on interviews conducted during the Preliminary Assessment/Site Inspection (PA/SI) phase of the Fort Ord Archive Search.MRS-59A-Unnamed: The site is 41 acres in size, and is located in the eastern portion of former Fort Ord near the East Garrison and MRS-5. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a possible 2.36-inch rocket range during interviews conducted during the PA/SI phase of the Fort Ord Archive Search. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps.MRS-62-Laguna Seca Open Space: The site is 247 acres in size, and is located at the southern end of former Fort Ord. The site is currently open space andproposed reuse plans include development. The site was identified as a small arms and flare training area during an interview with a former Fort Ord Fire Chief conducted during the PA/SI phase of Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, the site was used as a troop training and maneuver area from the late 1940s through 1980s; and the southern half of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-62 lies within a larger area identified during interviews conducted as part of the Archives Search as "Area T" and was a described as a general area where training may have occurred. The boundary of MRS-62 is based on transfer parcel delineation and not on evidence of munitions use. The boundary of MRS-62 was established to correspond to with disposal Parcel L20.6. Although the size of the parcel to be transferred has changed over time, the boundary of MRS-62 corresponds with the current boundary of Parcel L20.6.MRS-63-Canyon Training Area: The site is 28 acres in size, and is located at the southern end of former Fort Ord east of MRS-62. MRS-63 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as a small arms and flare training area during the PA/SI phase of the Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, most of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators.MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majority of the site lies on property transferred to California State University Monterey Bay (CSUMB) that is currently used for student housing or is proposed for development. A small portion of the site lies on property that is designated as habitat reserve. The site was identified as a reported signal corps field training area during the PA/SI phase of Fort Ord Archive Search, and other uses included aviation

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

training, basic unit training, and a bivouac area from 1950s until housing construction in 1989.MRS-69-Unnamed: The site is 37 acres in size, and is undeveloped open space located on the eastern side of former Fort Ord. MRS-69 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as an area of possible rifle grenade use based on interviews with a former Fort Ord Fire Chief. This site is within land transferred to the BLM and is open to the public for hiking, biking, and horseback riding. Use is limited to marked trails. The public has had access to this area for approximately 6 years.MRS-70-Unnamed: The site is 14 acres in size, and is located on the southeastern side of former Fort Ord, south of Oil Well Road. The site is currently a habitat reserve area managed by BLM, and is open to the public for recreational use. The area encompassing MRS-70 was identified as containing firing berms based on interviews with a former Fort Ord Fire Chief.A ROD addressing OU 9 was completed in April 2005.Operable Unit 2:The Fort Ord Landfills area was designated as Operable Unit 2 (OU2) when a remedial investigation identified the presence of volatile organic compounds (VOCs) associated with landfilled materials in groundwater beneath the site. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated groundwater and ongoing remediation of groundwater associated with OU2 is being conducted in accordance with the OU2 Record of Decision (ROD) and the Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD).In accordance with the OU2 ROD and the Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills, the Army completed removal and consolidation of refuse from the north landfill into the main landfill in October 1998 and installation of an engineered cover system for the main landfill in December 2002 as part of the closure process for the Fort Ord Landfills.At the Fort Ord Landfills, the perimeter fence line was initially designated as the boundary for landfill gas (LFG) compliance monitoring in accordance with applicable or relevant and appropriate requirements (ARARS) and LFG monitoring probes were installed inside the fence line. Monitoring of these probes commenced in June 2000. Fixed-based laboratory results and field measurements showed methane concentration exceeding the 5% regulatory standard in most probes. The Army performed an additional investigation in August 2000 and sampling results showed that methane was detectable extending out about 70 feet front the fence line on the east side of Area F. All probes were monitored again in September and December 2000, with the results again showing methane concentrations exceeding the 5% standard. In response the Army installed additional probes at locations around the outer parts of the OU2 property beyond the fence line in April and May 2001. Analytical results for these probes indicated that methane concentrations at the property boundary were less than the 5% standard, with the exception of the east side of Area F.The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volatile organic compounds (VOCs) in air between the Fort Ord Landfills and the nearest housing. These data were used to complete a screening levelhuman health risk assessment (HHRA) for nearby residences. The HHRA was updated after each monitoring event and attached as an appendix to each ambient air monitoring report. The HHRA concluded that there is a health risk for long-term exposure to VOCs in ambient air; however, the Army determined the data evaluated in the HHRA were limited and additional monitoring would be appropriate. Additional ambient air monitoring was conducted on a quarterly basis in 2003 and the HHRA updated to include these data and evaluate specifically landfill-related risk. The updated HHRA indicated the Fort Ord Landfills are not a significant contributor of VOCs

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

in ambient air or risk to downwind receptors.The following remedies for the Fort Ord Landfills were selected in the OU2 ROD:- A cover system to (1) prevent rainwater from percolating through the landfilled areas into the underlying aquifers; (2) collect and remove methane offgas (if necessary); and (3) prevent exposure of sanitary waste in the landfills to the surrounding environment.- Institutional controls (i.e., deed restrictions) to be placed on the property to ensure that the integrity of the cover system is maintained and prevent potential direct exposures of VOCs to the environment or people associated with future use of the site.- Institutional controls (i.e., deed restrictions) that prevent the use of groundwater within the contaminant plume.- Groundwater extraction and treatment, to be monitored on a regular basis and adjusted as warranted by the performance data collected during operation. Additionally, treated groundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface.Three previous ESDsto the OU2 ROD have been completed:- Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD). The OU2 ESD finalized the cleanup standard for the Upper 180-foot Aquifer to be consistent with those of the A-aquifer to facilitate the coordinated cleanup strategy for both aquifers. - Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills (Area A ESD). The Area A ESD addressed excavation and consolidation of refuse from the north landfill (Area A) into the main landfill (Areas B through F).- Explanation of Significant Differences, Consolidation of Remediation Waste in a Corrective Action Management Unit, Operable Unit 2, Fort Ord Landfills (CAMU ESD). The CAMU ESD addressed using remediation waste as foundation layer material instead of "clean" (uncontaminated) soil as described in the OU2 ROD.An additional ESD addressing OU2 was completed in October of 2006.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Delof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms tarsives. Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented informer Fort Ord subject to the provisions of the Fort Ord FFA. EPA OU-01: Fritzsche Army Airfield Fire Drill Area An investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wter treatment system is complete and is operational. In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will provide more clean land for re-use. The changes are documented in the Explanation of Signd grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, p in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well. EPA OU-08: OE Track 0 (No Further Action)the process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will contite 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are kned at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitanA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), an OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site wd of Decision addressing OE at EPA OU-10 was signed in September 2002. Operable Unit 10: MRS-3 Based on the MRS-3 sampling results, a MEC removal to four feet bgs was recommended per the Final Phase I Engineering Evaluation/Cost Analysis (Phase I E MEC items were removed. In addition, 293 items were removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Most of the items found at MRS-4B were consistent with the reportt MRS-13B at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from burial pits included grenade and mine fuzes, firing devices, pyrotechnics (signal, illumination and smoke), rockets, rifle and hand smoke grenades, blasting caps,items found within MRS-27G were generally of the types associated with overnight bivouac training sites and general maneuver areas. Within MRS-27G's boundaries a small number of 75 millimeter (mm) and 37mm items were removed, inspected and determinedemoval to four feet bgs. This MRS was subsequently subdivided into 240 100- X 100-foot removal grids. An investigation for MEC was conducted using the Schonstedt Model GA-52/Cx magnetometer, with all detected MEC removed. 50 MEC items were removed. Iere removed. In addition, 149 pounds of debris was removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Of the 26 MEC items recovered, 2 munitions (a MK I 75mm Shrapnel prtems were non-penetrating (e.g., pyrotechnics, grenades, and grenade and projectile fuzes) munitions. The penetrating military munitions found included projectiles, rifle grenades, and rockets. Both DMM and MD were found in numerous burial pits thatated all detected anomalies at 52 100- X 100-foot grids using a Schonstedt Model GA-52/Cx magnetometer. During this investigation, 19 MEC items were removed. In addition, 453 pounds of debris was removed, inspected and determined not to pose an exploal pits were discovered during the removal conducted at MRS-53. Both DMM and MD were found in burial pits at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from these pits included fuzes (grenade, mine, time, and projectile), sich 1998, 23 100- X 200-foot grids were identified at MRS-55. Subsequently, 19 of these grids were surveyed using a Schonstedt Model GA-52/Cx magnetometer with a maximum search lane width of 5 feet. Following the survey, anomalies were selected for in). Other sources of future land use information include public benefit conveyance, negotiated sale requests, transfer documents, and the Installation-Wide Multispecies Habitat Management Plan for Former Fort Ord, California. The Reuse Plan identifiedin ground disturbing activities (e.g., during construction/excavation). A ROD addressing Operable Unit 10 was completed in August 2008. The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acresm Action in the Record of Decision, Interim Action for Ordnance and Explosives at Ranges 43-48, Range 30.A, and Site OE-16, Former Fort Ord, California (Interim Action ROD; .Army, 2002), and the implementation of MEC remediation under the Interim Acton tetrachloride (CT) detected in three different aquifers up to 550 feet below ground surface (bgs). No records exist to indicate exactly when, how often, or how much CT may have been used, stored, or disposed of; however, by delineating

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the areas od by the Marina Coast Water District (MCWD) and is pumped from wells that are located east of the OUCTP area screened in the Lower 180-Foot Aquifer. Based on groundwater monitoring data and data provided by the MCWD, these drinking water wells have nnd flame thrower training. Most of this area has been used for military housing for over 40 years. MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housTraining Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in soesidential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as aBooby Traps and squad patrol training area based on revied reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as a tank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and a. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps. MRS-62-L78 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majoritsite. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated grounof Area F. The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volroundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface. Three previous ESDs to the OU2 ROD have been completed: - Explanation of Significant Differences, Operable Unit 2, Fort O

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste name: MERCURY

Waste code: D011
Waste name: SILVER

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Corrective Action Summary:

Event date: 04/01/1986
Event: CA049PA

Event date: 04/01/1986
Event: CA029SF

Event date: 06/01/1987
Event: CA049SI

Event date: 01/01/1988
Event: Stabilization Measures Implemented, Groundwater extraction and treatment (e.g., to achieve groundwater containment, to achieve MCL).

Event date: 12/01/1988
Event: Stabilization Construction Completed

Event date: 07/23/1990
Event: RFI Imposition

Event date: 07/23/1990
Event: CMS Imposition

Event date: 12/01/1991
Event: CMS Workplan Approved

Event date: 12/01/1991
Event: RFI Workplan Approved

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

Event date: 01/17/1995
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 01/01/1996
Event: CA Responsibility Referred To A Non-RCRA Federal Authority, Corrective Action at the facility or area referred to CERCLA.

Event date: 08/08/1996
Event: RFA Completed, Assessment was an RFA.

Event date: 01/13/1997
Event: CMS Approved

Event date: 01/13/1997
Event: Date For Remedy Selection (CM Imposed)

Event date: 01/13/1997
Event: RFI Approved

Event date: 04/08/1998
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 04/08/1998
Event: CA Responsibility Referred To A Non-RCRA Federal Authority

Event date: 04/08/1998
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 04/08/1998
Event: Current Human Exposures under Control, Current human exposures are NOT under control.

Event date: 05/22/2000
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 05/22/2000
Event: Current Human Exposures under Control, Current human exposures are NOT under control.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal July 14, 1989): Fort Ord covers 46 square miles on Monterey Bay approximately 5.6 miles north of Monterey, Monterey County, California. The installation is bordered by the City of Marina and the Salinas River to the north, El Toro Creek to the east, Seaside and Del Rey Oaks to the south, and Monterey Bay to the west. Fort Ord was established in 1917 as a maneuver area and field artillery target range for units then stationed at the Presidio of Monterey. Its primary mission now is training. Industrial operations at Fort Ord include vehicle maintenance areas, a battery charging/repair facility, photographic processing laboratories, spray painting operations, a plastics shop, laundry/dry cleaning facilities, vehicle wash racks, and a small arms repair shop. Chemicals and ha ardous wastes were managed and disposed of at Fort Ord. According to tests conducted by the Army in 1986, elevated levels of contaminants were detected in off-base ground water. The contamination is emanating from the base and may be contaminating the drinking water supplies of the City of Marina; however, the exact location of the source has not yet been identified. The contaminants includecarbon tetrachloride, tetrachloroethylene, trichloroethylene, 1,1,1-trichloroethane, and trans-1,2-dichloroethylene. An estimated 38,600 people obtain drinking water from wells within 3 miles of ha ardous substances on the fort. Ground water is also used for irrigation. In addition, soil and ground water are contaminated at the Fire Drill Area, where approximately 600 gallons of petroleum products have been spilled. Fort Ord has identified at least 18 other contamination problems.Fort Ord is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part of IRP, theArmy is implementing a sampling plan to investigate ground water contamination. The Army is treating contaminated soil and ground water at nearby Frit sche Army Airfield Fire Drill Area. Status February 21, 1990): IRP activities continue.

Site Description: The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. Environmental investigations began at Fort Ord in 1984 under the Regional Water Quality Control Board (RWQCB) cleanup or abatement orders. In 1986, further investigations began at Operable Unit 2 (OU2). In 1990, Fort Ord was placed on the National Priorities List (NPL) because of Volatile Organic Compounds (VOCs) found in ground water beneath OU2. A Federal Facility Agreement (FFA) was signed in 1990 by the Army, U.S. Environmental Protection Agency, the California Environmental Protection Agency's Department of Toxic Substances Control (DSTC)

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and Regional Water Quality control Board (RWQCB). The FFA established schedules for commencing Remedial Investigations and Feasibility Studies (RI/FS). In 1991, the basewide RI/FS began and Fort Ord was placed on the Base Realignment and Closure list. The final FS for OU2 was completed on October 1, 1993, and the Record of Decision (ROD) was signed in August 1994. An Interim Action Plug-In ROD was signed in March 1994 for excavation and treatment of shallow contaminated soils. The Draft and Draft Final Versions of the Basewide RI/FS were completed in August 1994 and December 1994, respectively.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Del Rey Oaks to the south and Marina to the north. The Southern Pacific Railroad and Highway 1 pass through the western portion of former Fort Ord, separating the beachfront from the rest of the base. Laguna Seca Recreation Area and Toro Regional Park border former Fort Ord to the south and southeast, respectively, as well as several small communities such as Toro Park Estates and San Benancio.There are three main developed areas within Fort Ord: the Main Garrison, the East Garrison and Fritzsche Army Airfield (FAAF). The Main Garrison contains commercial, residential, and light industrial facilities. The East Garrison occupies 350 acres on the northeastern edge of the base and consists of military and industrial support areas, recreationalfacilities, and recreational open space. The FAAF serves as the general airfield for Fort Ord. EPA placed the site on the National Priorities List in 1990. Several areas of contamination exist on site. Generally, chemicals present in soil are the result of former routine maintenance and support activities on Fort Ord. Such activities include: maintenance of military vehicles at wash racks, tank storage of chemicals such as waste oil, the use of oil/water separators in drainage areas, and pesticide use and storage. The facility contained leaking petroleum underground storage tanks, containers of waste oil and various automotive chemicals, chemical storage areas, oil-waste separators, target ranges, and landfills. One on-site area is a 150-acre landfill that was primarily used to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Recordof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms target ranges. Over 12,000 acres are suspected of containing ordnance and explosives (OE). In particular, the 8,000 acre Multi-Range Area (MRA) is known to contain dangerous unexploded ordnance. OE investigations are complicated by technological limitations and protected habitat that covers the area and requires special management pursuant to the base Habitat Management Plan (HMP). This includes the current requirement to use prescribed burns to clear vegetation prior to OE removal. The HMP currently restricts burns to 800 acres/year, thus requiring at least 10 years to address OE in the MRA.The aquifers at the site are called the upper aquifer and the 180-foot aquifer. Approximately 40,000 people obtain drinking water from wells located within 3 miles of the site.Since opening in 1917, Fort Ord served as a training and staging facility for Army infantry troops. No permanent improvements were made until the late 1930s when administrative buildings, barracks, mess halls, tent pads, and a sewage treatment plant were constructed. The Main Garrison was constructed between 1940 and the 1960s, starting in the northwest corner of the base and expanding southeastward. The FAAF was incorporated into Fort Ord in 1961. Since 1917, portions of the Installation were used by infantry units for maneuvers, target ranges, and other purposes. Ordnance and explosives (OE) that have been fired into, fired upon, or used on the facility include artillery and mortar projectiles, rockets

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and guided missiles, rifle and hand grenades, practice land mines, pyrotechnics, bombs, and demolition materials. A wide variety of conventional OE items have been located at sites throughout the former Fort Ord, including pyrotechnics and explosives.Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented in preparation for transfer and reuse of former Fort Ord property. The Ord Military Community, located within the Main Garrison portion of former Fort Ord, will be retained by the Army. Since base closure in September 1994, lands outside the Ord Military Community have been subjected to the reuse process. Some of the property on the installation has been transferred. A large portion of the Inland Training Ranges was assigned to the Bureau of Land Management (BLM). The other major recipient of Fort Ord property has been the California State University (CSU) system. The CSU Monterey campus is located on the site of the former Fort Ord and is expected to expand in the future. Other areas on the installation have been or will be transferred to federal, state, local, and private entities through economic development conveyance, public benefit conveyance, negotiated sale, or other means.The reuse of the former Fort Ord following transfer of property increases the possibility of the public beingexposed to explosive hazards. In November 1998, the Army agreed to evaluate OE at former Fort Ord in an OE Remedial Investigation/Feasibility Study (RI/FS) consistent with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). A Federal Facility Agreement (FFA) was signed in 1990 by the Army, EPA, and the California Environmental Protection Agency's Department of Toxic Substances control (DTSC; formerly the Department of Health Services or DHS). The FFA established schedules for performing remedial investigations and feasibility studies and requires that remedial actions be completed as expeditiously as possible. In April 2000, an agreement was signed between the Army, EPA and DTSC to evaluate OE at theformer Fort Ord subject to the provisions of the Fort Ord FFA.EPA OU-01: Fritzsche Army Airfield Fire Drill AreaAn investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wassigned in September 1995. Groundwater cleanup standards were established in the ROD which must be met through the existing pump and treat system. The selected remedy is consistent with the initial action described above. The groundwater treatment system was installed in 1988. In 2004, the Army awarded a fixed price contract for the management and completion of the groundwater cleanup remedy at Operable Unit 1.EPA OU-02: Fort Ord LandfillOne on-site area is a 150-acre landfill that was primarilyused to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Record of Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed.The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. In 1994, the Army completed an investigation focusing on groundwater andsoil contamination originating from the landfill. A Record of Decision (ROD) was signed in August 1994. The ROD included capping the landfill and installing a groundwater pump and treatment system. Construction of the groundwater treatment system is complete and is operational.In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

provide more clean land for re-use. The changes are documented in the Explanation of Significant Differences (ESD) in August 1996.The consolidation is complete and capping of the main landfill was completed in December 2002. The Army has installed an active landfill gas extraction and treatment system to capture and remediate methane andother volatile organic compound gases that are being generated by decaying materials in the landfill. The Army continues to monitor landfill gases to ensure that do not pose a health hazardEPA OU-03: Overall SiteIn 1990, the Army began further investigations into the nature and extent of on- and off-site soil and groundwater contamination, as well as any ecological or health threats that may be present. The investigation identified three waste disposal sites, firing ranges, and a vehicle maintenance area that require extensive cleanup actions. The Army completed the RI/FS and ROD in 1997, and all soil cleanup actions are complete, and groundwater pump and treatment systems are operational. The action included remediating the Sites 2/12 maintenance/disposal area by soil excavation and ongoing groundwater remediation, Sites 16/17 disposal area by soil excavation, Site 31 disposal area by soil excavation, and Site 39 small arms ranges by soil excavation. Most of the excavated soils were placed at the Fort Ord Landfill, which was closed in December 2002. The Army is currently evaluating treatment/disposal options for additional Site 39 soils to be excavated.Site 39, which includes the Multi-Range Area (MRA), was reportedly used sincethe early 1900s for small arms training and ordnance training exercises, including onshore naval gunfire. Over the years, in addition to small arms rounds, various types of ordnance have been used or found in the MRA, including hand grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, petroleum hydrocarbons, and other metals associated with training activities. Ordnance is being addressed through other remedial or removal actions.Site 39 comprises approximately 8,500 acres in the southern portion of Fort Ord. Site 39 is bounded byEucalyptus Road to the north, Barloy Canyon Road to the east, Boundary Road and South Boundary Road to the south, and General Jim Moore Blvd to the west.Results of the RI indicate the metals lead and beryllium, explosive compounds, and organic compounds are present in shallow soil above background concentrations in localized areas at Site 39, and are associated with past military training activities.Spent ammunition found at the Small Arms Ranges consists of bullets, black powder rifle balls, and lead shot. Lead is the primary chemical of concern in soil at the Small Arms Ranges at Site 39. In localized areas, spent ammunition is found on the ground surface.An Explanation of Significant Differences addressing OU 3 was completed in December2003.EPA OU-04: Surface SoilsEPA OU-05: No Action SoilsEPA OU-07: Site 3 Beach RangeSite 3 is situated within about 3.2 miles (780 acres) of dunes along the coastline of Monterey Bay at the western boundary of Fort Ord. Results of the investigation indicate lead from small arms is the main contaminant at the site. The site is also home of the Smith's Blue butterfly, an endangered species, and buckwheat plants which the butterflies use to lay their eggs on. In 1997, the Army completed a ROD allowing them to first clean up the lead contamination to address human health concerns by soil excavation and placement in the Fort Ord Landfill, which was simultaneously being remediated (capped). This cleanup was completed in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well.EPA OU-08: OE Track 0 (No Further Action)The Track 0 process addresses single or grouped areas of land at the former Fort Ord that have no history of OE-related use and for which No Action is necessary to protect human health and the environment. These areas consist largely of land that has been developed for military support or residential use throughout Fort Ord's history and areas

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

that have no physical or documented evidence of OE-related training. A Track 0 Special Case area includes a former landfill where OE scrap items were found buried with refuse. No OE-related activities occurred in the area and the OE scrap items and the refuse were entirely removed.Track 0 areas were grouped geographically: e.g., all non-OE land in the Main Garrison was grouped and discussed together as one area. Track 0 includes parcels in the following areas:- Highway 1 Area- Golf Course Maintenance Area- Brostrom Park Area- Patton/Abrams Park Housing Area- Open Space, Main Entrance Area- Surplus II Area- Fritzsche Army Airfield Area- East Garrison Area- Main Garrison Area- OU 2 Landfill Area- Reservation Road AreaTrack 0 sites were addressed by a No Further Action Record of Decision (ROD) dated July 2, 2002.The Army has been conducting military munitions sampling and removal actions at identified Munitions Response Sites (MRS) and will continue these actions to mitigate imminent MEC-related hazards to the public while gathering data about the type of military munitions and level of hazard at each of the sites for use in the base-wide MR RI/FS. The Army is performing its activities pursuant to the President's authority under the CERCLA Section 104, as delegated to the Army in accordance with Executive Order 12580 and in compliance withthe process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will continue to be involved. The Army is preparing the MR RI/FS for Fort Ord to address MEC-related hazards. The MR RI/FS will review and evaluate past investigative and removal actions, as well as recommend future response actions deemed necessary to protect human health and the environment on the basis of proposed reuses specified in the Fort Ord Reuse Authority (FORA) Reuse Plan.The information to be evaluated during the MR RI/FS will include site knowledge, the quality of the available information,work completed, and intended future land uses. The base-wide MR RI/FS will contain a comprehensive evaluation of all MEC-related data for the entire former Fort Ord and will evaluate long-term response alternatives for cleanup and risk management ofMEC.The MR RI/FS is organized as a "tracking" process whereby sites with similar characteristics will be grouped to expedite cleanup, reuse, and/or transfer based on current knowledge. The Track 0 Record of Decision (ROD) addresses areas on the former Fort Ord that have been identified as requiring no munitions response to protect human health (public safety) and the environment (Track 0 areas). Other Track (1 through 3) areas will be addressed separately for the other lands that have or are suspected to have a history of military munitions-related use and investigations completed to date. Track 1 sites were suspected to have been used for training with military munitions but for which no further response action is required because they fall into one of the three categories defined in Record of Decision, No Further Action Related to Munitions and Explosives of Concern-Track 1 Sites; No Further Remedial Action with Monitoring for Ecological Risks from Chemical Contamination at Site 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are known or suspected to be present, but MEC investigations have not yet been completed.All base-wide MR RI/FS documents have been or will be prepared in cooperation with the EPA and DTSC in accordance with the Fort Ord FFA; made available for public review and comment; and placed in the Administrative Record and local information repositories.A ROD addressing OU 8 was completed in 2002. An Explanation of Significant Difference (ESD) pertaining to the OU8 ROD was completed in April of 2005.EPA OU-09: OE Track 1Track 1 sites are sites where munitions and explosives of concern were suspected but no further remedial action was deemed necessary to protect human health and the environment. The Track 1 Proposed Plan was issued for public comment on September 15, 2004 and

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the ROD is scheduled to be signed in 2005.EPA OU-10: OE at Ranges 43-48, Range 30A, and Site OE-16Ranges 43-48 cover approximately 498 acres to the south of Eucalyptus Road in the south-central portion of the former Fort Ord. The majority of the site is designated as habitat reserve and will remain undeveloped (473 acres), and a limited portion of the site (25 acres) will be developed and reused.These ranges were part of the former Fort Ord's Multi-Range Area (MRA) and are categorized as firing ranges where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Ranges 43-48 mainly consists of central maritime chaparral (CMC)with some grassland areas.Training facilities maps indicate these ranges were used for a variety of live fire exercises from the 1940s through the 1990s. Records and recent field investigations indicate the ammunition used at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitank weapon (LAW); small arms; practice anti-personnel mines; dragon guided missiles; practice claymore mines; and fragmentation hand grenades.The former firing ranges contain sensitively fuzed, highly dangerous OE present on the ground surface or at shallow depths below the ground. As described above, numerous types of OE ranging from hand grenades to 90mm recoilless rifle rounds are known or suspected to be on the site. During recent limited surface removals in 2001, thousands of OE items were recovered at Ranges 43-48.This Interim Action site is adjacent to (less than 4,000 feet from) residential neighborhoods at Ord Military Community (Fitch and Marshall Parks) and is near the City of Seaside. The Fitch and Martin Luther King Jr. Middle Schools are located less than a mile from Ranges 43-48. Existing site security measures include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In the last three years, five documented incidents of persons trespassing into the Ranges 43-48 site occurred. In 1999, there were two documented cases of children entering the fenced MRA at Ranges44 and 45, and collecting and removing 40mm practice grenades found on the ground surface. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The majority of this Interim Action site is designated as habitat reserve and will remain undeveloped. Future reuse of Transfer Parcel E21b.3 is development.Range 30A includes approximately 388 acres located in the southeastern portion of the MRA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerFort Ord MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Range 30A mainly consists of CMC with somegrassland areas.Range 30A was constructed in 1990 as a 40mm machine gun range and was in use until 1993. According to the Fort Ord Training Ranges Standard Operating Procedure (SOP), the only weapon authorized for use at Range 30A from 1991 and 1992was the MK19 40mm machine gun, Mod 3. Ammunition authorized for use at Range 30A included HE, high explosive dual purpose (HEDP) and target practice (TP).Range 30A is known to contain sensitively fuzed, highly dangerous 40mm grenades and evidence of60mm and 81mm mortars and 37mm, 75mm, 155mm, and 8-inch projectiles. Limited surface removals in 2001 in the accessible areas of Range 30A have recovered hundreds of whole or partial OE and OE scrap items.The Range 30A Interim Action site is locatedin close proximity (approximately 2,200 feet north) to the Laguna Seca residential area and Laguna Seca Golf Course, and less than a mile from the Laguna Seca Raceway.

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

South Boundary Road, located approximately 2,000 feet to the south, is open to vehicular traffic during events at Laguna Seca Raceway and is always open to the public for jogging, hiking, and biking. This range was part of the former Fort Ord's MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Existing access deterrents include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), and three other incidents of fence damage were reported within 4,000 feet of the range (near Range 29). Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.As part of the closure of the former Fort Ord, the MRA will be transferred to the BLM and most of the MRA will remain undeveloped as habitat reserve. The habitat management plan (HMP) presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.Site OE-16 includes approximately 80 acres located immediately north of the former Fort Ord MRA, between Eucalyptus and Parker Flats roads and bounded by Watkins Gate Road to the east (Plate 5). This site will become habitat reserve and will remain undeveloped. The Bureau of Land Management (BLM) land (immediately adjacent) is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence. The site is posted with signs warning of the dangers associated with unexploded ordnance. Vegetation at Site OE-16 mainly consists of CMC with some grassland areas.Site OE-16 is a World War II (WWII) era rocket range, and is identified as a "bazooka practice" area on Fort Ord Training Facilities maps dating from 1945 and 1946. Available training maps after 1946 do not identify the bazooka practice area. According to Fort Ord Range Control, this range was probably used as an antitank rocket range during and shortly after WWII. Available information indicates that Site OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site was later used for a portion of time as an anti-armor training area. Evidence from the site indicates that both practice and HEAT rounds were used.Site OE-16 contains sensitively fuzed, highly dangerous OE, such as HEAT projectiles, present on the ground surface or at shallow depths below the ground. During recent limited surface removals in 2001, hundreds of OE items, including expended and live 2.36-inch rockets (practice and HEAT), practice antitank mines, rifle grenades, hand grenade fuzes, and OE scrap were recovered.Site OE-16 is located adjacent to the MRA and land that has been transferred to the BLM. The BLM land is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence posted with signs warning of the dangers associated with unexploded ordnance. The site is in close proximity to a residential neighborhood (Fitch Park) on the former Fort Ord. In 2001, an incident of persons trespassing withinthe MRA adjacent to Site OE-16 was reported. In addition, five incidents of trespassing into the MRA adjacent to Site OE-16 occurred within the last three years. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The land that includes Site OE-16 will be transferred to the BLM and will remain undeveloped as habitat reserve. The HMP for former Fort Ord presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.An Interim Action Record of Decision addressing OE at EPA OU-10 was signed in September 2002.The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acres was burned. The Army is studying the October 2003 burn to understand both what went right and what went wrong. Ordnance has been cleared from the surface of the entire burned area and subsurface clearance is ongoing. The next prescribed burn is scheduled to take place in 2005.OU-10 Track 2 Sites:Track 2 sites are sites where munitions and explosives of concern were found and a removal action was conducted to clean it up. The first of several Track 2 RI/FS reports is due to be issued in 2005 for the area of Fort Ord known as Parker Flats.EPA OU-11: OE Track 3Track 3 sites are sites where munitions and explosives of concern are known to be present but no cleanup has been conducted yet. The final Track 3 ROD is expected to be completed by 2007, with UXO cleanup work continuing for at least 10 years thereafter.EPA OU-12: Carbon Tetrachloride PlumeThe Army has initiated a remedial investigation/feasibility study of another area of groundwater contamination, the so-called "carbon tetrachloride plume operable unit", near the City of Marina. Contaminants slightly above regulatory standards have been found in offsite groundwater. This area of contamination is not being used for drinking water. Potential source areas are also being investigated. A soil vapor sampling and extraction system pilot study was conducted in 2004 to address the vadose zone above the carbon tetrachloride plume area. The pilot study was very successful and appears to have removed significant mass from the vadose zone. The Army expects to complete the draft Remedial Investigation/Feasibility Study Report for the carbon tetrachloride plume operable unit in 2005.OU 9:A list of the 21 Track 1 sites for which No Further Action Related to MEC is required is comprised of:MRS-1-Flame Thrower Range: The site is 25 acres in size, and is located in the northwestern part of former Fort Ord. MRS-1 is currently occupied by housing. Proposed reuse plans include residential development. Based on the literature review and sampling, the site appears to have been used for camouflage training, mine and booby trap training, non-firing mortar training, and flame thrower training. Most of this area has been used for military housing for over 40 years.MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housing. The site is currently undeveloped with proposed reuse plans to include development with reserve areas or development with restrictions. Review of training maps, aerial photographs, and other Fort Ord maps indicate mine and booby trap training occurred at the site. The adjacent areas have been used as a school and military housing for over 40 years.MRS-13A-Practice Mortar Range: The site is 61 acres in size, and is located in the northern portion of the former Fort Ord. Proposed reuse plans for MRS-13A include residential development and a park. The majority of the site has contained residential housing for nearly 30 years. The area was extensively graded in the 1970s and housing was built on portions of the site. The western portion of the site was used as a landfill in the 1960s. All landfill material in the western portion of MRS-13A was excavated (removed) and transported tothe main landfill south of Immix Road in the 1990s. Several munitions debris items and three unexploded ordnance (UXO) items were identified within and adjacent to MRS-13A during landfill excavation and housing development grading activities and were removed: three live ground signals and loose pyrotechnic material; three inert hand grenade primer detonators; two inert 40mm signal cartridges; an inert fin assembly for a 3.5-inch rocket; a live rifle grenade; miscellaneous projectiles; and two inert 3.5-inch rocket motors.MRS-20-Recoilless Rifle Training Range: The site is 7 acres in size, and is located in the southwestern portion of the Main Garrison near residential housing and Highway 1. This site is currently open space with

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

proposed reuse plans, which include development. The site was identified as a potential Recoilless Rifle Training Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in some cases, could be fired by either method.MRS-22 (Site 3)-Beach Trainfire Ranges: The site is 952 acres in size, and is located on the Monterey Baycoastline along the western margin of former Fort Ord as shown on Plate 2. The site is currently open space with the proposed reuse of the site to include a State park with open space and recreational areas. Training maps, aerial photographs, and interviews indicate the site was used as the Beach Trainfire Ranges from 1940s until base closure in 1994. The ranges contained 17 small arms firing ranges; an obstacle course; a bivouac area; a rifle instruction circle; a bayonet assault course; chemical, biological, and radiological (CBR) training areas; target detection training areas; an infiltration course; and a former ammunition supply point. CBR training at MRS-22 (Site 3) only involved training troops in the identification of targets while wearing gas masks, and did not involve the use of chemical, biological or radiological materials. Training at the Beach Trainfire Ranges reportedly also included occasional practice mortar use with inert training devices, amphibious assault landings, and battle demonstrations.MRS-24B-Practice Hand Grenade Range: The site is 14.2 acres in size, and is located in the west-central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the Impact Area. MRS-24B will continue to be used for military housing. Historical and sampling information indicate the site was used as practice hand grenade range in the 1940s.MRS-24D-Booby Traps: The site is 1.8 acres in size, and is located in the west central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as a "Booby Traps" and squad patrol training area based on review of a 1946 historical map; however, the site boundary was northwest of the area shown as "Booby Traps" on 1945 and 1946 training maps.MRS-24E-Practice Rifle Grenade Range: The site is 2.7 acres in size, and is located in the west central portion of former Fort Ord. The site is also located south of the Main Garrison and just north of the former Impact Area within a military housing complex. MRS-24E will continue to be used for military housing. MRS-24E was identified as a Practice Rifle Grenade Range on 1945/1946 training maps, but no evidence of this use was discovered during sampling at the site.MRS-27X-Training Site 24: The site is 79.5 acres in size, and is undeveloped open space located in the southeastern portion of former Fort Ord. MRS-27X is currently a habitat reserve area managed by the Bureau of Land Management (BLM), and is open to the public for recreational use. Based on review of Fort Ord training maps, the site was used as a troop training and maneuver area from the 1950s to 1970s, and as an overnight bivouac area and medical training area in the 1980s.MRS-27Y-Training Site 25: The site is 25 acres in size,and is mainly undeveloped open space located in the eastern portion of former Fort Ord along Inter-Garrison Road. A small portion of the site also lies on property that was transferred to California State University Monterey Bay in 1995 for development. The site was identified as one of 26 training sites within Fort Ord Training and Maneuver Areas used as troop training, maneuver, and overnight bivouac areas.MRS-32A-Oil Well Road Training Area: The site is 38 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as atank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and as a troop training and

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

maneuver area from 1950s to 1980s.MRS-32B-Oil Well Road Training Area II: The site is 47 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32B include maintaining the land as habitat reserve. Based on historical training maps (circa 1954 and 1956), it was identified as the "Oil Well Road Training Area"; a portion of the site was reportedly used as a Tank Gunnery Range in 1950s; and the site may also have been used for firing of shoulder-launched projectiles.MRS-39-Mine and Booby Trap Area: The site is 12.1 acres in size, and is located east of General Jim Moore Boulevard and south of Gigling Road in the Marshall Park housing area. MRS-39 will continue to be used for military housing. The site was identified as a Mine and Booby Trap Training Area on 1957/1958 maps.MRS-49-Former Rifle Grenade Range: The site is 28 acres in size, and is located in the west central portion of former Fort Ord, south of Main Garrison and just north of military housing. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a training area and rifle grenade range in the 1940s and 1950s based on interviews conducted during the Preliminary Assessment/Site Inspection (PA/SI) phase of the Fort Ord Archive Search.MRS-59A-Unnamed: The site is 41 acres in size, and is located in the eastern portion of former Fort Ord near the East Garrison and MRS-5. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a possible 2.36-inch rocket range during interviews conducted during the PA/SI phase of the Fort Ord Archive Search. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps.MRS-62-Laguna Seca Open Space: The site is 247 acres in size, and is located at the southern end of former Fort Ord. The site is currently open space andproposed reuse plans include development. The site was identified as a small arms and flare training area during an interview with a former Fort Ord Fire Chief conducted during the PA/SI phase of Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, the site was used as a troop training and maneuver area from the late 1940s through 1980s; and the southern half of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-62 lies within a larger area identified during interviews conducted as part of the Archives Search as "Area T" and was a described as a general area where training may have occurred. The boundary of MRS-62 is based on transfer parcel delineation and not on evidence of munitions use. The boundary of MRS-62 was established to correspond to with disposal Parcel L20.6. Although the size of the parcel to be transferred has changed over time, the boundary of MRS-62 corresponds with the current boundary of Parcel L20.6.MRS-63-Canyon Training Area: The site is 28 acres in size, and is located at the southern end of former Fort Ord east of MRS-62. MRS-63 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as a small arms and flare training area during the PA/SI phase of the Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, most of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators.MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majority of the site lies on property transferred to California State University Monterey Bay (CSUMB) that is currently used for student housing or is proposed for development. A small portion of the site lies on property that is designated as habitat reserve. The site was identified as a reported signal corps field training area during the PA/SI phase of Fort Ord Archive Search, and other uses included aviation

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

training, basic unit training, and a bivouac area from 1950s until housing construction in 1989.MRS-69-Unnamed: The site is 37 acres in size, and is undeveloped open space located on the eastern side of former Fort Ord. MRS-69 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as an area of possible rifle grenade use based on interviews with a former Fort Ord Fire Chief. This site is within land transferred to the BLM and is open to the public for hiking, biking, and horseback riding. Use is limited to marked trails. The public has had access to this area for approximately 6 years.MRS-70-Unnamed: The site is 14 acres in size, and is located on the southeastern side of former Fort Ord, south of Oil Well Road. The site is currently a habitat reserve area managed by BLM, and is open to the public for recreational use. The area encompassing MRS-70 was identified as containing firing berms based on interviews with a former Fort Ord Fire Chief.A ROD addressing OU 9 was completed in April 2005.Operable Unit 2:The Fort Ord Landfills area was designated as Operable Unit 2 (OU2) when a remedial investigation identified the presence of volatile organic compounds (VOCs) associated with landfilled materials in groundwater beneath the site. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated groundwater and ongoing remediation of groundwater associated with OU2 is being conducted in accordance with the OU2 Record of Decision (ROD) and the Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD).In accordance with the OU2 ROD and the Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills, the Army completed removal and consolidation of refuse from the north landfill into the main landfill in October 1998 and installation of an engineered cover system for the main landfill in December 2002 as part of the closure process for the Fort Ord Landfills.At the Fort Ord Landfills, the perimeter fence line was initially designated as the boundary for landfill gas (LFG) compliance monitoring in accordance with applicable or relevant and appropriate requirements (ARARS) and LFG monitoring probes were installed inside the fence line. Monitoring of these probes commenced in June 2000. Fixed-based laboratory results and field measurements showed methane concentration exceeding the 5% regulatory standard in most probes. The Army performed an additional investigation in August 2000 and sampling results showed that methane was detectable extending out about 70 feet front the fence line on the east side of Area F. All probes were monitored again in September and December 2000, with the results again showing methane concentrations exceeding the 5% standard. In response the Army installed additional probes at locations around the outer parts of the OU2 property beyond the fence line in April and May 2001. Analytical results for these probes indicated that methane concentrations at the property boundary were less than the 5% standard, with the exception of the east side of Area F.The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volatile organic compounds (VOCs) in air between the Fort Ord Landfills and the nearest housing. These data were used to complete a screening levelhuman health risk assessment (HHRA) for nearby residences. The HHRA was updated after each monitoring event and attached as an appendix to each ambient air monitoring report. The HHRA concluded that there is a health risk for long-term exposure to VOCs in ambient air; however, the Army determined the data evaluated in the HHRA were limited and additional monitoring would be appropriate. Additional ambient air monitoring was conducted on a quarterly basis in 2003 and the HHRA updated to include these data and evaluate specifically landfill-related risk. The updated HHRA indicated the Fort Ord Landfills are not a significant contributor of VOCs

USARMY FORT ORD (Continued) **1000393341**

in ambient air or risk to downwind receptors.The following remedies for the Fort Ord Landfills were selected in the OU2 ROD:- A cover system to (1) prevent rainwater from percolating through the landfilled areas into the underlying aquifers; (2) collect and remove methane offgas (if necessary); and (3) prevent exposure of sanitary waste in the landfills to the surrounding environment.- Institutional controls (i.e., deed restrictions) to be placed on the property to ensure that the integrity of the cover system is maintained and prevent potential direct exposures of VOCs to the environment or people associated with future use of the site.- Institutional controls (i.e., deed restrictions) that prevent the use of groundwater within the contaminant plume.- Groundwater extraction and treatment, to be monitored on a regular basis and adjusted as warranted by the performance data collected during operation. Additionally, treated groundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface.Three previous ESDsto the OU2 ROD have been completed:- Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD). The OU2 ESD finalized the cleanup standard for the Upper 180-foot Aquifer to be consistent with those of the A-aquifer to facilitate the coordinated cleanup strategy for both aquifers. - Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills (Area A ESD). The Area A ESD addressed excavation and consolidation of refuse from the north landfill (Area A) into the main landfill (Areas B through F).- Explanation of Significant Differences, Consolidation of Remediation Waste in a Corrective Action Management Unit, Operable Unit 2, Fort Ord Landfills (CAMU ESD). The CAMU ESD addressed using remediation waste as foundation layer material instead of "clean" (uncontaminated) soil as described in the OU2 ROD.An additional ESD addressing OU2 was completed in October of 2006.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Delof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms tarsives. Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented informer Fort Ord subject to the provisions of the Fort Ord FFA. EPA OU-01: Fritzsche Army Airfield Fire Drill Area An investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wter treatment system is complete and is operational. In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will provide more clean land for re-use. The changes are documented in the Explanation of Signd grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, p in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well. EPA OU-08: OE Track 0 (No Further Action)the process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will contite 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are kned at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm

USARMY FORT ORD (Continued) **1000393341**

subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitanA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), an OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site wd of Decision addressing OE at EPA OU-10 was signed in September 2002. Operable Unit 10: MRS-3 Based on the MRS-3 sampling results, a MEC removal to four feet bgs was recommended per the Final Phase I Engineering Evaluation/Cost Analysis (Phase I E MEC items were removed. In addition, 293 items were removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Most of the items found at MRS-4B were consistent with the reportt MRS-13B at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from burial pits included grenade and mine fuzes, firing devices, pyrotechnics (signal, illumination and smoke), rockets, rifle and hand smoke grenades, blasting caps,items found within MRS-27G were generally of the types associated with overnight bivouac training sites and general maneuver areas. Within MRS-27G's boundaries a small number of 75 millimeter (mm) and 37mm items were removed, inspected and determinedemoval to four feet bgs. This MRS was subsequently subdivided into 240 100- X 100-foot removal grids. An investigation for MEC was conducted using the Schonstedt Model GA-52/Cx magnetometer, with all detected MEC removed. 50 MEC items were removed. Iere removed. In addition, 149 pounds of debris was removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Of the 26 MEC items recovered, 2 munitions (a MK I 75mm Shrapnel prtems were non-penetrating (e.g., pyrotechnics, grenades, and grenade and projectile fuzes) munitions. The penetrating military munitions found included projectiles, rifle grenades, and rockets. Both DMM and MD were found in numerous burial pits thatated all detected anomalies at 52 100- X 100-foot grids using a Schonstedt Model GA-52/Cx magnetometer. During this investigation, 19 MEC items were removed. In addition, 453 pounds of debris was removed, inspected and determined not to pose an exploal pits were discovered during the removal conducted at MRS-53. Both DMM and MD were found in burial pits at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from these pits included fuzes (grenade, mine, time, and projectile), sich 1998, 23 100- X 200-foot grids were identified at MRS-55. Subsequently, 19 of these grids were surveyed using a Schonstedt Model GA-52/Cx magnetometer with a maximum search lane width of 5 feet. Following the survey, anomalies were selected for in). Other sources of future land use information include public benefit conveyance, negotiated sale requests, transfer documents, and the Installation-Wide Multispecies Habitat Management Plan for Former Fort Ord, California. The Reuse Plan identifiedin ground disturbing activities (e.g., during construction/excavation). A ROD addressing Operable Unit 10 was completed in August 2008. The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acresm Action in the Record of Decision, Interim Action for Ordnance and Explosives at Ranges 43-48, Range 30.A, and Site OE-16, Former Fort Ord, California (Interim Action ROD; .Army, 2002), and the implementation of MEC remediation under the Interim Acton tetrachloride (CT) detected in three different aquifers up to 550 feet below ground surface (bgs). No records exist to indicate exactly when, how often, or how much CT may have been used, stored, or disposed of; however, by delineating

the areas od by the Marina Coast Water District (MCWD) and is pumped from wells that are located east of the OUCTP area screened in the Lower 180-Foot Aquifer. Based on groundwater monitoring data and data provided by the MCWD, these drinking water wells have nnd flame thrower training. Most of this area has been used for military housing for over 40 years. MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housTraining Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in soesidential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as aBooby Traps and squad patrol training area based on revied reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as a tank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and a. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps. MRS-62-L78 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majoritsite. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated grounof Area F. The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volroundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface. Three previous ESDs to the OU2 ROD have been completed: - Explanation of Significant Differences, Operable Unit 2, Fort O

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Summary Details:

Conditions at proposal July 14, 1989): Fort Ord covers 46 square miles on Monterey Bay approximately 5.6 miles north of Monterey, Monterey County, California. The installation is bordered by the City of Marina and the Salinas River to the north, El Toro Creek to the east, Seaside and Del Rey Oaks to the south, and Monterey Bay to the west. Fort Ord was established in 1917 as a maneuver area and field artillery target range for units then stationed at the Presidio of Monterey. Its primary mission now is training. Industrial operations at Fort Ord include vehicle maintenance areas, a battery charging/repair facility, photographic processing laboratories, spray painting operations, a plastics shop, laundry/dry cleaning facilities, vehicle wash racks, and a small arms repair shop. Chemicals and ha ardous wastes were managed and disposed of at Fort Ord. According to tests conducted by the Army in 1986, elevated levels of contaminants were detected in off-base ground water. The contamination is emanating from the base and may be contaminating the drinking water supplies of the City of Marina; however, the exact location of the source has not yet been identified. The contaminants includecarbon tetrachloride, tetrachloroethylene, trichloroethylene, 1,1,1-trichloroethane, and trans-1,2-dichloroethylene. An estimated 38,600 people obtain drinking water from wells within 3 miles of ha ardous substances on the fort. Ground water is also used for irrigation. In addition, soil and ground water are contaminated at the Fire Drill Area, where approximately 600 gallons of petroleum products have been spilled. Fort Ord has identified at least 18 other contamination problems.Fort Ord is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part of IRP, theArmy is implementing a sampling plan to investigate ground water contamination. The Army is treating contaminated soil and ground water at nearby Frit sche Army Airfield Fire Drill Area. Status February 21, 1990): IRP activities continue.

Site Description: The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. Environmental investigations began at Fort Ord in 1984 under the Regional Water Quality Control Board (RWQCB) cleanup or abatement orders. In 1986, further investigations began at Operable Unit 2 (OU2). In 1990, Fort Ord was placed on the National Priorities List (NPL) because of Volatile Organic Compounds (VOCs) found in ground water beneath OU2. A Federal Facility Agreement (FFA) was signed in 1990 by the Army, U.S. Environmental Protection Agency, the California Environmental Protection Agency's Department of Toxic Substances Control (DSTC)

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and Regional Water Quality control Board (RWQCB). The FFA established schedules for commencing Remedial Investigations and Feasibility Studies (RI/FS). In 1991, the basewide RI/FS began and Fort Ord was placed on the Base Realignment and Closure list. The final FS for OU2 was completed on October 1, 1993, and the Record of Decision (ROD) was signed in August 1994. An Interim Action Plug-In ROD was signed in March 1994 for excavation and treatment of shallow contaminated soils. The Draft and Draft Final Versions of the Basewide RI/FS were completed in August 1994 and December 1994, respectively.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Del Rey Oaks to the south and Marina to the north. The Southern Pacific Railroad and Highway 1 pass through the western portion of former Fort Ord, separating the beachfront from the rest of the base. Laguna Seca Recreation Area and Toro Regional Park border former Fort Ord to the south and southeast, respectively, as well as several small communities such as Toro Park Estates and San Benancio.There are three main developed areas within Fort Ord: the Main Garrison, the East Garrison and Fritzsche Army Airfield (FAAF). The Main Garrison contains commercial, residential, and light industrial facilities. The East Garrison occupies 350 acres on the northeastern edge of the base and consists of military and industrial support areas, recreationalfacilities, and recreational open space. The FAAF serves as the general airfield for Fort Ord. EPA placed the site on the National Priorities List in 1990. Several areas of contamination exist on site. Generally, chemicals present in soil are the result of former routine maintenance and support activities on Fort Ord. Such activities include: maintenance of military vehicles at wash racks, tank storage of chemicals such as waste oil, the use of oil/water separators in drainage areas, and pesticide use and storage. The facility contained leaking petroleum underground storage tanks, containers of waste oil and various automotive chemicals, chemical storage areas, oil-waste separators, target ranges, and landfills. One on-site area is a 150-acre landfill that was primarily used to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Recordof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms target ranges. Over 12,000 acres are suspected of containing ordnance and explosives (OE). In particular, the 8,000 acre Multi-Range Area (MRA) is known to contain dangerous unexploded ordnance. OE investigations are complicated by technological limitations and protected habitat that covers the area and requires special management pursuant to the base Habitat Management Plan (HMP). This includes the current requirement to use prescribed burns to clear vegetation prior to OE removal. The HMP currently restricts burns to 800 acres/year, thus requiring at least 10 years to address OE in the MRA.The aquifers at the site are called the upper aquifer and the 180-foot aquifer. Approximately 40,000 people obtain drinking water from wells located within 3 miles of the site.Since opening in 1917, Fort Ord served as a training and staging facility for Army infantry troops. No permanent improvements were made until the late 1930s when administrative buildings, barracks, mess halls, tent pads, and a sewage treatment plant were constructed. The Main Garrison was constructed between 1940 and the 1960s, starting in the northwest corner of the base and expanding southeastward. The FAAF was incorporated into Fort Ord in 1961. Since 1917, portions of the Installation were used by infantry units for maneuvers, target ranges, and other purposes. Ordnance and explosives (OE) that have been fired into, fired upon, or used on the facility include artillery and mortar projectiles, rockets

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and guided missiles, rifle and hand grenades, practice land mines, pyrotechnics, bombs, and demolition materials. A wide variety of conventional OE items have been located at sites throughout the former Fort Ord, including pyrotechnics and explosives.Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented in preparation for transfer and reuse of former Fort Ord property. The Ord Military Community, located within the Main Garrison portion of former Fort Ord, will be retained by the Army. Since base closure in September 1994, lands outside the Ord Military Community have been subjected to the reuse process. Some of the property on the installation has been transferred. A large portion of the Inland Training Ranges was assigned to the Bureau of Land Management (BLM). The other major recipient of Fort Ord property has been the California State University (CSU) system. The CSU Monterey campus is located on the site of the former Fort Ord and is expected to expand in the future. Other areas on the installation have been or will be transferred to federal, state, local, and private entities through economic development conveyance, public benefit conveyance, negotiated sale, or other means.The reuse of the former Fort Ord following transfer of property increases the possibility of the public beingexposed to explosive hazards. In November 1998, the Army agreed to evaluate OE at former Fort Ord in an OE Remedial Investigation/Feasibility Study (RI/FS) consistent with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). A Federal Facility Agreement (FFA) was signed in 1990 by the Army, EPA, and the California Environmental Protection Agency's Department of Toxic Substances control (DTSC; formerly the Department of Health Services or DHS). The FFA established schedules for performing remedial investigations and feasibility studies and requires that remedial actions be completed as expeditiously as possible. In April 2000, an agreement was signed between the Army, EPA and DTSC to evaluate OE at theformer Fort Ord subject to the provisions of the Fort Ord FFA.EPA OU-01: Fritzsche Army Airfield Fire Drill AreaAn investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wassigned in September 1995. Groundwater cleanup standards were established in the ROD which must be met through the existing pump and treat system. The selected remedy is consistent with the initial action described above. The groundwater treatment system was installed in 1988. In 2004, the Army awarded a fixed price contract for the management and completion of the groundwater cleanup remedy at Operable Unit 1.EPA OU-02: Fort Ord LandfillOne on-site area is a 150-acre landfill that was primarilyused to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Record of Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed.The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. In 1994, the Army completed an investigation focusing on groundwater andsoil contamination originating from the landfill. A Record of Decision (ROD) was signed in August 1994. The ROD included capping the landfill and installing a groundwater pump and treatment system. Construction of the groundwater treatment system is complete and is operational.In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

provide more clean land for re-use. The changes are documented in the Explanation of Significant Differences (ESD) in August 1996.The consolidation is complete and capping of the main landfill was completed in December 2002. The Army has installed an active landfill gas extraction and treatment system to capture and remediate methane andother volatile organic compound gases that are being generated by decaying materials in the landfill. The Army continues to monitor landfill gases to ensure that do not pose a health hazardEPA OU-03: Overall SiteIn 1990, the Army began further investigations into the nature and extent of on- and off-site soil and groundwater contamination, as well as any ecological or health threats that may be present. The investigation identified three waste disposal sites, firing ranges, and a vehicle maintenance area that require extensive cleanup actions. The Army completed the RI/FS and ROD in 1997, and all soil cleanup actions are complete, and groundwater pump and treatment systems are operational. The action included remediating the Sites 2/12 maintenance/disposal area by soil excavation and ongoing groundwater remediation, Sites 16/17 disposal area by soil excavation, Site 31 disposal area by soil excavation, and Site 39 small arms ranges by soil excavation. Most of the excavated soils were placed at the Fort Ord Landfill, which was closed in December 2002. The Army is currently evaluating treatment/disposal options for additional Site 39 soils to be excavated.Site 39, which includes the Multi-Range Area (MRA), was reportedly used sincethe early 1900s for small arms training and ordnance training exercises, including onshore naval gunfire. Over the years, in addition to small arms rounds, various types of ordnance have been used or found in the MRA, including hand grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, petroleum hydrocarbons, and other metals associated with training activities. Ordnance is being addressed through other remedial or removal actions.Site 39 comprises approximately 8,500 acres in the southern portion of Fort Ord. Site 39 is bounded byEucalyptus Road to the north, Barloy Canyon Road to the east, Boundary Road and South Boundary Road to the south, and General Jim Moore Blvd to the west.Results of the RI indicate the metals lead and beryllium, explosive compounds, and organic compounds are present in shallow soil above background concentrations in localized areas at Site 39, and are associated with past military training activities.Spent ammunition found at the Small Arms Ranges consists of bullets, black powder rifle balls, and lead shot. Lead is the primary chemical of concern in soil at the Small Arms Ranges at Site 39. In localized areas, spent ammunition is found on the ground surface.An Explanation of Significant Differences addressing OU 3 was completed in December2003.EPA OU-04: Surface SoilsEPA OU-05: No Action SoilsEPA OU-07: Site 3 Beach RangeSite 3 is situated within about 3.2 miles (780 acres) of dunes along the coastline of Monterey Bay at the western boundary of Fort Ord. Results of the investigation indicate lead from small arms is the main contaminant at the site. The site is also home of the Smith's Blue butterfly, an endangered species, and buckwheat plants which the butterflies use to lay their eggs on. In 1997, the Army completed a ROD allowing them to first clean up the lead contamination to address human health concerns by soil excavation and placement in the Fort Ord Landfill, which was simultaneously being remediated (capped). This cleanup was completed in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well.EPA OU-08: OE Track 0 (No Further Action)The Track 0 process addresses single or grouped areas of land at the former Fort Ord that have no history of OE-related use and for which No Action is necessary to protect human health and the environment. These areas consist largely of land that has been developed for military support or residential use throughout Fort Ord's history and areas

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

that have no physical or documented evidence of OE-related training. A Track 0 Special Case area includes a former landfill where OE scrap items were found buried with refuse. No OE-related activities occurred in the area and the OE scrap items and the refuse were entirely removed.Track 0 areas were grouped geographically: e.g., all non-OE land in the Main Garrison was grouped and discussed together as one area. Track 0 includes parcels in the following areas:- Highway 1 Area- Golf Course Maintenance Area- Brostrom Park Area- Patton/Abrams Park Housing Area- Open Space, Main Entrance Area- Surplus II Area- Fritzsche Army Airfield Area- East Garrison Area- Main Garrison Area- OU 2 Landfill Area- Reservation Road AreaTrack 0 sites were addressed by a No Further Action Record of Decision (ROD) dated July 2, 2002.The Army has been conducting military munitions sampling and removal actions at identified Munitions Response Sites (MRS) and will continue these actions to mitigate imminent MEC-related hazards to the public while gathering data about the type of military munitions and level of hazard at each of the sites for use in the base-wide MR RI/FS. The Army is performing its activities pursuant to the President's authority under the CERCLA Section 104, as delegated to the Army in accordance with Executive Order 12580 and in compliance withthe process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will continue to be involved. The Army is preparing the MR RI/FS for Fort Ord to address MEC-related hazards. The MR RI/FS will review and evaluate past investigative and removal actions, as well as recommend future response actions deemed necessary to protect human health and the environment on the basis of proposed reuses specified in the Fort Ord Reuse Authority (FORA) Reuse Plan.The information to be evaluated during the MR RI/FS will include site knowledge, the quality of the available information,work completed, and intended future land uses. The base-wide MR RI/FS will contain a comprehensive evaluation of all MEC-related data for the entire former Fort Ord and will evaluate long-term response alternatives for cleanup and risk management ofMEC.The MR RI/FS is organized as a "tracking" process whereby sites with similar characteristics will be grouped to expedite cleanup, reuse, and/or transfer based on current knowledge. The Track 0 Record of Decision (ROD) addresses areas on the former Fort Ord that have been identified as requiring no munitions response to protect human health (public safety) and the environment (Track 0 areas). Other Track (1 through 3) areas will be addressed separately for the other lands that have or are suspected to have a history of military munitions-related use and investigations completed to date. Track 1 sites were suspected to have been used for training with military munitions but for which no further response action is required because they fall into one of the three categories defined in Record of Decision, No Further Action Related to Munitions and Explosives of Concern-Track 1 Sites; No Further Remedial Action with Monitoring for Ecological Risks from Chemical Contamination at Site 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are known or suspected to be present, but MEC investigations have not yet been completed.All base-wide MR RI/FS documents have been or will be prepared in cooperation with the EPA and DTSC in accordance with the Fort Ord FFA; made available for public review and comment; and placed in the Administrative Record and local information repositories.A ROD addressing OU 8 was completed in 2002. An Explanation of Significant Difference (ESD) pertaining to the OU8 ROD was completed in April of 2005.EPA OU-09: OE Track 1Track 1 sites are sites where munitions and explosives of concern were suspected but no further remedial action was deemed necessary to protect human health and the environment. The Track 1 Proposed Plan was issued for public comment on September 15, 2004 and

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the ROD is scheduled to be signed in 2005.EPA OU-10: OE at Ranges 43-48, Range 30A, and Site OE-16Ranges 43-48 cover approximately 498 acres to the south of Eucalyptus Road in the south-central portion of the former Fort Ord. The majority of the site is designated as habitat reserve and will remain undeveloped (473 acres), and a limited portion of the site (25 acres) will be developed and reused.These ranges were part of the former Fort Ord's Multi-Range Area (MRA) and are categorized as firing ranges where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Ranges 43-48 mainly consists of central maritime chaparral (CMC)with some grassland areas.Training facilities maps indicate these ranges were used for a variety of live fire exercises from the 1940s through the 1990s. Records and recent field investigations indicate the ammunition used at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitank weapon (LAW); small arms; practice anti-personnel mines; dragon guided missiles; practice claymore mines; and fragmentation hand grenades.The former firing ranges contain sensitively fuzed, highly dangerous OE present on the ground surface or at shallow depths below the ground. As described above, numerous types of OE ranging from hand grenades to 90mm recoilless rifle rounds are known or suspected to be on the site. During recent limited surface removals in 2001, thousands of OE items were recovered at Ranges 43-48.This Interim Action site is adjacent to (less than 4,000 feet from) residential neighborhoods at Ord Military Community (Fitch and Marshall Parks) and is near the City of Seaside. The Fitch and Martin Luther King Jr. Middle Schools are located less than a mile from Ranges 43-48. Existing site security measures include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In the last three years, five documented incidents of persons trespassing into the Ranges 43-48 site occurred. In 1999, there were two documented cases of children entering the fenced MRA at Ranges44 and 45, and collecting and removing 40mm practice grenades found on the ground surface. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The majority of this Interim Action site is designated as habitat reserve and will remain undeveloped. Future reuse of Transfer Parcel E21b.3 is development.Range 30A includes approximately 388 acres located in the southeastern portion of the MRA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerFort Ord MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Range 30A mainly consists of CMC with somegrassland areas.Range 30A was constructed in 1990 as a 40mm machine gun range and was in use until 1993. According to the Fort Ord Training Ranges Standard Operating Procedure (SOP), the only weapon authorized for use at Range 30A from 1991 and 1992was the MK19 40mm machine gun, Mod 3. Ammunition authorized for use at Range 30A included HE, high explosive dual purpose (HEDP) and target practice (TP).Range 30A is known to contain sensitively fuzed, highly dangerous 40mm grenades and evidence of60mm and 81mm mortars and 37mm, 75mm, 155mm, and 8-inch projectiles. Limited surface removals in 2001 in the accessible areas of Range 30A have recovered hundreds of whole or partial OE and OE scrap items.The Range 30A Interim Action site is locatedin close proximity (approximately 2,200 feet north) to the Laguna Seca residential area and Laguna Seca Golf Course, and less than a mile from the Laguna Seca Raceway.

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

South Boundary Road, located approximately 2,000 feet to the south, is open to vehicular traffic during events at Laguna Seca Raceway and is always open to the public for jogging, hiking, and biking. This range was part of the former Fort Ord's MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Existing access deterrents include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), and three other incidents of fence damage were reported within 4,000 feet of the range (near Range 29). Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.As part of the closure of the former Fort Ord, the MRA will be transferred to the BLM and most of the MRA will remain undeveloped as habitat reserve. The habitat management plan (HMP) presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.Site OE-16 includes approximately 80 acres located immediately north of the former Fort Ord MRA, between Eucalyptus and Parker Flats roads and bounded by Watkins Gate Road to the east (Plate 5). This site will become habitat reserve and will remain undeveloped. The Bureau of Land Management (BLM) land (immediately adjacent) is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence. The site is posted with signs warning of the dangers associated with unexploded ordnance. Vegetation at Site OE-16 mainly consists of CMC with some grassland areas.Site OE-16 is a World War II (WWII) era rocket range, and is identified as a "bazooka practice" area on Fort Ord Training Facilities maps dating from 1945 and 1946. Available training maps after 1946 do not identify the bazooka practice area. According to Fort Ord Range Control, this range was probably used as an antitank rocket range during and shortly after WWII. Available information indicates that Site OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site was later used for a portion of time as an anti-armor training area. Evidence from the site indicates that both practice and HEAT rounds were used.Site OE-16 contains sensitively fuzed, highly dangerous OE, such as HEAT projectiles, present on the ground surface or at shallow depths below the ground. During recent limited surface removals in 2001, hundreds of OE items, including expended and live 2.36-inch rockets (practice and HEAT), practice antitank mines, rifle grenades, hand grenade fuzes, and OE scrap were recovered.Site OE-16 is located adjacent to the MRA and land that has been transferred to the BLM. The BLM land is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence posted with signs warning of the dangers associated with unexploded ordnance. The site is in close proximity to a residential neighborhood (Fitch Park) on the former Fort Ord. In 2001, an incident of persons trespassing withinthe MRA adjacent to Site OE-16 was reported. In addition, five incidents of trespassing into the MRA adjacent to Site OE-16 occurred within the last three years. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The land that includes Site OE-16 will be transferred to the BLM and will remain undeveloped as habitat reserve. The HMP for former Fort Ord presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.An Interim Action Record of Decision addressing OE at EPA OU-10 was signed in September 2002.The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acres was burned. The Army is studying the October 2003 burn to understand both what went right and what went wrong. Ordnance has been cleared from the surface of the entire burned area and subsurface clearance is ongoing. The next prescribed burn is scheduled to take place in 2005.OU-10 Track 2 Sites:Track 2 sites are sites where munitions and explosives of concern were found and a removal action was conducted to clean it up. The first of several Track 2 RI/FS reports is due to be issued in 2005 for the area of Fort Ord known as Parker Flats.EPA OU-11: OE Track 3Track 3 sites are sites where munitions and explosives of concern are known to be present but no cleanup has been conducted yet. The final Track 3 ROD is expected to be completed by 2007, with UXO cleanup work continuing for at least 10 years thereafter.EPA OU-12: Carbon Tetrachloride PlumeThe Army has initiated a remedial investigation/feasibility study of another area of groundwater contamination, the so-called "carbon tetrachloride plume operable unit", near the City of Marina. Contaminants slightly above regulatory standards have been found in offsite groundwater. This area of contamination is not being used for drinking water. Potential source areas are also being investigated. A soil vapor sampling and extraction system pilot study was conducted in 2004 to address the vadose zone above the carbon tetrachloride plume area. The pilot study was very successful and appears to have removed significant mass from the vadose zone. The Army expects to complete the draft Remedial Investigation/Feasibility Study Report for the carbon tetrachloride plume operable unit in 2005.OU 9:A list of the 21 Track 1 sites for which No Further Action Related to MEC is required is comprised of:MRS-1-Flame Thrower Range: The site is 25 acres in size, and is located in the northwestern part of former Fort Ord. MRS-1 is currently occupied by housing. Proposed reuse plans include residential development. Based on the literature review and sampling, the site appears to have been used for camouflage training, mine and booby trap training, non-firing mortar training, and flame thrower training. Most of this area has been used for military housing for over 40 years.MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housing. The site is currently undeveloped with proposed reuse plans to include development with reserve areas or development with restrictions. Review of training maps, aerial photographs, and other Fort Ord maps indicate mine and booby trap training occurred at the site. The adjacent areas have been used as a school and military housing for over 40 years.MRS-13A-Practice Mortar Range: The site is 61 acres in size, and is located in the northern portion of the former Fort Ord. Proposed reuse plans for MRS-13A include residential development and a park. The majority of the site has contained residential housing for nearly 30 years. The area was extensively graded in the 1970s and housing was built on portions of the site. The western portion of the site was used as a landfill in the 1960s. All landfill material in the western portion of MRS-13A was excavated (removed) and transported tothe main landfill south of Immix Road in the 1990s. Several munitions debris items and three unexploded ordnance (UXO) items were identified within and adjacent to MRS-13A during landfill excavation and housing development grading activities and were removed: three live ground signals and loose pyrotechnic material; three inert hand grenade primer detonators; two inert 40mm signal cartridges; an inert fin assembly for a 3.5-inch rocket; a live rifle grenade; miscellaneous projectiles; and two inert 3.5-inch rocket motors.MRS-20-Recoilless Rifle Training Range: The site is 7 acres in size, and is located in the southwestern portion of the Main Garrison near residential housing and Highway 1. This site is currently open space with

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

proposed reuse plans, which include development. The site was identified as a potential Recoilless Rifle Training Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in some cases, could be fired by either method.MRS-22 (Site 3)-Beach Trainfire Ranges: The site is 952 acres in size, and is located on the Monterey Baycoastline along the western margin of former Fort Ord as shown on Plate 2. The site is currently open space with the proposed reuse of the site to include a State park with open space and recreational areas. Training maps, aerial photographs, and interviews indicate the site was used as the Beach Trainfire Ranges from 1940s until base closure in 1994. The ranges contained 17 small arms firing ranges; an obstacle course; a bivouac area; a rifle instruction circle; a bayonet assault course; chemical, biological, and radiological (CBR) training areas; target detection training areas; an infiltration course; and a former ammunition supply point. CBR training at MRS-22 (Site 3) only involved training troops in the identification of targets while wearing gas masks, and did not involve the use of chemical, biological or radiological materials. Training at the Beach Trainfire Ranges reportedly also included occasional practice mortar use with inert training devices, amphibious assault landings, and battle demonstrations.MRS-24B-Practice Hand Grenade Range: The site is 14.2 acres in size, and is located in the west-central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the Impact Area. MRS-24B will continue to be used for military housing. Historical and sampling information indicate the site was used as practice hand grenade range in the 1940s.MRS-24D-Booby Traps: The site is 1.8 acres in size, and is located in the west central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as a "Booby Traps" and squad patrol training area based on review of a 1946 historical map; however, the site boundary was northwest of the area shown as "Booby Traps" on 1945 and 1946 training maps.MRS-24E-Practice Rifle Grenade Range: The site is 2.7 acres in size, and is located in the west central portion of former Fort Ord. The site is also located south of the Main Garrison and just north of the former Impact Area within a military housing complex. MRS-24E will continue to be used for military housing. MRS-24E was identified as a Practice Rifle Grenade Range on 1945/1946 training maps, but no evidence of this use was discovered during sampling at the site.MRS-27X-Training Site 24: The site is 79.5 acres in size, and is undeveloped open space located in the southeastern portion of former Fort Ord. MRS-27X is currently a habitat reserve area managed by the Bureau of Land Management (BLM), and is open to the public for recreational use. Based on review of Fort Ord training maps, the site was used as a troop training and maneuver area from the 1950s to 1970s, and as an overnight bivouac area and medical training area in the 1980s.MRS-27Y-Training Site 25: The site is 25 acres in size,and is mainly undeveloped open space located in the eastern portion of former Fort Ord along Inter-Garrison Road. A small portion of the site also lies on property that was transferred to California State University Monterey Bay in 1995 for development. The site was identified as one of 26 training sites within Fort Ord Training and Maneuver Areas used as troop training, maneuver, and overnight bivouac areas.MRS-32A-Oil Well Road Training Area: The site is 38 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as atank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and as a troop training and

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

maneuver area from 1950s to 1980s.MRS-32B-Oil Well Road Training Area II: The site is 47 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32B include maintaining the land as habitat reserve. Based on historical training maps (circa 1954 and 1956), it was identified as the "Oil Well Road Training Area"; a portion of the site was reportedly used as a Tank Gunnery Range in 1950s; and the site may also have been used for firing of shoulder-launched projectiles.MRS-39-Mine and Booby Trap Area: The site is 12.1 acres in size, and is located east of General Jim Moore Boulevard and south of Gigling Road in the Marshall Park housing area. MRS-39 will continue to be used for military housing. The site was identified as a Mine and Booby Trap Training Area on 1957/1958 maps.MRS-49-Former Rifle Grenade Range: The site is 28 acres in size, and is located in the west central portion of former Fort Ord, south of Main Garrison and just north of military housing. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a training area and rifle grenade range in the 1940s and 1950s based on interviews conducted during the Preliminary Assessment/Site Inspection (PA/SI) phase of the Fort Ord Archive Search.MRS-59A-Unnamed: The site is 41 acres in size, and is located in the eastern portion of former Fort Ord near the East Garrison and MRS-5. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a possible 2.36-inch rocket range during interviews conducted during the PA/SI phase of the Fort Ord Archive Search. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps.MRS-62-Laguna Seca Open Space: The site is 247 acres in size, and is located at the southern end of former Fort Ord. The site is currently open space andproposed reuse plans include development. The site was identified as a small arms and flare training area during an interview with a former Fort Ord Fire Chief conducted during the PA/SI phase of Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, the site was used as a troop training and maneuver area from the late 1940s through 1980s; and the southern half of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-62 lies within a larger area identified during interviews conducted as part of the Archives Search as "Area T" and was a described as a general area where training may have occurred. The boundary of MRS-62 is based on transfer parcel delineation and not on evidence of munitions use. The boundary of MRS-62 was established to correspond to with disposal Parcel L20.6. Although the size of the parcel to be transferred has changed over time, the boundary of MRS-62 corresponds with the current boundary of Parcel L20.6.MRS-63-Canyon Training Area: The site is 28 acres in size, and is located at the southern end of former Fort Ord east of MRS-62. MRS-63 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as a small arms and flare training area during the PA/SI phase of the Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, most of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators.MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majority of the site lies on property transferred to California State University Monterey Bay (CSUMB) that is currently used for student housing or is proposed for development. A small portion of the site lies on property that is designated as habitat reserve. The site was identified as a reported signal corps field training area during the PA/SI phase of Fort Ord Archive Search, and other uses included aviation

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

training, basic unit training, and a bivouac area from 1950s until housing construction in 1989.MRS-69-Unnamed: The site is 37 acres in size, and is undeveloped open space located on the eastern side of former Fort Ord. MRS-69 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as an area of possible rifle grenade use based on interviews with a former Fort Ord Fire Chief. This site is within land transferred to the BLM and is open to the public for hiking, biking, and horseback riding. Use is limited to marked trails. The public has had access to this area for approximately 6 years.MRS-70-Unnamed: The site is 14 acres in size, and is located on the southeastern side of former Fort Ord, south of Oil Well Road. The site is currently a habitat reserve area managed by BLM, and is open to the public for recreational use. The area encompassing MRS-70 was identified as containing firing berms based on interviews with a former Fort Ord Fire Chief.A ROD addressing OU 9 was completed in April 2005.Operable Unit 2:The Fort Ord Landfills area was designated as Operable Unit 2 (OU2) when a remedial investigation identified the presence of volatile organic compounds (VOCs) associated with landfilled materials in groundwater beneath the site. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated groundwater and ongoing remediation of groundwater associated with OU2 is being conducted in accordance with the OU2 Record of Decision (ROD) and the Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD).In accordance with the OU2 ROD and the Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills, the Army completed removal and consolidation of refuse from the north landfill into the main landfill in October 1998 and installation of an engineered cover system for the main landfill in December 2002 as part of the closure process for the Fort Ord Landfills.At the Fort Ord Landfills, the perimeter fence line was initially designated as the boundary for landfill gas (LFG) compliance monitoring in accordance with applicable or relevant and appropriate requirements (ARARS) and LFG monitoring probes were installed inside the fence line. Monitoring of these probes commenced in June 2000. Fixed-based laboratory results and field measurements showed methane concentration exceeding the 5% regulatory standard in most probes. The Army performed an additional investigation in August 2000 and sampling results showed that methane was detectable extending out about 70 feet front the fence line on the east side of Area F. All probes were monitored again in September and December 2000, with the results again showing methane concentrations exceeding the 5% standard. In response the Army installed additional probes at locations around the outer parts of the OU2 property beyond the fence line in April and May 2001. Analytical results for these probes indicated that methane concentrations at the property boundary were less than the 5% standard, with the exception of the east side of Area F.The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volatile organic compounds (VOCs) in air between the Fort Ord Landfills and the nearest housing. These data were used to complete a screening levelhuman health risk assessment (HHRA) for nearby residences. The HHRA was updated after each monitoring event and attached as an appendix to each ambient air monitoring report. The HHRA concluded that there is a health risk for long-term exposure to VOCs in ambient air; however, the Army determined the data evaluated in the HHRA were limited and additional monitoring would be appropriate. Additional ambient air monitoring was conducted on a quarterly basis in 2003 and the HHRA updated to include these data and evaluate specifically landfill-related risk. The updated HHRA indicated the Fort Ord Landfills are not a significant contributor of VOCs

USARMY FORT ORD (Continued) **1000393341**

in ambient air or risk to downwind receptors.The following remedies for the Fort Ord Landfills were selected in the OU2 ROD:- A cover system to (1) prevent rainwater from percolating through the landfilled areas into the underlying aquifers; (2) collect and remove methane offgas (if necessary); and (3) prevent exposure of sanitary waste in the landfills to the surrounding environment.- Institutional controls (i.e., deed restrictions) to be placed on the property to ensure that the integrity of the cover system is maintained and prevent potential direct exposures of VOCs to the environment or people associated with future use of the site.- Institutional controls (i.e., deed restrictions) that prevent the use of groundwater within the contaminant plume.- Groundwater extraction and treatment, to be monitored on a regular basis and adjusted as warranted by the performance data collected during operation. Additionally, treated groundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface.Three previous ESDsto the OU2 ROD have been completed:- Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD). The OU2 ESD finalized the cleanup standard for the Upper 180-foot Aquifer to be consistent with those of the A-aquifer to facilitate the coordinated cleanup strategy for both aquifers. - Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills (Area A ESD). The Area A ESD addressed excavation and consolidation of refuse from the north landfill (Area A) into the main landfill (Areas B through F).- Explanation of Significant Differences, Consolidation of Remediation Waste in a Corrective Action Management Unit, Operable Unit 2, Fort Ord Landfills (CAMU ESD). The CAMU ESD addressed using remediation waste as foundation layer material instead of "clean" (uncontaminated) soil as described in the OU2 ROD.An additional ESD addressing OU2 was completed in October of 2006.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Delof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms tarsives. Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented informer Fort Ord subject to the provisions of the Fort Ord FFA. EPA OU-01: Fritzsche Army Airfield Fire Drill Area An investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wter treatment system is complete and is operational. In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will provide more clean land for re-use. The changes are documented in the Explanation of Signd grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, p in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well. EPA OU-08: OE Track 0 (No Further Action)the process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will contite 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are kned at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm

subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitanA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), an OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site wd of Decision addressing OE at EPA OU-10 was signed in September 2002. Operable Unit 10: MRS-3 Based on the MRS-3 sampling results, a MEC removal to four feet bgs was recommended per the Final Phase I Engineering Evaluation/Cost Analysis (Phase I E MEC items were removed. In addition, 293 items were removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Most of the items found at MRS-4B were consistent with the reportt MRS-13B at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from burial pits included grenade and mine fuzes, firing devices, pyrotechnics (signal, illumination and smoke), rockets, rifle and hand smoke grenades, blasting caps,items found within MRS-27G were generally of the types associated with overnight bivouac training sites and general maneuver areas. Within MRS-27G's boundaries a small number of 75 millimeter (mm) and 37mm items were removed, inspected and determinedemoval to four feet bgs. This MRS was subsequently subdivided into 240 100- X 100-foot removal grids. An investigation for MEC was conducted using the Schonstedt Model GA-52/Cx magnetometer, with all detected MEC removed. 50 MEC items were removed. Iere removed. In addition, 149 pounds of debris was removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Of the 26 MEC items recovered, 2 munitions (a MK I 75mm Shrapnel prtems were non-penetrating (e.g., pyrotechnics, grenades, and grenade and projectile fuzes) munitions. The penetrating military munitions found included projectiles, rifle grenades, and rockets. Both DMM and MD were found in numerous burial pits thatated all detected anomalies at 52 100- X 100-foot grids using a Schonstedt Model GA-52/Cx magnetometer. During this investigation, 19 MEC items were removed. In addition, 453 pounds of debris was removed, inspected and determined not to pose an exploal pits were discovered during the removal conducted at MRS-53. Both DMM and MD were found in burial pits at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from these pits included fuzes (grenade, mine, time, and projectile), sich 1998, 23 100- X 200-foot grids were identified at MRS-55. Subsequently, 19 of these grids were surveyed using a Schonstedt Model GA-52/Cx magnetometer with a maximum search lane width of 5 feet. Following the survey, anomalies were selected for in). Other sources of future land use information include public benefit conveyance, negotiated sale requests, transfer documents, and the Installation-Wide Multispecies Habitat Management Plan for Former Fort Ord, California. The Reuse Plan identifiedin ground disturbing activities (e.g., during construction/excavation). A ROD addressing Operable Unit 10 was completed in August 2008. The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acresm Action in the Record of Decision, Interim Action for Ordnance and Explosives at Ranges 43-48, Range 30.A, and Site OE-16, Former Fort Ord, California (Interim Action ROD; .Army, 2002), and the implementation of MEC remediation under the Interim Acton tetrachloride (CT) detected in three different aquifers up to 550 feet below ground surface (bgs). No records exist to indicate exactly when, how often, or how much CT may have been used, stored, or disposed of; however, by delineating

the areas od by the Marina Coast Water District (MCWD) and is pumped from wells that are located east of the OUCTP area screened in the Lower 180-Foot Aquifer. Based on groundwater monitoring data and data provided by the MCWD, these drinking water wells have nnd flame thrower training. Most of this area has been used for military housing for over 40 years. MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housTraining Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in soesidential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as aBooby Traps and squad patrol training area based on revied reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as a tank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and a. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps. MRS-62-L78 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majoritsite. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated grounof Area F. The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volroundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface. Three previous ESDs to the OU2 ROD have been completed: - Explanation of Significant Differences, Operable Unit 2, Fort O

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Summary Details:

Conditions at proposal July 14, 1989): Fort Ord covers 46 square miles on Monterey Bay approximately 5.6 miles north of Monterey, Monterey County, California. The installation is bordered by the City of Marina and the Salinas River to the north, El Toro Creek to the east, Seaside and Del Rey Oaks to the south, and Monterey Bay to the west. Fort Ord was established in 1917 as a maneuver area and field artillery target range for units then stationed at the Presidio of Monterey. Its primary mission now is training. Industrial operations at Fort Ord include vehicle maintenance areas, a battery charging/repair facility, photographic processing laboratories, spray painting operations, a plastics shop, laundry/dry cleaning facilities, vehicle wash racks, and a small arms repair shop. Chemicals and ha ardous wastes were managed and disposed of at Fort Ord. According to tests conducted by the Army in 1986, elevated levels of contaminants were detected in off-base ground water. The contamination is emanating from the base and may be contaminating the drinking water supplies of the City of Marina; however, the exact location of the source has not yet been identified. The contaminants includecarbon tetrachloride, tetrachloroethylene, trichloroethylene, 1,1,1-trichloroethane, and trans-1,2-dichloroethylene. An estimated 38,600 people obtain drinking water from wells within 3 miles of ha ardous substances on the fort. Ground water is also used for irrigation. In addition, soil and ground water are contaminated at the Fire Drill Area, where approximately 600 gallons of petroleum products have been spilled. Fort Ord has identified at least 18 other contamination problems.Fort Ord is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part of IRP, theArmy is implementing a sampling plan to investigate ground water contamination. The Army is treating contaminated soil and ground water at nearby Frit sche Army Airfield Fire Drill Area. Status February 21, 1990): IRP activities continue.

Site Description: The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. Environmental investigations began at Fort Ord in 1984 under the Regional Water Quality Control Board (RWQCB) cleanup or abatement orders. In 1986, further investigations began at Operable Unit 2 (OU2). In 1990, Fort Ord was placed on the National Priorities List (NPL) because of Volatile Organic Compounds (VOCs) found in ground water beneath OU2. A Federal Facility Agreement (FFA) was signed in 1990 by the Army, U.S. Environmental Protection Agency, the California Environmental Protection Agency's Department of Toxic Substances Control (DSTC)

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and Regional Water Quality control Board (RWQCB). The FFA established schedules for commencing Remedial Investigations and Feasibility Studies (RI/FS). In 1991, the basewide RI/FS began and Fort Ord was placed on the Base Realignment and Closure list. The final FS for OU2 was completed on October 1, 1993, and the Record of Decision (ROD) was signed in August 1994. An Interim Action Plug-In ROD was signed in March 1994 for excavation and treatment of shallow contaminated soils. The Draft and Draft Final Versions of the Basewide RI/FS were completed in August 1994 and December 1994, respectively.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Del Rey Oaks to the south and Marina to the north. The Southern Pacific Railroad and Highway 1 pass through the western portion of former Fort Ord, separating the beachfront from the rest of the base. Laguna Seca Recreation Area and Toro Regional Park border former Fort Ord to the south and southeast, respectively, as well as several small communities such as Toro Park Estates and San Benancio.There are three main developed areas within Fort Ord: the Main Garrison, the East Garrison and Fritzsche Army Airfield (FAAF). The Main Garrison contains commercial, residential, and light industrial facilities. The East Garrison occupies 350 acres on the northeastern edge of the base and consists of military and industrial support areas, recreationalfacilities, and recreational open space. The FAAF serves as the general airfield for Fort Ord. EPA placed the site on the National Priorities List in 1990. Several areas of contamination exist on site. Generally, chemicals present in soil are the result of former routine maintenance and support activities on Fort Ord. Such activities include: maintenance of military vehicles at wash racks, tank storage of chemicals such as waste oil, the use of oil/water separators in drainage areas, and pesticide use and storage. The facility contained leaking petroleum underground storage tanks, containers of waste oil and various automotive chemicals, chemical storage areas, oil-waste separators, target ranges, and landfills. One on-site area is a 150-acre landfill that was primarily used to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Recordof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms target ranges. Over 12,000 acres are suspected of containing ordnance and explosives (OE). In particular, the 8,000 acre Multi-Range Area (MRA) is known to contain dangerous unexploded ordnance. OE investigations are complicated by technological limitations and protected habitat that covers the area and requires special management pursuant to the base Habitat Management Plan (HMP). This includes the current requirement to use prescribed burns to clear vegetation prior to OE removal. The HMP currently restricts burns to 800 acres/year, thus requiring at least 10 years to address OE in the MRA.The aquifers at the site are called the upper aquifer and the 180-foot aquifer. Approximately 40,000 people obtain drinking water from wells located within 3 miles of the site.Since opening in 1917, Fort Ord served as a training and staging facility for Army infantry troops. No permanent improvements were made until the late 1930s when administrative buildings, barracks, mess halls, tent pads, and a sewage treatment plant were constructed. The Main Garrison was constructed between 1940 and the 1960s, starting in the northwest corner of the base and expanding southeastward. The FAAF was incorporated into Fort Ord in 1961. Since 1917, portions of the Installation were used by infantry units for maneuvers, target ranges, and other purposes. Ordnance and explosives (OE) that have been fired into, fired upon, or used on the facility include artillery and mortar projectiles, rockets

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and guided missiles, rifle and hand grenades, practice land mines, pyrotechnics, bombs, and demolition materials. A wide variety of conventional OE items have been located at sites throughout the former Fort Ord, including pyrotechnics and explosives.Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented in preparation for transfer and reuse of former Fort Ord property. The Ord Military Community, located within the Main Garrison portion of former Fort Ord, will be retained by the Army. Since base closure in September 1994, lands outside the Ord Military Community have been subjected to the reuse process. Some of the property on the installation has been transferred. A large portion of the Inland Training Ranges was assigned to the Bureau of Land Management (BLM). The other major recipient of Fort Ord property has been the California State University (CSU) system. The CSU Monterey campus is located on the site of the former Fort Ord and is expected to expand in the future. Other areas on the installation have been or will be transferred to federal, state, local, and private entities through economic development conveyance, public benefit conveyance, negotiated sale, or other means.The reuse of the former Fort Ord following transfer of property increases the possibility of the public beingexposed to explosive hazards. In November 1998, the Army agreed to evaluate OE at former Fort Ord in an OE Remedial Investigation/Feasibility Study (RI/FS) consistent with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). A Federal Facility Agreement (FFA) was signed in 1990 by the Army, EPA, and the California Environmental Protection Agency's Department of Toxic Substances control (DTSC; formerly the Department of Health Services or DHS). The FFA established schedules for performing remedial investigations and feasibility studies and requires that remedial actions be completed as expeditiously as possible. In April 2000, an agreement was signed between the Army, EPA and DTSC to evaluate OE at theformer Fort Ord subject to the provisions of the Fort Ord FFA.EPA OU-01: Fritzsche Army Airfield Fire Drill AreaAn investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wassigned in September 1995. Groundwater cleanup standards were established in the ROD which must be met through the existing pump and treat system. The selected remedy is consistent with the initial action described above. The groundwater treatment system was installed in 1988. In 2004, the Army awarded a fixed price contract for the management and completion of the groundwater cleanup remedy at Operable Unit 1.EPA OU-02: Fort Ord LandfillOne on-site area is a 150-acre landfill that was primarilyused to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Record of Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed.The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. In 1994, the Army completed an investigation focusing on groundwater andsoil contamination originating from the landfill. A Record of Decision (ROD) was signed in August 1994. The ROD included capping the landfill and installing a groundwater pump and treatment system. Construction of the groundwater treatment system is complete and is operational.In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

provide more clean land for re-use. The changes are documented in the Explanation of Significant Differences (ESD) in August 1996.The consolidation is complete and capping of the main landfill was completed in December 2002. The Army has installed an active landfill gas extraction and treatment system to capture and remediate methane andother volatile organic compound gases that are being generated by decaying materials in the landfill. The Army continues to monitor landfill gases to ensure that do not pose a health hazardEPA OU-03: Overall SiteIn 1990, the Army began further investigations into the nature and extent of on- and off-site soil and groundwater contamination, as well as any ecological or health threats that may be present. The investigation identified three waste disposal sites, firing ranges, and a vehicle maintenance area that require extensive cleanup actions. The Army completed the RI/FS and ROD in 1997, and all soil cleanup actions are complete, and groundwater pump and treatment systems are operational. The action included remediating the Sites 2/12 maintenance/disposal area by soil excavation and ongoing groundwater remediation, Sites 16/17 disposal area by soil excavation, Site 31 disposal area by soil excavation, and Site 39 small arms ranges by soil excavation. Most of the excavated soils were placed at the Fort Ord Landfill, which was closed in December 2002. The Army is currently evaluating treatment/disposal options for additional Site 39 soils to be excavated.Site 39, which includes the Multi-Range Area (MRA), was reportedly used sincethe early 1900s for small arms training and ordnance training exercises, including onshore naval gunfire. Over the years, in addition to small arms rounds, various types of ordnance have been used or found in the MRA, including hand grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, petroleum hydrocarbons, and other metals associated with training activities. Ordnance is being addressed through other remedial or removal actions.Site 39 comprises approximately 8,500 acres in the southern portion of Fort Ord. Site 39 is bounded byEucalyptus Road to the north, Barloy Canyon Road to the east, Boundary Road and South Boundary Road to the south, and General Jim Moore Blvd to the west.Results of the RI indicate the metals lead and beryllium, explosive compounds, and organic compounds are present in shallow soil above background concentrations in localized areas at Site 39, and are associated with past military training activities.Spent ammunition found at the Small Arms Ranges consists of bullets, black powder rifle balls, and lead shot. Lead is the primary chemical of concern in soil at the Small Arms Ranges at Site 39. In localized areas, spent ammunition is found on the ground surface.An Explanation of Significant Differences addressing OU 3 was completed in December2003.EPA OU-04: Surface SoilsEPA OU-05: No Action SoilsEPA OU-07: Site 3 Beach RangeSite 3 is situated within about 3.2 miles (780 acres) of dunes along the coastline of Monterey Bay at the western boundary of Fort Ord. Results of the investigation indicate lead from small arms is the main contaminant at the site. The site is also home of the Smith's Blue butterfly, an endangered species, and buckwheat plants which the butterflies use to lay their eggs on. In 1997, the Army completed a ROD allowing them to first clean up the lead contamination to address human health concerns by soil excavation and placement in the Fort Ord Landfill, which was simultaneously being remediated (capped). This cleanup was completed in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well.EPA OU-08: OE Track 0 (No Further Action)The Track 0 process addresses single or grouped areas of land at the former Fort Ord that have no history of OE-related use and for which No Action is necessary to protect human health and the environment. These areas consist largely of land that has been developed for military support or residential use throughout Fort Ord's history and areas

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

that have no physical or documented evidence of OE-related training. A Track 0 Special Case area includes a former landfill where OE scrap items were found buried with refuse. No OE-related activities occurred in the area and the OE scrap items and the refuse were entirely removed.Track 0 areas were grouped geographically: e.g., all non-OE land in the Main Garrison was grouped and discussed together as one area. Track 0 includes parcels in the following areas:- Highway 1 Area- Golf Course Maintenance Area- Brostrom Park Area- Patton/Abrams Park Housing Area- Open Space, Main Entrance Area- Surplus II Area- Fritzsche Army Airfield Area- East Garrison Area- Main Garrison Area- OU 2 Landfill Area- Reservation Road AreaTrack 0 sites were addressed by a No Further Action Record of Decision (ROD) dated July 2, 2002.The Army has been conducting military munitions sampling and removal actions at identified Munitions Response Sites (MRS) and will continue these actions to mitigate imminent MEC-related hazards to the public while gathering data about the type of military munitions and level of hazard at each of the sites for use in the base-wide MR RI/FS. The Army is performing its activities pursuant to the President's authority under the CERCLA Section 104, as delegated to the Army in accordance with Executive Order 12580 and in compliance withthe process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will continue to be involved. The Army is preparing the MR RI/FS for Fort Ord to address MEC-related hazards. The MR RI/FS will review and evaluate past investigative and removal actions, as well as recommend future response actions deemed necessary to protect human health and the environment on the basis of proposed reuses specified in the Fort Ord Reuse Authority (FORA) Reuse Plan.The information to be evaluated during the MR RI/FS will include site knowledge, the quality of the available information,work completed, and intended future land uses. The base-wide MR RI/FS will contain a comprehensive evaluation of all MEC-related data for the entire former Fort Ord and will evaluate long-term response alternatives for cleanup and risk management ofMEC.The MR RI/FS is organized as a "tracking" process whereby sites with similar characteristics will be grouped to expedite cleanup, reuse, and/or transfer based on current knowledge. The Track 0 Record of Decision (ROD) addresses areas on the former Fort Ord that have been identified as requiring no munitions response to protect human health (public safety) and the environment (Track 0 areas). Other Track (1 through 3) areas will be addressed separately for the other lands that have or are suspected to have a history of military munitions-related use and investigations completed to date. Track 1 sites were suspected to have been used for training with military munitions but for which no further response action is required because they fall into one of the three categories defined in Record of Decision, No Further Action Related to Munitions and Explosives of Concern-Track 1 Sites; No Further Remedial Action with Monitoring for Ecological Risks from Chemical Contamination at Site 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are known or suspected to be present, but MEC investigations have not yet been completed.All base-wide MR RI/FS documents have been or will be prepared in cooperation with the EPA and DTSC in accordance with the Fort Ord FFA; made available for public review and comment; and placed in the Administrative Record and local information repositories.A ROD addressing OU 8 was completed in 2002. An Explanation of Significant Difference (ESD) pertaining to the OU8 ROD was completed in April of 2005.EPA OU-09: OE Track 1Track 1 sites are sites where munitions and explosives of concern were suspected but no further remedial action was deemed necessary to protect human health and the environment. The Track 1 Proposed Plan was issued for public comment on September 15, 2004 and

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the ROD is scheduled to be signed in 2005.EPA OU-10: OE at Ranges 43-48, Range 30A, and Site OE-16Ranges 43-48 cover approximately 498 acres to the south of Eucalyptus Road in the south-central portion of the former Fort Ord. The majority of the site is designated as habitat reserve and will remain undeveloped (473 acres), and a limited portion of the site (25 acres) will be developed and reused.These ranges were part of the former Fort Ord's Multi-Range Area (MRA) and are categorized as firing ranges where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Ranges 43-48 mainly consists of central maritime chaparral (CMC)with some grassland areas.Training facilities maps indicate these ranges were used for a variety of live fire exercises from the 1940s through the 1990s. Records and recent field investigations indicate the ammunition used at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitank weapon (LAW); small arms; practice anti-personnel mines; dragon guided missiles; practice claymore mines; and fragmentation hand grenades.The former firing ranges contain sensitively fuzed, highly dangerous OE present on the ground surface or at shallow depths below the ground. As described above, numerous types of OE ranging from hand grenades to 90mm recoilless rifle rounds are known or suspected to be on the site. During recent limited surface removals in 2001, thousands of OE items were recovered at Ranges 43-48.This Interim Action site is adjacent to (less than 4,000 feet from) residential neighborhoods at Ord Military Community (Fitch and Marshall Parks) and is near the City of Seaside. The Fitch and Martin Luther King Jr. Middle Schools are located less than a mile from Ranges 43-48. Existing site security measures include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In the last three years, five documented incidents of persons trespassing into the Ranges 43-48 site occurred. In 1999, there were two documented cases of children entering the fenced MRA at Ranges44 and 45, and collecting and removing 40mm practice grenades found on the ground surface. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The majority of this Interim Action site is designated as habitat reserve and will remain undeveloped. Future reuse of Transfer Parcel E21b.3 is development.Range 30A includes approximately 388 acres located in the southeastern portion of the MRA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerFort Ord MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Range 30A mainly consists of CMC with somegrassland areas.Range 30A was constructed in 1990 as a 40mm machine gun range and was in use until 1993. According to the Fort Ord Training Ranges Standard Operating Procedure (SOP), the only weapon authorized for use at Range 30A from 1991 and 1992was the MK19 40mm machine gun, Mod 3. Ammunition authorized for use at Range 30A included HE, high explosive dual purpose (HEDP) and target practice (TP).Range 30A is known to contain sensitively fuzed, highly dangerous 40mm grenades and evidence of60mm and 81mm mortars and 37mm, 75mm, 155mm, and 8-inch projectiles. Limited surface removals in 2001 in the accessible areas of Range 30A have recovered hundreds of whole or partial OE and OE scrap items.The Range 30A Interim Action site is locatedin close proximity (approximately 2,200 feet north) to the Laguna Seca residential area and Laguna Seca Golf Course, and less than a mile from the Laguna Seca Raceway.

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

South Boundary Road, located approximately 2,000 feet to the south, is open to vehicular traffic during events at Laguna Seca Raceway and is always open to the public for jogging, hiking, and biking. This range was part of the former Fort Ord's MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Existing access deterrents include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), and three other incidents of fence damage were reported within 4,000 feet of the range (near Range 29). Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.As part of the closure of the former Fort Ord, the MRA will be transferred to the BLM and most of the MRA will remain undeveloped as habitat reserve. The habitat management plan (HMP) presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.Site OE-16 includes approximately 80 acres located immediately north of the former Fort Ord MRA, between Eucalyptus and Parker Flats roads and bounded by Watkins Gate Road to the east (Plate 5). This site will become habitat reserve and will remain undeveloped. The Bureau of Land Management (BLM) land (immediately adjacent) is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence. The site is posted with signs warning of the dangers associated with unexploded ordnance. Vegetation at Site OE-16 mainly consists of CMC with some grassland areas.Site OE-16 is a World War II (WWII) era rocket range, and is identified as a "bazooka practice" area on Fort Ord Training Facilities maps dating from 1945 and 1946. Available training maps after 1946 do not identify the bazooka practice area. According to Fort Ord Range Control, this range was probably used as an antitank rocket range during and shortly after WWII. Available information indicates that Site OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site was later used for a portion of time as an anti-armor training area. Evidence from the site indicates that both practice and HEAT rounds were used.Site OE-16 contains sensitively fuzed, highly dangerous OE, such as HEAT projectiles, present on the ground surface or at shallow depths below the ground. During recent limited surface removals in 2001, hundreds of OE items, including expended and live 2.36-inch rockets (practice and HEAT), practice antitank mines, rifle grenades, hand grenade fuzes, and OE scrap were recovered.Site OE-16 is located adjacent to the MRA and land that has been transferred to the BLM. The BLM land is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence posted with signs warning of the dangers associated with unexploded ordnance. The site is in close proximity to a residential neighborhood (Fitch Park) on the former Fort Ord. In 2001, an incident of persons trespassing withinthe MRA adjacent to Site OE-16 was reported. In addition, five incidents of trespassing into the MRA adjacent to Site OE-16 occurred within the last three years. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The land that includes Site OE-16 will be transferred to the BLM and will remain undeveloped as habitat reserve. The HMP for former Fort Ord presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.An Interim Action Record of Decision addressing OE at EPA OU-10 was signed in September 2002.The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acres was burned. The Army is studying the October 2003 burn to understand both what went right and what went wrong. Ordnance has been cleared from the surface of the entire burned area and subsurface clearance is ongoing. The next prescribed burn is scheduled to take place in 2005.OU-10 Track 2 Sites:Track 2 sites are sites where munitions and explosives of concern were found and a removal action was conducted to clean it up. The first of several Track 2 RI/FS reports is due to be issued in 2005 for the area of Fort Ord known as Parker Flats.EPA OU-11: OE Track 3Track 3 sites are sites where munitions and explosives of concern are known to be present but no cleanup has been conducted yet. The final Track 3 ROD is expected to be completed by 2007, with UXO cleanup work continuing for at least 10 years thereafter.EPA OU-12: Carbon Tetrachloride PlumeThe Army has initiated a remedial investigation/feasibility study of another area of groundwater contamination, the so-called "carbon tetrachloride plume operable unit", near the City of Marina. Contaminants slightly above regulatory standards have been found in offsite groundwater. This area of contamination is not being used for drinking water. Potential source areas are also being investigated. A soil vapor sampling and extraction system pilot study was conducted in 2004 to address the vadose zone above the carbon tetrachloride plume area. The pilot study was very successful and appears to have removed significant mass from the vadose zone. The Army expects to complete the draft Remedial Investigation/Feasibility Study Report for the carbon tetrachloride plume operable unit in 2005.OU 9:A list of the 21 Track 1 sites for which No Further Action Related to MEC is required is comprised of:MRS-1-Flame Thrower Range: The site is 25 acres in size, and is located in the northwestern part of former Fort Ord. MRS-1 is currently occupied by housing. Proposed reuse plans include residential development. Based on the literature review and sampling, the site appears to have been used for camouflage training, mine and booby trap training, non-firing mortar training, and flame thrower training. Most of this area has been used for military housing for over 40 years.MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housing. The site is currently undeveloped with proposed reuse plans to include development with reserve areas or development with restrictions. Review of training maps, aerial photographs, and other Fort Ord maps indicate mine and booby trap training occurred at the site. The adjacent areas have been used as a school and military housing for over 40 years.MRS-13A-Practice Mortar Range: The site is 61 acres in size, and is located in the northern portion of the former Fort Ord. Proposed reuse plans for MRS-13A include residential development and a park. The majority of the site has contained residential housing for nearly 30 years. The area was extensively graded in the 1970s and housing was built on portions of the site. The western portion of the site was used as a landfill in the 1960s. All landfill material in the western portion of MRS-13A was excavated (removed) and transported tothe main landfill south of Immix Road in the 1990s. Several munitions debris items and three unexploded ordnance (UXO) items were identified within and adjacent to MRS-13A during landfill excavation and housing development grading activities and were removed: three live ground signals and loose pyrotechnic material; three inert hand grenade primer detonators; two inert 40mm signal cartridges; an inert fin assembly for a 3.5-inch rocket; a live rifle grenade; miscellaneous projectiles; and two inert 3.5-inch rocket motors.MRS-20-Recoilless Rifle Training Range: The site is 7 acres in size, and is located in the southwestern portion of the Main Garrison near residential housing and Highway 1. This site is currently open space with

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

proposed reuse plans, which include development. The site was identified as a potential Recoilless Rifle Training Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in some cases, could be fired by either method.MRS-22 (Site 3)-Beach Trainfire Ranges: The site is 952 acres in size, and is located on the Monterey Baycoastline along the western margin of former Fort Ord as shown on Plate 2. The site is currently open space with the proposed reuse of the site to include a State park with open space and recreational areas. Training maps, aerial photographs, and interviews indicate the site was used as the Beach Trainfire Ranges from 1940s until base closure in 1994. The ranges contained 17 small arms firing ranges; an obstacle course; a bivouac area; a rifle instruction circle; a bayonet assault course; chemical, biological, and radiological (CBR) training areas; target detection training areas; an infiltration course; and a former ammunition supply point. CBR training at MRS-22 (Site 3) only involved training troops in the identification of targets while wearing gas masks, and did not involve the use of chemical, biological or radiological materials. Training at the Beach Trainfire Ranges reportedly also included occasional practice mortar use with inert training devices, amphibious assault landings, and battle demonstrations.MRS-24B-Practice Hand Grenade Range: The site is 14.2 acres in size, and is located in the west-central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the Impact Area. MRS-24B will continue to be used for military housing. Historical and sampling information indicate the site was used as practice hand grenade range in the 1940s.MRS-24D-Booby Traps: The site is 1.8 acres in size, and is located in the west central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as a "Booby Traps" and squad patrol training area based on review of a 1946 historical map; however, the site boundary was northwest of the area shown as "Booby Traps" on 1945 and 1946 training maps.MRS-24E-Practice Rifle Grenade Range: The site is 2.7 acres in size, and is located in the west central portion of former Fort Ord. The site is also located south of the Main Garrison and just north of the former Impact Area within a military housing complex. MRS-24E will continue to be used for military housing. MRS-24E was identified as a Practice Rifle Grenade Range on 1945/1946 training maps, but no evidence of this use was discovered during sampling at the site.MRS-27X-Training Site 24: The site is 79.5 acres in size, and is undeveloped open space located in the southeastern portion of former Fort Ord. MRS-27X is currently a habitat reserve area managed by the Bureau of Land Management (BLM), and is open to the public for recreational use. Based on review of Fort Ord training maps, the site was used as a troop training and maneuver area from the 1950s to 1970s, and as an overnight bivouac area and medical training area in the 1980s.MRS-27Y-Training Site 25: The site is 25 acres in size,and is mainly undeveloped open space located in the eastern portion of former Fort Ord along Inter-Garrison Road. A small portion of the site also lies on property that was transferred to California State University Monterey Bay in 1995 for development. The site was identified as one of 26 training sites within Fort Ord Training and Maneuver Areas used as troop training, maneuver, and overnight bivouac areas.MRS-32A-Oil Well Road Training Area: The site is 38 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as atank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and as a troop training and

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

maneuver area from 1950s to 1980s.MRS-32B-Oil Well Road Training Area II: The site is 47 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32B include maintaining the land as habitat reserve. Based on historical training maps (circa 1954 and 1956), it was identified as the "Oil Well Road Training Area"; a portion of the site was reportedly used as a Tank Gunnery Range in 1950s; and the site may also have been used for firing of shoulder-launched projectiles.MRS-39-Mine and Booby Trap Area: The site is 12.1 acres in size, and is located east of General Jim Moore Boulevard and south of Gigling Road in the Marshall Park housing area. MRS-39 will continue to be used for military housing. The site was identified as a Mine and Booby Trap Training Area on 1957/1958 maps.MRS-49-Former Rifle Grenade Range: The site is 28 acres in size, and is located in the west central portion of former Fort Ord, south of Main Garrison and just north of military housing. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a training area and rifle grenade range in the 1940s and 1950s based on interviews conducted during the Preliminary Assessment/Site Inspection (PA/SI) phase of the Fort Ord Archive Search.MRS-59A-Unnamed: The site is 41 acres in size, and is located in the eastern portion of former Fort Ord near the East Garrison and MRS-5. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a possible 2.36-inch rocket range during interviews conducted during the PA/SI phase of the Fort Ord Archive Search. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps.MRS-62-Laguna Seca Open Space: The site is 247 acres in size, and is located at the southern end of former Fort Ord. The site is currently open space andproposed reuse plans include development. The site was identified as a small arms and flare training area during an interview with a former Fort Ord Fire Chief conducted during the PA/SI phase of Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, the site was used as a troop training and maneuver area from the late 1940s through 1980s; and the southern half of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-62 lies within a larger area identified during interviews conducted as part of the Archives Search as "Area T" and was a described as a general area where training may have occurred. The boundary of MRS-62 is based on transfer parcel delineation and not on evidence of munitions use. The boundary of MRS-62 was established to correspond to with disposal Parcel L20.6. Although the size of the parcel to be transferred has changed over time, the boundary of MRS-62 corresponds with the current boundary of Parcel L20.6.MRS-63-Canyon Training Area: The site is 28 acres in size, and is located at the southern end of former Fort Ord east of MRS-62. MRS-63 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as a small arms and flare training area during the PA/SI phase of the Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, most of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators.MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majority of the site lies on property transferred to California State University Monterey Bay (CSUMB) that is currently used for student housing or is proposed for development. A small portion of the site lies on property that is designated as habitat reserve. The site was identified as a reported signal corps field training area during the PA/SI phase of Fort Ord Archive Search, and other uses included aviation

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

training, basic unit training, and a bivouac area from 1950s until housing construction in 1989.MRS-69-Unnamed: The site is 37 acres in size, and is undeveloped open space located on the eastern side of former Fort Ord. MRS-69 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as an area of possible rifle grenade use based on interviews with a former Fort Ord Fire Chief. This site is within land transferred to the BLM and is open to the public for hiking, biking, and horseback riding. Use is limited to marked trails. The public has had access to this area for approximately 6 years.MRS-70-Unnamed: The site is 14 acres in size, and is located on the southeastern side of former Fort Ord, south of Oil Well Road. The site is currently a habitat reserve area managed by BLM, and is open to the public for recreational use. The area encompassing MRS-70 was identified as containing firing berms based on interviews with a former Fort Ord Fire Chief.A ROD addressing OU 9 was completed in April 2005.Operable Unit 2:The Fort Ord Landfills area was designated as Operable Unit 2 (OU2) when a remedial investigation identified the presence of volatile organic compounds (VOCs) associated with landfilled materials in groundwater beneath the site. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated groundwater and ongoing remediation of groundwater associated with OU2 is being conducted in accordance with the OU2 Record of Decision (ROD) and the Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD).In accordance with the OU2 ROD and the Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills, the Army completed removal and consolidation of refuse from the north landfill into the main landfill in October 1998 and installation of an engineered cover system for the main landfill in December 2002 as part of the closure process for the Fort Ord Landfills.At the Fort Ord Landfills, the perimeter fence line was initially designated as the boundary for landfill gas (LFG) compliance monitoring in accordance with applicable or relevant and appropriate requirements (ARARS) and LFG monitoring probes were installed inside the fence line. Monitoring of these probes commenced in June 2000. Fixed-based laboratory results and field measurements showed methane concentration exceeding the 5% regulatory standard in most probes. The Army performed an additional investigation in August 2000 and sampling results showed that methane was detectable extending out about 70 feet front the fence line on the east side of Area F. All probes were monitored again in September and December 2000, with the results again showing methane concentrations exceeding the 5% standard. In response the Army installed additional probes at locations around the outer parts of the OU2 property beyond the fence line in April and May 2001. Analytical results for these probes indicated that methane concentrations at the property boundary were less than the 5% standard, with the exception of the east side of Area F.The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volatile organic compounds (VOCs) in air between the Fort Ord Landfills and the nearest housing. These data were used to complete a screening levelhuman health risk assessment (HHRA) for nearby residences. The HHRA was updated after each monitoring event and attached as an appendix to each ambient air monitoring report. The HHRA concluded that there is a health risk for long-term exposure to VOCs in ambient air; however, the Army determined the data evaluated in the HHRA were limited and additional monitoring would be appropriate. Additional ambient air monitoring was conducted on a quarterly basis in 2003 and the HHRA updated to include these data and evaluate specifically landfill-related risk. The updated HHRA indicated the Fort Ord Landfills are not a significant contributor of VOCs

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

in ambient air or risk to downwind receptors.The following remedies for the Fort Ord Landfills were selected in the OU2 ROD:- A cover system to (1) prevent rainwater from percolating through the landfilled areas into the underlying aquifers; (2) collect and remove methane offgas (if necessary); and (3) prevent exposure of sanitary waste in the landfills to the surrounding environment.- Institutional controls (i.e., deed restrictions) to be placed on the property to ensure that the integrity of the cover system is maintained and prevent potential direct exposures of VOCs to the environment or people associated with future use of the site.- Institutional controls (i.e., deed restrictions) that prevent the use of groundwater within the contaminant plume.- Groundwater extraction and treatment, to be monitored on a regular basis and adjusted as warranted by the performance data collected during operation. Additionally, treated groundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface.Three previous ESDsto the OU2 ROD have been completed:- Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD). The OU2 ESD finalized the cleanup standard for the Upper 180-foot Aquifer to be consistent with those of the A-aquifer to facilitate the coordinated cleanup strategy for both aquifers. - Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills (Area A ESD). The Area A ESD addressed excavation and consolidation of refuse from the north landfill (Area A) into the main landfill (Areas B through F).- Explanation of Significant Differences, Consolidation of Remediation Waste in a Corrective Action Management Unit, Operable Unit 2, Fort Ord Landfills (CAMU ESD). The CAMU ESD addressed using remediation waste as foundation layer material instead of "clean" (uncontaminated) soil as described in the OU2 ROD.An additional ESD addressing OU2 was completed in October of 2006.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Delof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms tarsives. Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented informer Fort Ord subject to the provisions of the Fort Ord FFA. EPA OU-01: Fritzsche Army Airfield Fire Drill Area An investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wter treatment system is complete and is operational. In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will provide more clean land for re-use. The changes are documented in the Explanation of Signd grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, p in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well. EPA OU-08: OE Track 0 (No Further Action)the process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will contite 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are kned at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitanA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), an OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site wd of Decision addressing OE at EPA OU-10 was signed in September 2002. Operable Unit 10: MRS-3 Based on the MRS-3 sampling results, a MEC removal to four feet bgs was recommended per the Final Phase I Engineering Evaluation/Cost Analysis (Phase I E MEC items were removed. In addition, 293 items were removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Most of the items found at MRS-4B were consistent with the reportt MRS-13B at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from burial pits included grenade and mine fuzes, firing devices, pyrotechnics (signal, illumination and smoke), rockets, rifle and hand smoke grenades, blasting caps,items found within MRS-27G were generally of the types associated with overnight bivouac training sites and general maneuver areas. Within MRS-27G's boundaries a small number of 75 millimeter (mm) and 37mm items were removed, inspected and determinedemoval to four feet bgs. This MRS was subsequently subdivided into 240 100- X 100-foot removal grids. An investigation for MEC was conducted using the Schonstedt Model GA-52/Cx magnetometer, with all detected MEC removed. 50 MEC items were removed. Iere removed. In addition, 149 pounds of debris was removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Of the 26 MEC items recovered, 2 munitions (a MK I 75mm Shrapnel prtems were non-penetrating (e.g., pyrotechnics, grenades, and grenade and projectile fuzes) munitions. The penetrating military munitions found included projectiles, rifle grenades, and rockets. Both DMM and MD were found in numerous burial pits thatated all detected anomalies at 52 100- X 100-foot grids using a Schonstedt Model GA-52/Cx magnetometer. During this investigation, 19 MEC items were removed. In addition, 453 pounds of debris was removed, inspected and determined not to pose an exploal pits were discovered during the removal conducted at MRS-53. Both DMM and MD were found in burial pits at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from these pits included fuzes (grenade, mine, time, and projectile), sich 1998, 23 100- X 200-foot grids were identified at MRS-55. Subsequently, 19 of these grids were surveyed using a Schonstedt Model GA-52/Cx magnetometer with a maximum search lane width of 5 feet. Following the survey, anomalies were selected for in). Other sources of future land use information include public benefit conveyance, negotiated sale requests, transfer documents, and the Installation-Wide Multispecies Habitat Management Plan for Former Fort Ord, California. The Reuse Plan identifiedin ground disturbing activities (e.g., during construction/excavation). A ROD addressing Operable Unit 10 was completed in August 2008. The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acresm Action in the Record of Decision, Interim Action for Ordnance and Explosives at Ranges 43-48, Range 30.A, and Site OE-16, Former Fort Ord, California (Interim Action ROD; .Army, 2002), and the implementation of MEC remediation under the Interim Acton tetrachloride (CT) detected in three different aquifers up to 550 feet below ground surface (bgs). No records exist to indicate exactly when, how often, or how much CT may have been used, stored, or disposed of; however, by delineating

the areas od by the Marina Coast Water District (MCWD) and is pumped from wells that are located east of the OUCTP area screened in the Lower 180-Foot Aquifer. Based on groundwater monitoring data and data provided by the MCWD, these drinking water wells have nnd flame thrower training. Most of this area has been used for military housing for over 40 years. MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housTraining Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in soesidential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as aBooby Traps and squad patrol training area based on revied reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as a tank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and a. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps. MRS-62-L78 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majoritsite. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated grounof Area F. The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volroundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface. Three previous ESDs to the OU2 ROD have been completed: - Explanation of Significant Differences, Operable Unit 2, Fort O

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES

WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008
Waste name: LEAD

Waste code: D009
Waste name: MERCURY

Waste code: D011
Waste name: SILVER

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Corrective Action Summary:

Event date: 04/01/1986
Event: CA049PA

Event date: 04/01/1986
Event: CA029SF

Event date: 06/01/1987
Event: CA049SI

Event date: 01/01/1988
Event: Stabilization Measures Implemented, Groundwater extraction and treatment (e.g., to achieve groundwater containment, to achieve MCL).

Event date: 12/01/1988
Event: Stabilization Construction Completed

Event date: 07/23/1990
Event: RFI Imposition

Event date: 07/23/1990
Event: CMS Imposition

Event date: 12/01/1991
Event: CMS Workplan Approved

Event date: 12/01/1991
Event: RFI Workplan Approved

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

Event date: 01/17/1995
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 01/01/1996
Event: CA Responsibility Referred To A Non-RCRA Federal Authority, Corrective Action at the facility or area referred to CERCLA.

Event date: 08/08/1996
Event: RFA Completed, Assessment was an RFA.

Event date: 01/13/1997
Event: CMS Approved

Event date: 01/13/1997
Event: Date For Remedy Selection (CM Imposed)

Event date: 01/13/1997
Event: RFI Approved

Event date: 04/08/1998
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 04/08/1998
Event: CA Responsibility Referred To A Non-RCRA Federal Authority

Event date: 04/08/1998
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 04/08/1998
Event: Current Human Exposures under Control, Current human exposures are NOT under control.

Event date: 05/22/2000
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 05/22/2000
Event: Current Human Exposures under Control, Current human exposures are NOT under control.

Facility Has Received Notices of Violations:

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Completed Info:

Completed Area Name:	PROJECT WIDE
Completed Sub Area Name:	Not reported
Completed Document Type:	Site Screening
Completed Date:	1990-09-28 00:00:00
Comments:	THE SITE IS A DRY-CLEANING OPERATION. IN JANUARY, 1990, THE CENTRAL COAST RWQCB DISCOVERED VOLATILE ORGANIC COM- POUNDS IN GROUNDWATER BENEATH THE BEACON GAS STATION LOCATED NEXT TO THE SITE (700 LIGHTHOUSE AVENUE). ALTHOUGH MOST OF THE CONTAMINANTS ENCOUNTERED APPEAR TO HAVE ORIGINATED FROM THE GAS STATION, RWQCB SUSPECTS THAT SOME OF THE CONTAMI- NANTS ARE ORIGINATING FROM THE DRY- CLEANER.

Map ID	Site	Database(s)	EPA ID Number

ONE HOUR MARTINIZING (Continued) **S101481334**

RWQCB HAS REQUESTED THAT ONE- HOUR MARTINIZING LIKEWISE CONDUCT A SITE INVESTIGATION TO DETERMINE THE EXTENT & ORIGIN OF THE CONTAMINATION. RWQCB SITE SITE SCREENING DONE REFERRED TO RWQCB(CENTRAL VALLEY) UNDERGROUND TANK LEAK.

Summary Details:

Conditions at proposal July 14, 1989): Fort Ord covers 46 square miles on Monterey Bay approximately 5.6 miles north of Monterey, Monterey County, California. The installation is bordered by the City of Marina and the Salinas River to the north, El Toro Creek to the east, Seaside and Del Rey Oaks to the south, and Monterey Bay to the west. Fort Ord was established in 1917 as a maneuver area and field artillery target range for units then stationed at the Presidio of Monterey. Its primary mission now is training. Industrial operations at Fort Ord include vehicle maintenance areas, a battery charging/repair facility, photographic processing laboratories, spray painting operations, a plastics shop, laundry/dry cleaning facilities, vehicle wash racks, and a small arms repair shop. Chemicals and ha ardous wastes were managed and disposed of at Fort Ord. According to tests conducted by the Army in 1986, elevated levels of contaminants were detected in off-base ground water. The contamination is emanating from the base and may be contaminating the drinking water supplies of the City of Marina; however, the exact location of the source has not yet been identified. The contaminants includecarbon tetrachloride, tetrachloroethylene, trichloroethylene, 1,1,1-trichloroethane, and trans-1,2-dichloroethylene. An estimated 38,600 people obtain drinking water from wells within 3 miles of ha ardous substances on the fort. Ground water is also used for irrigation. In addition, soil and ground water are contaminated at the Fire Drill Area, where approximately 600 gallons of petroleum products have been spilled. Fort Ord has identified at least 18 other contamination problems.Fort Ord is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part of IRP, theArmy is implementing a sampling plan to investigate ground water contamination. The Army is treating contaminated soil and ground water at nearby Frit sche Army Airfield Fire Drill Area. Status February 21, 1990): IRP activities continue.

Site Description: The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. Environmental investigations began at Fort Ord in 1984 under the Regional Water Quality Control Board (RWQCB) cleanup or abatement orders. In 1986, further investigations began at Operable Unit 2 (OU2). In 1990, Fort Ord was placed on the National Priorities List (NPL) because of Volatile Organic Compounds (VOCs) found in ground water beneath OU2. A Federal Facility Agreement (FFA) was signed in 1990 by the Army, U.S. Environmental Protection Agency, the California Environmental Protection Agency's Department of Toxic Substances Control (DSTC)

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and Regional Water Quality control Board (RWQCB). The FFA established schedules for commencing Remedial Investigations and Feasibility Studies (RI/FS). In 1991, the basewide RI/FS began and Fort Ord was placed on the Base Realignment and Closure list. The final FS for OU2 was completed on October 1, 1993, and the Record of Decision (ROD) was signed in August 1994. An Interim Action Plug-In ROD was signed in March 1994 for excavation and treatment of shallow contaminated soils. The Draft and Draft Final Versions of the Basewide RI/FS were completed in August 1994 and December 1994, respectively.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Del Rey Oaks to the south and Marina to the north. The Southern Pacific Railroad and Highway 1 pass through the western portion of former Fort Ord, separating the beachfront from the rest of the base. Laguna Seca Recreation Area and Toro Regional Park border former Fort Ord to the south and southeast, respectively, as well as several small communities such as Toro Park Estates and San Benancio.There are three main developed areas within Fort Ord: the Main Garrison, the East Garrison and Fritzsche Army Airfield (FAAF). The Main Garrison contains commercial, residential, and light industrial facilities. The East Garrison occupies 350 acres on the northeastern edge of the base and consists of military and industrial support areas, recreationalfacilities, and recreational open space. The FAAF serves as the general airfield for Fort Ord. EPA placed the site on the National Priorities List in 1990. Several areas of contamination exist on site. Generally, chemicals present in soil are the result of former routine maintenance and support activities on Fort Ord. Such activities include: maintenance of military vehicles at wash racks, tank storage of chemicals such as waste oil, the use of oil/water separators in drainage areas, and pesticide use and storage. The facility contained leaking petroleum underground storage tanks, containers of waste oil and various automotive chemicals, chemical storage areas, oil-waste separators, target ranges, and landfills. One on-site area is a 150-acre landfill that was primarily used to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Recordof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms target ranges. Over 12,000 acres are suspected of containing ordnance and explosives (OE). In particular, the 8,000 acre Multi-Range Area (MRA) is known to contain dangerous unexploded ordnance. OE investigations are complicated by technological limitations and protected habitat that covers the area and requires special management pursuant to the base Habitat Management Plan (HMP). This includes the current requirement to use prescribed burns to clear vegetation prior to OE removal. The HMP currently restricts burns to 800 acres/year, thus requiring at least 10 years to address OE in the MRA.The aquifers at the site are called the upper aquifer and the 180-foot aquifer. Approximately 40,000 people obtain drinking water from wells located within 3 miles of the site.Since opening in 1917, Fort Ord served as a training and staging facility for Army infantry troops. No permanent improvements were made until the late 1930s when administrative buildings, barracks, mess halls, tent pads, and a sewage treatment plant were constructed. The Main Garrison was constructed between 1940 and the 1960s, starting in the northwest corner of the base and expanding southeastward. The FAAF was incorporated into Fort Ord in 1961. Since 1917, portions of the Installation were used by infantry units for maneuvers, target ranges, and other purposes. Ordnance and explosives (OE) that have been fired into, fired upon, or used on the facility include artillery and mortar projectiles, rockets

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and guided missiles, rifle and hand grenades, practice land mines, pyrotechnics, bombs, and demolition materials. A wide variety of conventional OE items have been located at sites throughout the former Fort Ord, including pyrotechnics and explosives.Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented in preparation for transfer and reuse of former Fort Ord property. The Ord Military Community, located within the Main Garrison portion of former Fort Ord, will be retained by the Army. Since base closure in September 1994, lands outside the Ord Military Community have been subjected to the reuse process. Some of the property on the installation has been transferred. A large portion of the Inland Training Ranges was assigned to the Bureau of Land Management (BLM). The other major recipient of Fort Ord property has been the California State University (CSU) system. The CSU Monterey campus is located on the site of the former Fort Ord and is expected to expand in the future. Other areas on the installation have been or will be transferred to federal, state, local, and private entities through economic development conveyance, public benefit conveyance, negotiated sale, or other means.The reuse of the former Fort Ord following transfer of property increases the possibility of the public beingexposed to explosive hazards. In November 1998, the Army agreed to evaluate OE at former Fort Ord in an OE Remedial Investigation/Feasibility Study (RI/FS) consistent with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). A Federal Facility Agreement (FFA) was signed in 1990 by the Army, EPA, and the California Environmental Protection Agency's Department of Toxic Substances control (DTSC; formerly the Department of Health Services or DHS). The FFA established schedules for performing remedial investigations and feasibility studies and requires that remedial actions be completed as expeditiously as possible. In April 2000, an agreement was signed between the Army, EPA and DTSC to evaluate OE at theformer Fort Ord subject to the provisions of the Fort Ord FFA.EPA OU-01: Fritzsche Army Airfield Fire Drill AreaAn investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wassigned in September 1995. Groundwater cleanup standards were established in the ROD which must be met through the existing pump and treat system. The selected remedy is consistent with the initial action described above. The groundwater treatment system was installed in 1988. In 2004, the Army awarded a fixed price contract for the management and completion of the groundwater cleanup remedy at Operable Unit 1.EPA OU-02: Fort Ord LandfillOne on-site area is a 150-acre landfill that was primarilyused to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Record of Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed.The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. In 1994, the Army completed an investigation focusing on groundwater andsoil contamination originating from the landfill. A Record of Decision (ROD) was signed in August 1994. The ROD included capping the landfill and installing a groundwater pump and treatment system. Construction of the groundwater treatment system is complete and is operational.In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

provide more clean land for re-use. The changes are documented in the Explanation of Significant Differences (ESD) in August 1996.The consolidation is complete and capping of the main landfill was completed in December 2002. The Army has installed an active landfill gas extraction and treatment system to capture and remediate methane andother volatile organic compound gases that are being generated by decaying materials in the landfill. The Army continues to monitor landfill gases to ensure that do not pose a health hazardEPA OU-03: Overall SiteIn 1990, the Army began further investigations into the nature and extent of on- and off-site soil and groundwater contamination, as well as any ecological or health threats that may be present. The investigation identified three waste disposal sites, firing ranges, and a vehicle maintenance area that require extensive cleanup actions. The Army completed the RI/FS and ROD in 1997, and all soil cleanup actions are complete, and groundwater pump and treatment systems are operational. The action included remediating the Sites 2/12 maintenance/disposal area by soil excavation and ongoing groundwater remediation, Sites 16/17 disposal area by soil excavation, Site 31 disposal area by soil excavation, and Site 39 small arms ranges by soil excavation. Most of the excavated soils were placed at the Fort Ord Landfill, which was closed in December 2002. The Army is currently evaluating treatment/disposal options for additional Site 39 soils to be excavated.Site 39, which includes the Multi-Range Area (MRA), was reportedly used sincethe early 1900s for small arms training and ordnance training exercises, including onshore naval gunfire. Over the years, in addition to small arms rounds, various types of ordnance have been used or found in the MRA, including hand grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, petroleum hydrocarbons, and other metals associated with training activities. Ordnance is being addressed through other remedial or removal actions.Site 39 comprises approximately 8,500 acres in the southern portion of Fort Ord. Site 39 is bounded byEucalyptus Road to the north, Barloy Canyon Road to the east, Boundary Road and South Boundary Road to the south, and General Jim Moore Blvd to the west.Results of the RI indicate the metals lead and beryllium, explosive compounds, and organic compounds are present in shallow soil above background concentrations in localized areas at Site 39, and are associated with past military training activities.Spent ammunition found at the Small Arms Ranges consists of bullets, black powder rifle balls, and lead shot. Lead is the primary chemical of concern in soil at the Small Arms Ranges at Site 39. In localized areas, spent ammunition is found on the ground surface.An Explanation of Significant Differences addressing OU 3 was completed in December2003.EPA OU-04: Surface SoilsEPA OU-05: No Action SoilsEPA OU-07: Site 3 Beach RangeSite 3 is situated within about 3.2 miles (780 acres) of dunes along the coastline of Monterey Bay at the western boundary of Fort Ord. Results of the investigation indicate lead from small arms is the main contaminant at the site. The site is also home of the Smith's Blue butterfly, an endangered species, and buckwheat plants which the butterflies use to lay their eggs on. In 1997, the Army completed a ROD allowing them to first clean up the lead contamination to address human health concerns by soil excavation and placement in the Fort Ord Landfill, which was simultaneously being remediated (capped). This cleanup was completed in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well.EPA OU-08: OE Track 0 (No Further Action)The Track 0 process addresses single or grouped areas of land at the former Fort Ord that have no history of OE-related use and for which No Action is necessary to protect human health and the environment. These areas consist largely of land that has been developed for military support or residential use throughout Fort Ord's history and areas

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

that have no physical or documented evidence of OE-related training. A Track 0 Special Case area includes a former landfill where OE scrap items were found buried with refuse. No OE-related activities occurred in the area and the OE scrap items and the refuse were entirely removed.Track 0 areas were grouped geographically: e.g., all non-OE land in the Main Garrison was grouped and discussed together as one area. Track 0 includes parcels in the following areas:- Highway 1 Area- Golf Course Maintenance Area- Brostrom Park Area- Patton/Abrams Park Housing Area- Open Space, Main Entrance Area- Surplus II Area- Fritzsche Army Airfield Area- East Garrison Area- Main Garrison Area- OU 2 Landfill Area- Reservation Road AreaTrack 0 sites were addressed by a No Further Action Record of Decision (ROD) dated July 2, 2002.The Army has been conducting military munitions sampling and removal actions at identified Munitions Response Sites (MRS) and will continue these actions to mitigate imminent MEC-related hazards to the public while gathering data about the type of military munitions and level of hazard at each of the sites for use in the base-wide MR RI/FS. The Army is performing its activities pursuant to the President's authority under the CERCLA Section 104, as delegated to the Army in accordance with Executive Order 12580 and in compliance withthe process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will continue to be involved. The Army is preparing the MR RI/FS for Fort Ord to address MEC-related hazards. The MR RI/FS will review and evaluate past investigative and removal actions, as well as recommend future response actions deemed necessary to protect human health and the environment on the basis of proposed reuses specified in the Fort Ord Reuse Authority (FORA) Reuse Plan.The information to be evaluated during the MR RI/FS will include site knowledge, the quality of the available information,work completed, and intended future land uses. The base-wide MR RI/FS will contain a comprehensive evaluation of all MEC-related data for the entire former Fort Ord and will evaluate long-term response alternatives for cleanup and risk management ofMEC.The MR RI/FS is organized as a "tracking" process whereby sites with similar characteristics will be grouped to expedite cleanup, reuse, and/or transfer based on current knowledge. The Track 0 Record of Decision (ROD) addresses areas on the former Fort Ord that have been identified as requiring no munitions response to protect human health (public safety) and the environment (Track 0 areas). Other Track (1 through 3) areas will be addressed separately for the other lands that have or are suspected to have a history of military munitions-related use and investigations completed to date. Track 1 sites were suspected to have been used for training with military munitions but for which no further response action is required because they fall into one of the three categories defined in Record of Decision, No Further Action Related to Munitions and Explosives of Concern-Track 1 Sites; No Further Remedial Action with Monitoring for Ecological Risks from Chemical Contamination at Site 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are known or suspected to be present, but MEC investigations have not yet been completed.All base-wide MR RI/FS documents have been or will be prepared in cooperation with the EPA and DTSC in accordance with the Fort Ord FFA; made available for public review and comment; and placed in the Administrative Record and local information repositories.A ROD addressing OU 8 was completed in 2002. An Explanation of Significant Difference (ESD) pertaining to the OU8 ROD was completed in April of 2005.EPA OU-09: OE Track 1Track 1 sites are sites where munitions and explosives of concern were suspected but no further remedial action was deemed necessary to protect human health and the environment. The Track 1 Proposed Plan was issued for public comment on September 15, 2004 and

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the ROD is scheduled to be signed in 2005.EPA OU-10: OE at Ranges 43-48, Range 30A, and Site OE-16Ranges 43-48 cover approximately 498 acres to the south of Eucalyptus Road in the south-central portion of the former Fort Ord. The majority of the site is designated as habitat reserve and will remain undeveloped (473 acres), and a limited portion of the site (25 acres) will be developed and reused.These ranges were part of the former Fort Ord's Multi-Range Area (MRA) and are categorized as firing ranges where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Ranges 43-48 mainly consists of central maritime chaparral (CMC)with some grassland areas.Training facilities maps indicate these ranges were used for a variety of live fire exercises from the 1940s through the 1990s. Records and recent field investigations indicate the ammunition used at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitank weapon (LAW); small arms; practice anti-personnel mines; dragon guided missiles; practice claymore mines; and fragmentation hand grenades.The former firing ranges contain sensitively fuzed, highly dangerous OE present on the ground surface or at shallow depths below the ground. As described above, numerous types of OE ranging from hand grenades to 90mm recoilless rifle rounds are known or suspected to be on the site. During recent limited surface removals in 2001, thousands of OE items were recovered at Ranges 43-48.This Interim Action site is adjacent to (less than 4,000 feet from) residential neighborhoods at Ord Military Community (Fitch and Marshall Parks) and is near the City of Seaside. The Fitch and Martin Luther King Jr. Middle Schools are located less than a mile from Ranges 43-48. Existing site security measures include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In the last three years, five documented incidents of persons trespassing into the Ranges 43-48 site occurred. In 1999, there were two documented cases of children entering the fenced MRA at Ranges44 and 45, and collecting and removing 40mm practice grenades found on the ground surface. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The majority of this Interim Action site is designated as habitat reserve and will remain undeveloped. Future reuse of Transfer Parcel E21b.3 is development.Range 30A includes approximately 388 acres located in the southeastern portion of the MRA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerFort Ord MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Range 30A mainly consists of CMC with somegrassland areas.Range 30A was constructed in 1990 as a 40mm machine gun range and was in use until 1993. According to the Fort Ord Training Ranges Standard Operating Procedure (SOP), the only weapon authorized for use at Range 30A from 1991 and 1992was the MK19 40mm machine gun, Mod 3. Ammunition authorized for use at Range 30A included HE, high explosive dual purpose (HEDP) and target practice (TP).Range 30A is known to contain sensitively fuzed, highly dangerous 40mm grenades and evidence of60mm and 81mm mortars and 37mm, 75mm, 155mm, and 8-inch projectiles. Limited surface removals in 2001 in the accessible areas of Range 30A have recovered hundreds of whole or partial OE and OE scrap items.The Range 30A Interim Action site is locatedin close proximity (approximately 2,200 feet north) to the Laguna Seca residential area and Laguna Seca Golf Course, and less than a mile from the Laguna Seca Raceway.

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

South Boundary Road, located approximately 2,000 feet to the south, is open to vehicular traffic during events at Laguna Seca Raceway and is always open to the public for jogging, hiking, and biking. This range was part of the former Fort Ord's MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Existing access deterrents include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), and three other incidents of fence damage were reported within 4,000 feet of the range (near Range 29). Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.As part of the closure of the former Fort Ord, the MRA will be transferred to the BLM and most of the MRA will remain undeveloped as habitat reserve. The habitat management plan (HMP) presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.Site OE-16 includes approximately 80 acres located immediately north of the former Fort Ord MRA, between Eucalyptus and Parker Flats roads and bounded by Watkins Gate Road to the east (Plate 5). This site will become habitat reserve and will remain undeveloped. The Bureau of Land Management (BLM) land (immediately adjacent) is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence. The site is posted with signs warning of the dangers associated with unexploded ordnance. Vegetation at Site OE-16 mainly consists of CMC with some grassland areas.Site OE-16 is a World War II (WWII) era rocket range, and is identified as a "bazooka practice" area on Fort Ord Training Facilities maps dating from 1945 and 1946. Available training maps after 1946 do not identify the bazooka practice area. According to Fort Ord Range Control, this range was probably used as an antitank rocket range during and shortly after WWII. Available information indicates that Site OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site was later used for a portion of time as an anti-armor training area. Evidence from the site indicates that both practice and HEAT rounds were used.Site OE-16 contains sensitively fuzed, highly dangerous OE, such as HEAT projectiles, present on the ground surface or at shallow depths below the ground. During recent limited surface removals in 2001, hundreds of OE items, including expended and live 2.36-inch rockets (practice and HEAT), practice antitank mines, rifle grenades, hand grenade fuzes, and OE scrap were recovered.Site OE-16 is located adjacent to the MRA and land that has been transferred to the BLM. The BLM land is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence posted with signs warning of the dangers associated with unexploded ordnance. The site is in close proximity to a residential neighborhood (Fitch Park) on the former Fort Ord. In 2001, an incident of persons trespassing withinthe MRA adjacent to Site OE-16 was reported. In addition, five incidents of trespassing into the MRA adjacent to Site OE-16 occurred within the last three years. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The land that includes Site OE-16 will be transferred to the BLM and will remain undeveloped as habitat reserve. The HMP for former Fort Ord presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.An Interim Action Record of Decision addressing OE at EPA OU-10 was signed in September 2002.The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acres was burned. The Army is studying the October 2003 burn to understand both what went right and what went wrong. Ordnance has been cleared from the surface of the entire burned area and subsurface clearance is ongoing. The next prescribed burn is scheduled to take place in 2005.OU-10 Track 2 Sites:Track 2 sites are sites where munitions and explosives of concern were found and a removal action was conducted to clean it up. The first of several Track 2 RI/FS reports is due to be issued in 2005 for the area of Fort Ord known as Parker Flats.EPA OU-11: OE Track 3Track 3 sites are sites where munitions and explosives of concern are known to be present but no cleanup has been conducted yet. The final Track 3 ROD is expected to be completed by 2007, with UXO cleanup work continuing for at least 10 years thereafter.EPA OU-12: Carbon Tetrachloride PlumeThe Army has initiated a remedial investigation/feasibility study of another area of groundwater contamination, the so-called "carbon tetrachloride plume operable unit", near the City of Marina. Contaminants slightly above regulatory standards have been found in offsite groundwater. This area of contamination is not being used for drinking water. Potential source areas are also being investigated. A soil vapor sampling and extraction system pilot study was conducted in 2004 to address the vadose zone above the carbon tetrachloride plume area. The pilot study was very successful and appears to have removed significant mass from the vadose zone. The Army expects to complete the draft Remedial Investigation/Feasibility Study Report for the carbon tetrachloride plume operable unit in 2005.OU 9:A list of the 21 Track 1 sites for which No Further Action Related to MEC is required is comprised of:MRS-1-Flame Thrower Range: The site is 25 acres in size, and is located in the northwestern part of former Fort Ord. MRS-1 is currently occupied by housing. Proposed reuse plans include residential development. Based on the literature review and sampling, the site appears to have been used for camouflage training, mine and booby trap training, non-firing mortar training, and flame thrower training. Most of this area has been used for military housing for over 40 years.MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housing. The site is currently undeveloped with proposed reuse plans to include development with reserve areas or development with restrictions. Review of training maps, aerial photographs, and other Fort Ord maps indicate mine and booby trap training occurred at the site. The adjacent areas have been used as a school and military housing for over 40 years.MRS-13A-Practice Mortar Range: The site is 61 acres in size, and is located in the northern portion of the former Fort Ord. Proposed reuse plans for MRS-13A include residential development and a park. The majority of the site has contained residential housing for nearly 30 years. The area was extensively graded in the 1970s and housing was built on portions of the site. The western portion of the site was used as a landfill in the 1960s. All landfill material in the western portion of MRS-13A was excavated (removed) and transported tothe main landfill south of Immix Road in the 1990s. Several munitions debris items and three unexploded ordnance (UXO) items were identified within and adjacent to MRS-13A during landfill excavation and housing development grading activities and were removed: three live ground signals and loose pyrotechnic material; three inert hand grenade primer detonators; two inert 40mm signal cartridges; an inert fin assembly for a 3.5-inch rocket; a live rifle grenade; miscellaneous projectiles; and two inert 3.5-inch rocket motors.MRS-20-Recoilless Rifle Training Range: The site is 7 acres in size, and is located in the southwestern portion of the Main Garrison near residential housing and Highway 1. This site is currently open space with

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

proposed reuse plans, which include development. The site was identified as a potential Recoilless Rifle Training Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in some cases, could be fired by either method.MRS-22 (Site 3)-Beach Trainfire Ranges: The site is 952 acres in size, and is located on the Monterey Baycoastline along the western margin of former Fort Ord as shown on Plate 2. The site is currently open space with the proposed reuse of the site to include a State park with open space and recreational areas. Training maps, aerial photographs, and interviews indicate the site was used as the Beach Trainfire Ranges from 1940s until base closure in 1994. The ranges contained 17 small arms firing ranges; an obstacle course; a bivouac area; a rifle instruction circle; a bayonet assault course; chemical, biological, and radiological (CBR) training areas; target detection training areas; an infiltration course; and a former ammunition supply point. CBR training at MRS-22 (Site 3) only involved training troops in the identification of targets while wearing gas masks, and did not involve the use of chemical, biological or radiological materials. Training at the Beach Trainfire Ranges reportedly also included occasional practice mortar use with inert training devices, amphibious assault landings, and battle demonstrations.MRS-24B-Practice Hand Grenade Range: The site is 14.2 acres in size, and is located in the west-central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the Impact Area. MRS-24B will continue to be used for military housing. Historical and sampling information indicate the site was used as practice hand grenade range in the 1940s.MRS-24D-Booby Traps: The site is 1.8 acres in size, and is located in the west central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as a "Booby Traps" and squad patrol training area based on review of a 1946 historical map; however, the site boundary was northwest of the area shown as "Booby Traps" on 1945 and 1946 training maps.MRS-24E-Practice Rifle Grenade Range: The site is 2.7 acres in size, and is located in the west central portion of former Fort Ord. The site is also located south of the Main Garrison and just north of the former Impact Area within a military housing complex. MRS-24E will continue to be used for military housing. MRS-24E was identified as a Practice Rifle Grenade Range on 1945/1946 training maps, but no evidence of this use was discovered during sampling at the site.MRS-27X-Training Site 24: The site is 79.5 acres in size, and is undeveloped open space located in the southeastern portion of former Fort Ord. MRS-27X is currently a habitat reserve area managed by the Bureau of Land Management (BLM), and is open to the public for recreational use. Based on review of Fort Ord training maps, the site was used as a troop training and maneuver area from the 1950s to 1970s, and as an overnight bivouac area and medical training area in the 1980s.MRS-27Y-Training Site 25: The site is 25 acres in size,and is mainly undeveloped open space located in the eastern portion of former Fort Ord along Inter-Garrison Road. A small portion of the site also lies on property that was transferred to California State University Monterey Bay in 1995 for development. The site was identified as one of 26 training sites within Fort Ord Training and Maneuver Areas used as troop training, maneuver, and overnight bivouac areas.MRS-32A-Oil Well Road Training Area: The site is 38 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as atank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and as a troop training and

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

maneuver area from 1950s to 1980s.MRS-32B-Oil Well Road Training Area II: The site is 47 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32B include maintaining the land as habitat reserve. Based on historical training maps (circa 1954 and 1956), it was identified as the "Oil Well Road Training Area"; a portion of the site was reportedly used as a Tank Gunnery Range in 1950s; and the site may also have been used for firing of shoulder-launched projectiles.MRS-39-Mine and Booby Trap Area: The site is 12.1 acres in size, and is located east of General Jim Moore Boulevard and south of Gigling Road in the Marshall Park housing area. MRS-39 will continue to be used for military housing. The site was identified as a Mine and Booby Trap Training Area on 1957/1958 maps.MRS-49-Former Rifle Grenade Range: The site is 28 acres in size, and is located in the west central portion of former Fort Ord, south of Main Garrison and just north of military housing. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a training area and rifle grenade range in the 1940s and 1950s based on interviews conducted during the Preliminary Assessment/Site Inspection (PA/SI) phase of the Fort Ord Archive Search.MRS-59A-Unnamed: The site is 41 acres in size, and is located in the eastern portion of former Fort Ord near the East Garrison and MRS-5. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a possible 2.36-inch rocket range during interviews conducted during the PA/SI phase of the Fort Ord Archive Search. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps.MRS-62-Laguna Seca Open Space: The site is 247 acres in size, and is located at the southern end of former Fort Ord. The site is currently open space andproposed reuse plans include development. The site was identified as a small arms and flare training area during an interview with a former Fort Ord Fire Chief conducted during the PA/SI phase of Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, the site was used as a troop training and maneuver area from the late 1940s through 1980s; and the southern half of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-62 lies within a larger area identified during interviews conducted as part of the Archives Search as "Area T" and was a described as a general area where training may have occurred. The boundary of MRS-62 is based on transfer parcel delineation and not on evidence of munitions use. The boundary of MRS-62 was established to correspond to with disposal Parcel L20.6. Although the size of the parcel to be transferred has changed over time, the boundary of MRS-62 corresponds with the current boundary of Parcel L20.6.MRS-63-Canyon Training Area: The site is 28 acres in size, and is located at the southern end of former Fort Ord east of MRS-62. MRS-63 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as a small arms and flare training area during the PA/SI phase of the Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, most of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators.MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majority of the site lies on property transferred to California State University Monterey Bay (CSUMB) that is currently used for student housing or is proposed for development. A small portion of the site lies on property that is designated as habitat reserve. The site was identified as a reported signal corps field training area during the PA/SI phase of Fort Ord Archive Search, and other uses included aviation

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

training, basic unit training, and a bivouac area from 1950s until housing construction in 1989.MRS-69-Unnamed: The site is 37 acres in size, and is undeveloped open space located on the eastern side of former Fort Ord. MRS-69 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as an area of possible rifle grenade use based on interviews with a former Fort Ord Fire Chief. This site is within land transferred to the BLM and is open to the public for hiking, biking, and horseback riding. Use is limited to marked trails. The public has had access to this area for approximately 6 years.MRS-70-Unnamed: The site is 14 acres in size, and is located on the southeastern side of former Fort Ord, south of Oil Well Road. The site is currently a habitat reserve area managed by BLM, and is open to the public for recreational use. The area encompassing MRS-70 was identified as containing firing berms based on interviews with a former Fort Ord Fire Chief.A ROD addressing OU 9 was completed in April 2005.Operable Unit 2:The Fort Ord Landfills area was designated as Operable Unit 2 (OU2) when a remedial investigation identified the presence of volatile organic compounds (VOCs) associated with landfilled materials in groundwater beneath the site. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated groundwater and ongoing remediation of groundwater associated with OU2 is being conducted in accordance with the OU2 Record of Decision (ROD) and the Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD).In accordance with the OU2 ROD and the Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills, the Army completed removal and consolidation of refuse from the north landfill into the main landfill in October 1998 and installation of an engineered cover system for the main landfill in December 2002 as part of the closure process for the Fort Ord Landfills.At the Fort Ord Landfills, the perimeter fence line was initially designated as the boundary for landfill gas (LFG) compliance monitoring in accordance with applicable or relevant and appropriate requirements (ARARS) and LFG monitoring probes were installed inside the fence line. Monitoring of these probes commenced in June 2000. Fixed-based laboratory results and field measurements showed methane concentration exceeding the 5% regulatory standard in most probes. The Army performed an additional investigation in August 2000 and sampling results showed that methane was detectable extending out about 70 feet front the fence line on the east side of Area F. All probes were monitored again in September and December 2000, with the results again showing methane concentrations exceeding the 5% standard. In response the Army installed additional probes at locations around the outer parts of the OU2 property beyond the fence line in April and May 2001. Analytical results for these probes indicated that methane concentrations at the property boundary were less than the 5% standard, with the exception of the east side of Area F.The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volatile organic compounds (VOCs) in air between the Fort Ord Landfills and the nearest housing. These data were used to complete a screening levelhuman health risk assessment (HHRA) for nearby residences. The HHRA was updated after each monitoring event and attached as an appendix to each ambient air monitoring report. The HHRA concluded that there is a health risk for long-term exposure to VOCs in ambient air; however, the Army determined the data evaluated in the HHRA were limited and additional monitoring would be appropriate. Additional ambient air monitoring was conducted on a quarterly basis in 2003 and the HHRA updated to include these data and evaluate specifically landfill-related risk. The updated HHRA indicated the Fort Ord Landfills are not a significant contributor of VOCs

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

in ambient air or risk to downwind receptors.The following remedies for the Fort Ord Landfills were selected in the OU2 ROD:- A cover system to (1) prevent rainwater from percolating through the landfilled areas into the underlying aquifers; (2) collect and remove methane offgas (if necessary); and (3) prevent exposure of sanitary waste in the landfills to the surrounding environment.- Institutional controls (i.e., deed restrictions) to be placed on the property to ensure that the integrity of the cover system is maintained and prevent potential direct exposures of VOCs to the environment or people associated with future use of the site.- Institutional controls (i.e., deed restrictions) that prevent the use of groundwater within the contaminant plume.- Groundwater extraction and treatment, to be monitored on a regular basis and adjusted as warranted by the performance data collected during operation. Additionally, treated groundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface.Three previous ESDsto the OU2 ROD have been completed:- Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD). The OU2 ESD finalized the cleanup standard for the Upper 180-foot Aquifer to be consistent with those of the A-aquifer to facilitate the coordinated cleanup strategy for both aquifers. - Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills (Area A ESD). The Area A ESD addressed excavation and consolidation of refuse from the north landfill (Area A) into the main landfill (Areas B through F).- Explanation of Significant Differences, Consolidation of Remediation Waste in a Corrective Action Management Unit, Operable Unit 2, Fort Ord Landfills (CAMU ESD). The CAMU ESD addressed using remediation waste as foundation layer material instead of "clean" (uncontaminated) soil as described in the OU2 ROD.An additional ESD addressing OU2 was completed in October of 2006.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Delof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms tarsives. Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented informer Fort Ord subject to the provisions of the Fort Ord FFA. EPA OU-01: Fritzsche Army Airfield Fire Drill Area An investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wter treatment system is complete and is operational. In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will provide more clean land for re-use. The changes are documented in the Explanation of Signd grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, p in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well. EPA OU-08: OE Track 0 (No Further Action)the process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will contite 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are kned at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitanA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), an OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site wd of Decision addressing OE at EPA OU-10 was signed in September 2002. Operable Unit 10: MRS-3 Based on the MRS-3 sampling results, a MEC removal to four feet bgs was recommended per the Final Phase I Engineering Evaluation/Cost Analysis (Phase I E MEC items were removed. In addition, 293 items were removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Most of the items found at MRS-4B were consistent with the reportt MRS-13B at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from burial pits included grenade and mine fuzes, firing devices, pyrotechnics (signal, illumination and smoke), rockets, rifle and hand smoke grenades, blasting caps,items found within MRS-27G were generally of the types associated with overnight bivouac training sites and general maneuver areas. Within MRS-27G's boundaries a small number of 75 millimeter (mm) and 37mm items were removed, inspected and determinedemoval to four feet bgs. This MRS was subsequently subdivided into 240 100- X 100-foot removal grids. An investigation for MEC was conducted using the Schonstedt Model GA-52/Cx magnetometer, with all detected MEC removed. 50 MEC items were removed. Iere removed. In addition, 149 pounds of debris was removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Of the 26 MEC items recovered, 2 munitions (a MK I 75mm Shrapnel prtems were non-penetrating (e.g., pyrotechnics, grenades, and grenade and projectile fuzes) munitions. The penetrating military munitions found included projectiles, rifle grenades, and rockets. Both DMM and MD were found in numerous burial pits thatated all detected anomalies at 52 100- X 100-foot grids using a Schonstedt Model GA-52/Cx magnetometer. During this investigation, 19 MEC items were removed. In addition, 453 pounds of debris was removed, inspected and determined not to pose an exploal pits were discovered during the removal conducted at MRS-53. Both DMM and MD were found in burial pits at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from these pits included fuzes (grenade, mine, time, and projectile), sich 1998, 23 100- X 200-foot grids were identified at MRS-55. Subsequently, 19 of these grids were surveyed using a Schonstedt Model GA-52/Cx magnetometer with a maximum search lane width of 5 feet. Following the survey, anomalies were selected for in). Other sources of future land use information include public benefit conveyance, negotiated sale requests, transfer documents, and the Installation-Wide Multispecies Habitat Management Plan for Former Fort Ord, California. The Reuse Plan identifiedin ground disturbing activities (e.g., during construction/excavation). A ROD addressing Operable Unit 10 was completed in August 2008. The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acresm Action in the Record of Decision, Interim Action for Ordnance and Explosives at Ranges 43-48, Range 30.A, and Site OE-16, Former Fort Ord, California (Interim Action ROD; .Army, 2002), and the implementation of MEC remediation under the Interim Acton tetrachloride (CT) detected in three different aquifers up to 550 feet below ground surface (bgs). No records exist to indicate exactly when, how often, or how much CT may have been used, stored, or disposed of; however, by delineating

the areas od by the Marina Coast Water District (MCWD) and is pumped from wells that are located east of the OUCTP area screened in the Lower 180-Foot Aquifer. Based on groundwater monitoring data and data provided by the MCWD, these drinking water wells have nnd flame thrower training. Most of this area has been used for military housing for over 40 years. MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housTraining Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in soesidential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as aBooby Traps and squad patrol training area based on revied reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as a tank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and a. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps. MRS-62-L78 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majoritsite. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated grounof Area F. The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volroundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface. Three previous ESDs to the OU2 ROD have been completed: - Explanation of Significant Differences, Operable Unit 2, Fort O

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste name: TETRACHLOROETHYLENE

Corrective Action Summary:

Event date: 04/01/1986
Event: CA049PA

Event date: 04/01/1986
Event: CA029SF

Event date: 06/01/1987
Event: CA049SI

Event date: 01/01/1988
Event: Stabilization Measures Implemented, Groundwater extraction and treatment (e.g., to achieve groundwater containment, to achieve MCL).

Event date: 12/01/1988
Event: Stabilization Construction Completed

Event date: 07/23/1990
Event: RFI Imposition

Event date: 07/23/1990
Event: CMS Imposition

Event date: 12/01/1991
Event: CMS Workplan Approved

Event date: 12/01/1991
Event: RFI Workplan Approved

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

Event date: 01/17/1995
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 01/01/1996
Event: CA Responsibility Referred To A Non-RCRA Federal Authority, Corrective Action at the facility or area referred to CERCLA.

Event date: 08/08/1996
Event: RFA Completed, Assessment was an RFA.

Event date: 01/13/1997
Event: CMS Approved

Event date: 01/13/1997
Event: Date For Remedy Selection (CM Imposed)

Event date: 01/13/1997
Event: RFI Approved

Event date: 04/08/1998
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 04/08/1998
Event: CA Responsibility Referred To A Non-RCRA Federal Authority

Event date: 04/08/1998
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 04/08/1998
Event: Current Human Exposures under Control, Current human exposures are NOT under control.

Event date: 05/22/2000
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 05/22/2000
Event: Current Human Exposures under Control, Current human exposures are NOT under control.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

STORELLI BROS AUTO BODY & GLASS (Continued) **1000355692**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include;

Hazardous Waste Summary:

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D005
Waste name: BARIUM

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D009
Waste name: MERCURY

Map ID	Site	Database(s)	EPA ID Number

DISASTER KLEENUP SPECIALISTS MONTERAY BA (Continued) **1011488245**

TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED FLUOROCARBONS; ALL SPENT SOLVENT MIXTURES/BLENDS USED IN DEGREASING CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F002
Waste name: THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROBENZENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2-TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE LISTED IN F001, F004, OR F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F003
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NON-HALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS, AND, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THOSE SOLVENTS LISTED IN F001, F002, F004, AND F005, AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F004
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: CRESOLS AND CRESYLIC ACID, AND NITROBENZENE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F005
Waste name: THE FOLLOWING SPENT NON-HALOGENATED SOLVENTS: TOLUENE, METHYL ETHYL KETONE, CARBON DISULFIDE, ISOBUTANOL, PYRIDINE, BENZENE, 2-ETHOXYETHANOL, AND 2-NITROPROPANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE NON-HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F002, OR F004; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

Waste code: F006
Waste name: WASTEWATER TREATMENT SLUDGES FROM ELECTROPLATING OPERATIONS EXCEPT FROM THE FOLLOWING PROCESSES: (1) SULFURIC ACID ANODIZING OF ALUMINUM; (2) TIN PLATING ON CARBON STEEL; (3) ZINC PLATING (SEGREGATED BASIS) ON CARBON STEEL; (4) ALUMINUM OR ZINC-ALUMINUM PLATING ON CARBON STEEL; (5) CLEANING/STRIPPING ASSOCIATED WITH TIN, ZINC AND ALUMINUM PLATING ON CARBON STEEL; AND (6) CHEMICAL ETCHING AND MILLING OF ALUMINUM.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Summary Details:

Conditions at proposal July 14, 1989): Fort Ord covers 46 square miles on Monterey Bay approximately 5.6 miles north of Monterey, Monterey County, California. The installation is bordered by the City of Marina and the Salinas River to the north, El Toro Creek to the east, Seaside and Del Rey Oaks to the south, and Monterey Bay to the west. Fort Ord was established in 1917 as a maneuver area and field artillery target range for units then stationed at the Presidio of Monterey. Its primary mission now is training. Industrial operations at Fort Ord include vehicle maintenance areas, a battery charging/repair facility, photographic processing laboratories, spray painting operations, a plastics shop, laundry/dry cleaning facilities, vehicle wash racks, and a small arms repair shop. Chemicals and ha ardous wastes were managed and disposed of at Fort Ord. According to tests conducted by the Army in 1986, elevated levels of contaminants were detected in off-base ground water. The contamination is emanating from the base and may be contaminating the drinking water supplies of the City of Marina; however, the exact location of the source has not yet been identified. The contaminants includecarbon tetrachloride, tetrachloroethylene, trichloroethylene, 1,1,1-trichloroethane, and trans-1,2-dichloroethylene. An estimated 38,600 people obtain drinking water from wells within 3 miles of ha ardous substances on the fort. Ground water is also used for irrigation. In addition, soil and ground water are contaminated at the Fire Drill Area, where approximately 600 gallons of petroleum products have been spilled. Fort Ord has identified at least 18 other contamination problems.Fort Ord is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part of IRP, theArmy is implementing a sampling plan to investigate ground water contamination. The Army is treating contaminated soil and ground water at nearby Frit sche Army Airfield Fire Drill Area. Status February 21, 1990): IRP activities continue.

Site Description: The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. Environmental investigations began at Fort Ord in 1984 under the Regional Water Quality Control Board (RWQCB) cleanup or abatement orders. In 1986, further investigations began at Operable Unit 2 (OU2). In 1990, Fort Ord was placed on the National Priorities List (NPL) because of Volatile Organic Compounds (VOCs) found in ground water beneath OU2. A Federal Facility Agreement (FFA) was signed in 1990 by the Army, U.S. Environmental Protection Agency, the California Environmental Protection Agency's Department of Toxic Substances Control (DSTC)

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and Regional Water Quality control Board (RWQCB). The FFA established schedules for commencing Remedial Investigations and Feasibility Studies (RI/FS). In 1991, the basewide RI/FS began and Fort Ord was placed on the Base Realignment and Closure list. The final FS for OU2 was completed on October 1, 1993, and the Record of Decision (ROD) was signed in August 1994. An Interim Action Plug-In ROD was signed in March 1994 for excavation and treatment of shallow contaminated soils. The Draft and Draft Final Versions of the Basewide RI/FS were completed in August 1994 and December 1994, respectively.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Del Rey Oaks to the south and Marina to the north. The Southern Pacific Railroad and Highway 1 pass through the western portion of former Fort Ord, separating the beachfront from the rest of the base. Laguna Seca Recreation Area and Toro Regional Park border former Fort Ord to the south and southeast, respectively, as well as several small communities such as Toro Park Estates and San Benancio.There are three main developed areas within Fort Ord: the Main Garrison, the East Garrison and Fritzsche Army Airfield (FAAF). The Main Garrison contains commercial, residential, and light industrial facilities. The East Garrison occupies 350 acres on the northeastern edge of the base and consists of military and industrial support areas, recreationalfacilities, and recreational open space. The FAAF serves as the general airfield for Fort Ord. EPA placed the site on the National Priorities List in 1990. Several areas of contamination exist on site. Generally, chemicals present in soil are the result of former routine maintenance and support activities on Fort Ord. Such activities include: maintenance of military vehicles at wash racks, tank storage of chemicals such as waste oil, the use of oil/water separators in drainage areas, and pesticide use and storage. The facility contained leaking petroleum underground storage tanks, containers of waste oil and various automotive chemicals, chemical storage areas, oil-waste separators, target ranges, and landfills. One on-site area is a 150-acre landfill that was primarily used to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Recordof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms target ranges. Over 12,000 acres are suspected of containing ordnance and explosives (OE). In particular, the 8,000 acre Multi-Range Area (MRA) is known to contain dangerous unexploded ordnance. OE investigations are complicated by technological limitations and protected habitat that covers the area and requires special management pursuant to the base Habitat Management Plan (HMP). This includes the current requirement to use prescribed burns to clear vegetation prior to OE removal. The HMP currently restricts burns to 800 acres/year, thus requiring at least 10 years to address OE in the MRA.The aquifers at the site are called the upper aquifer and the 180-foot aquifer. Approximately 40,000 people obtain drinking water from wells located within 3 miles of the site.Since opening in 1917, Fort Ord served as a training and staging facility for Army infantry troops. No permanent improvements were made until the late 1930s when administrative buildings, barracks, mess halls, tent pads, and a sewage treatment plant were constructed. The Main Garrison was constructed between 1940 and the 1960s, starting in the northwest corner of the base and expanding southeastward. The FAAF was incorporated into Fort Ord in 1961. Since 1917, portions of the Installation were used by infantry units for maneuvers, target ranges, and other purposes. Ordnance and explosives (OE) that have been fired into, fired upon, or used on the facility include artillery and mortar projectiles, rockets

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and guided missiles, rifle and hand grenades, practice land mines, pyrotechnics, bombs, and demolition materials. A wide variety of conventional OE items have been located at sites throughout the former Fort Ord, including pyrotechnics and explosives.Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented in preparation for transfer and reuse of former Fort Ord property. The Ord Military Community, located within the Main Garrison portion of former Fort Ord, will be retained by the Army. Since base closure in September 1994, lands outside the Ord Military Community have been subjected to the reuse process. Some of the property on the installation has been transferred. A large portion of the Inland Training Ranges was assigned to the Bureau of Land Management (BLM). The other major recipient of Fort Ord property has been the California State University (CSU) system. The CSU Monterey campus is located on the site of the former Fort Ord and is expected to expand in the future. Other areas on the installation have been or will be transferred to federal, state, local, and private entities through economic development conveyance, public benefit conveyance, negotiated sale, or other means.The reuse of the former Fort Ord following transfer of property increases the possibility of the public beingexposed to explosive hazards. In November 1998, the Army agreed to evaluate OE at former Fort Ord in an OE Remedial Investigation/Feasibility Study (RI/FS) consistent with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). A Federal Facility Agreement (FFA) was signed in 1990 by the Army, EPA, and the California Environmental Protection Agency's Department of Toxic Substances control (DTSC; formerly the Department of Health Services or DHS). The FFA established schedules for performing remedial investigations and feasibility studies and requires that remedial actions be completed as expeditiously as possible. In April 2000, an agreement was signed between the Army, EPA and DTSC to evaluate OE at theformer Fort Ord subject to the provisions of the Fort Ord FFA.EPA OU-01: Fritzsche Army Airfield Fire Drill AreaAn investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wassigned in September 1995. Groundwater cleanup standards were established in the ROD which must be met through the existing pump and treat system. The selected remedy is consistent with the initial action described above. The groundwater treatment system was installed in 1988. In 2004, the Army awarded a fixed price contract for the management and completion of the groundwater cleanup remedy at Operable Unit 1.EPA OU-02: Fort Ord LandfillOne on-site area is a 150-acre landfill that was primarilyused to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Record of Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed.The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. In 1994, the Army completed an investigation focusing on groundwater andsoil contamination originating from the landfill. A Record of Decision (ROD) was signed in August 1994. The ROD included capping the landfill and installing a groundwater pump and treatment system. Construction of the groundwater treatment system is complete and is operational.In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

provide more clean land for re-use. The changes are documented in the Explanation of Significant Differences (ESD) in August 1996.The consolidation is complete and capping of the main landfill was completed in December 2002. The Army has installed an active landfill gas extraction and treatment system to capture and remediate methane andother volatile organic compound gases that are being generated by decaying materials in the landfill. The Army continues to monitor landfill gases to ensure that do not pose a health hazardEPA OU-03: Overall SiteIn 1990, the Army began further investigations into the nature and extent of on- and off-site soil and groundwater contamination, as well as any ecological or health threats that may be present. The investigation identified three waste disposal sites, firing ranges, and a vehicle maintenance area that require extensive cleanup actions. The Army completed the RI/FS and ROD in 1997, and all soil cleanup actions are complete, and groundwater pump and treatment systems are operational. The action included remediating the Sites 2/12 maintenance/disposal area by soil excavation and ongoing groundwater remediation, Sites 16/17 disposal area by soil excavation, Site 31 disposal area by soil excavation, and Site 39 small arms ranges by soil excavation. Most of the excavated soils were placed at the Fort Ord Landfill, which was closed in December 2002. The Army is currently evaluating treatment/disposal options for additional Site 39 soils to be excavated.Site 39, which includes the Multi-Range Area (MRA), was reportedly used sincethe early 1900s for small arms training and ordnance training exercises, including onshore naval gunfire. Over the years, in addition to small arms rounds, various types of ordnance have been used or found in the MRA, including hand grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, petroleum hydrocarbons, and other metals associated with training activities. Ordnance is being addressed through other remedial or removal actions.Site 39 comprises approximately 8,500 acres in the southern portion of Fort Ord. Site 39 is bounded byEucalyptus Road to the north, Barloy Canyon Road to the east, Boundary Road and South Boundary Road to the south, and General Jim Moore Blvd to the west.Results of the RI indicate the metals lead and beryllium, explosive compounds, and organic compounds are present in shallow soil above background concentrations in localized areas at Site 39, and are associated with past military training activities.Spent ammunition found at the Small Arms Ranges consists of bullets, black powder rifle balls, and lead shot. Lead is the primary chemical of concern in soil at the Small Arms Ranges at Site 39. In localized areas, spent ammunition is found on the ground surface.An Explanation of Significant Differences addressing OU 3 was completed in December2003.EPA OU-04: Surface SoilsEPA OU-05: No Action SoilsEPA OU-07: Site 3 Beach RangeSite 3 is situated within about 3.2 miles (780 acres) of dunes along the coastline of Monterey Bay at the western boundary of Fort Ord. Results of the investigation indicate lead from small arms is the main contaminant at the site. The site is also home of the Smith's Blue butterfly, an endangered species, and buckwheat plants which the butterflies use to lay their eggs on. In 1997, the Army completed a ROD allowing them to first clean up the lead contamination to address human health concerns by soil excavation and placement in the Fort Ord Landfill, which was simultaneously being remediated (capped). This cleanup was completed in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well.EPA OU-08: OE Track 0 (No Further Action)The Track 0 process addresses single or grouped areas of land at the former Fort Ord that have no history of OE-related use and for which No Action is necessary to protect human health and the environment. These areas consist largely of land that has been developed for military support or residential use throughout Fort Ord's history and areas

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

that have no physical or documented evidence of OE-related training. A Track 0 Special Case area includes a former landfill where OE scrap items were found buried with refuse. No OE-related activities occurred in the area and the OE scrap items and the refuse were entirely removed.Track 0 areas were grouped geographically: e.g., all non-OE land in the Main Garrison was grouped and discussed together as one area. Track 0 includes parcels in the following areas:- Highway 1 Area- Golf Course Maintenance Area- Brostrom Park Area- Patton/Abrams Park Housing Area- Open Space, Main Entrance Area- Surplus II Area- Fritzsche Army Airfield Area- East Garrison Area- Main Garrison Area- OU 2 Landfill Area- Reservation Road AreaTrack 0 sites were addressed by a No Further Action Record of Decision (ROD) dated July 2, 2002.The Army has been conducting military munitions sampling and removal actions at identified Munitions Response Sites (MRS) and will continue these actions to mitigate imminent MEC-related hazards to the public while gathering data about the type of military munitions and level of hazard at each of the sites for use in the base-wide MR RI/FS. The Army is performing its activities pursuant to the President's authority under the CERCLA Section 104, as delegated to the Army in accordance with Executive Order 12580 and in compliance withthe process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will continue to be involved. The Army is preparing the MR RI/FS for Fort Ord to address MEC-related hazards. The MR RI/FS will review and evaluate past investigative and removal actions, as well as recommend future response actions deemed necessary to protect human health and the environment on the basis of proposed reuses specified in the Fort Ord Reuse Authority (FORA) Reuse Plan.The information to be evaluated during the MR RI/FS will include site knowledge, the quality of the available information,work completed, and intended future land uses. The base-wide MR RI/FS will contain a comprehensive evaluation of all MEC-related data for the entire former Fort Ord and will evaluate long-term response alternatives for cleanup and risk management ofMEC.The MR RI/FS is organized as a "tracking" process whereby sites with similar characteristics will be grouped to expedite cleanup, reuse, and/or transfer based on current knowledge. The Track 0 Record of Decision (ROD) addresses areas on the former Fort Ord that have been identified as requiring no munitions response to protect human health (public safety) and the environment (Track 0 areas). Other Track (1 through 3) areas will be addressed separately for the other lands that have or are suspected to have a history of military munitions-related use and investigations completed to date. Track 1 sites were suspected to have been used for training with military munitions but for which no further response action is required because they fall into one of the three categories defined in Record of Decision, No Further Action Related to Munitions and Explosives of Concern-Track 1 Sites; No Further Remedial Action with Monitoring for Ecological Risks from Chemical Contamination at Site 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are known or suspected to be present, but MEC investigations have not yet been completed.All base-wide MR RI/FS documents have been or will be prepared in cooperation with the EPA and DTSC in accordance with the Fort Ord FFA; made available for public review and comment; and placed in the Administrative Record and local information repositories.A ROD addressing OU 8 was completed in 2002. An Explanation of Significant Difference (ESD) pertaining to the OU8 ROD was completed in April of 2005.EPA OU-09: OE Track 1Track 1 sites are sites where munitions and explosives of concern were suspected but no further remedial action was deemed necessary to protect human health and the environment. The Track 1 Proposed Plan was issued for public comment on September 15, 2004 and

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the ROD is scheduled to be signed in 2005.EPA OU-10: OE at Ranges 43-48, Range 30A, and Site OE-16Ranges 43-48 cover approximately 498 acres to the south of Eucalyptus Road in the south-central portion of the former Fort Ord. The majority of the site is designated as habitat reserve and will remain undeveloped (473 acres), and a limited portion of the site (25 acres) will be developed and reused.These ranges were part of the former Fort Ord's Multi-Range Area (MRA) and are categorized as firing ranges where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Ranges 43-48 mainly consists of central maritime chaparral (CMC)with some grassland areas.Training facilities maps indicate these ranges were used for a variety of live fire exercises from the 1940s through the 1990s. Records and recent field investigations indicate the ammunition used at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitank weapon (LAW); small arms; practice anti-personnel mines; dragon guided missiles; practice claymore mines; and fragmentation hand grenades.The former firing ranges contain sensitively fuzed, highly dangerous OE present on the ground surface or at shallow depths below the ground. As described above, numerous types of OE ranging from hand grenades to 90mm recoilless rifle rounds are known or suspected to be on the site. During recent limited surface removals in 2001, thousands of OE items were recovered at Ranges 43-48.This Interim Action site is adjacent to (less than 4,000 feet from) residential neighborhoods at Ord Military Community (Fitch and Marshall Parks) and is near the City of Seaside. The Fitch and Martin Luther King Jr. Middle Schools are located less than a mile from Ranges 43-48. Existing site security measures include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In the last three years, five documented incidents of persons trespassing into the Ranges 43-48 site occurred. In 1999, there were two documented cases of children entering the fenced MRA at Ranges44 and 45, and collecting and removing 40mm practice grenades found on the ground surface. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The majority of this Interim Action site is designated as habitat reserve and will remain undeveloped. Future reuse of Transfer Parcel E21b.3 is development.Range 30A includes approximately 388 acres located in the southeastern portion of the MRA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerFort Ord MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Range 30A mainly consists of CMC with somegrassland areas.Range 30A was constructed in 1990 as a 40mm machine gun range and was in use until 1993. According to the Fort Ord Training Ranges Standard Operating Procedure (SOP), the only weapon authorized for use at Range 30A from 1991 and 1992was the MK19 40mm machine gun, Mod 3. Ammunition authorized for use at Range 30A included HE, high explosive dual purpose (HEDP) and target practice (TP).Range 30A is known to contain sensitively fuzed, highly dangerous 40mm grenades and evidence of60mm and 81mm mortars and 37mm, 75mm, 155mm, and 8-inch projectiles. Limited surface removals in 2001 in the accessible areas of Range 30A have recovered hundreds of whole or partial OE and OE scrap items.The Range 30A Interim Action site is locatedin close proximity (approximately 2,200 feet north) to the Laguna Seca residential area and Laguna Seca Golf Course, and less than a mile from the Laguna Seca Raceway.

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

South Boundary Road, located approximately 2,000 feet to the south, is open to vehicular traffic during events at Laguna Seca Raceway and is always open to the public for jogging, hiking, and biking. This range was part of the former Fort Ord's MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Existing access deterrents include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), and three other incidents of fence damage were reported within 4,000 feet of the range (near Range 29). Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.As part of the closure of the former Fort Ord, the MRA will be transferred to the BLM and most of the MRA will remain undeveloped as habitat reserve. The habitat management plan (HMP) presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.Site OE-16 includes approximately 80 acres located immediately north of the former Fort Ord MRA, between Eucalyptus and Parker Flats roads and bounded by Watkins Gate Road to the east (Plate 5). This site will become habitat reserve and will remain undeveloped. The Bureau of Land Management (BLM) land (immediately adjacent) is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence. The site is posted with signs warning of the dangers associated with unexploded ordnance. Vegetation at Site OE-16 mainly consists of CMC with some grassland areas.Site OE-16 is a World War II (WWII) era rocket range, and is identified as a "bazooka practice" area on Fort Ord Training Facilities maps dating from 1945 and 1946. Available training maps after 1946 do not identify the bazooka practice area. According to Fort Ord Range Control, this range was probably used as an antitank rocket range during and shortly after WWII. Available information indicates that Site OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site was later used for a portion of time as an anti-armor training area. Evidence from the site indicates that both practice and HEAT rounds were used.Site OE-16 contains sensitively fuzed, highly dangerous OE, such as HEAT projectiles, present on the ground surface or at shallow depths below the ground. During recent limited surface removals in 2001, hundreds of OE items, including expended and live 2.36-inch rockets (practice and HEAT), practice antitank mines, rifle grenades, hand grenade fuzes, and OE scrap were recovered.Site OE-16 is located adjacent to the MRA and land that has been transferred to the BLM. The BLM land is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence posted with signs warning of the dangers associated with unexploded ordnance. The site is in close proximity to a residential neighborhood (Fitch Park) on the former Fort Ord. In 2001, an incident of persons trespassing withinthe MRA adjacent to Site OE-16 was reported. In addition, five incidents of trespassing into the MRA adjacent to Site OE-16 occurred within the last three years. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The land that includes Site OE-16 will be transferred to the BLM and will remain undeveloped as habitat reserve. The HMP for former Fort Ord presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.An Interim Action Record of Decision addressing OE at EPA OU-10 was signed in September 2002.The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acres was burned. The Army is studying the October 2003 burn to understand both what went right and what went wrong. Ordnance has been cleared from the surface of the entire burned area and subsurface clearance is ongoing. The next prescribed burn is scheduled to take place in 2005.OU-10 Track 2 Sites:Track 2 sites are sites where munitions and explosives of concern were found and a removal action was conducted to clean it up. The first of several Track 2 RI/FS reports is due to be issued in 2005 for the area of Fort Ord known as Parker Flats.EPA OU-11: OE Track 3Track 3 sites are sites where munitions and explosives of concern are known to be present but no cleanup has been conducted yet. The final Track 3 ROD is expected to be completed by 2007, with UXO cleanup work continuing for at least 10 years thereafter.EPA OU-12: Carbon Tetrachloride PlumeThe Army has initiated a remedial investigation/feasibility study of another area of groundwater contamination, the so-called "carbon tetrachloride plume operable unit", near the City of Marina. Contaminants slightly above regulatory standards have been found in offsite groundwater. This area of contamination is not being used for drinking water. Potential source areas are also being investigated. A soil vapor sampling and extraction system pilot study was conducted in 2004 to address the vadose zone above the carbon tetrachloride plume area. The pilot study was very successful and appears to have removed significant mass from the vadose zone. The Army expects to complete the draft Remedial Investigation/Feasibility Study Report for the carbon tetrachloride plume operable unit in 2005.OU 9:A list of the 21 Track 1 sites for which No Further Action Related to MEC is required is comprised of:MRS-1-Flame Thrower Range: The site is 25 acres in size, and is located in the northwestern part of former Fort Ord. MRS-1 is currently occupied by housing. Proposed reuse plans include residential development. Based on the literature review and sampling, the site appears to have been used for camouflage training, mine and booby trap training, non-firing mortar training, and flame thrower training. Most of this area has been used for military housing for over 40 years.MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housing. The site is currently undeveloped with proposed reuse plans to include development with reserve areas or development with restrictions. Review of training maps, aerial photographs, and other Fort Ord maps indicate mine and booby trap training occurred at the site. The adjacent areas have been used as a school and military housing for over 40 years.MRS-13A-Practice Mortar Range: The site is 61 acres in size, and is located in the northern portion of the former Fort Ord. Proposed reuse plans for MRS-13A include residential development and a park. The majority of the site has contained residential housing for nearly 30 years. The area was extensively graded in the 1970s and housing was built on portions of the site. The western portion of the site was used as a landfill in the 1960s. All landfill material in the western portion of MRS-13A was excavated (removed) and transported tothe main landfill south of Immix Road in the 1990s. Several munitions debris items and three unexploded ordnance (UXO) items were identified within and adjacent to MRS-13A during landfill excavation and housing development grading activities and were removed: three live ground signals and loose pyrotechnic material; three inert hand grenade primer detonators; two inert 40mm signal cartridges; an inert fin assembly for a 3.5-inch rocket; a live rifle grenade; miscellaneous projectiles; and two inert 3.5-inch rocket motors.MRS-20-Recoilless Rifle Training Range: The site is 7 acres in size, and is located in the southwestern portion of the Main Garrison near residential housing and Highway 1. This site is currently open space with

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

proposed reuse plans, which include development. The site was identified as a potential Recoilless Rifle Training Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in some cases, could be fired by either method.MRS-22 (Site 3)-Beach Trainfire Ranges: The site is 952 acres in size, and is located on the Monterey Baycoastline along the western margin of former Fort Ord as shown on Plate 2. The site is currently open space with the proposed reuse of the site to include a State park with open space and recreational areas. Training maps, aerial photographs, and interviews indicate the site was used as the Beach Trainfire Ranges from 1940s until base closure in 1994. The ranges contained 17 small arms firing ranges; an obstacle course; a bivouac area; a rifle instruction circle; a bayonet assault course; chemical, biological, and radiological (CBR) training areas; target detection training areas; an infiltration course; and a former ammunition supply point. CBR training at MRS-22 (Site 3) only involved training troops in the identification of targets while wearing gas masks, and did not involve the use of chemical, biological or radiological materials. Training at the Beach Trainfire Ranges reportedly also included occasional practice mortar use with inert training devices, amphibious assault landings, and battle demonstrations.MRS-24B-Practice Hand Grenade Range: The site is 14.2 acres in size, and is located in the west-central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the Impact Area. MRS-24B will continue to be used for military housing. Historical and sampling information indicate the site was used as practice hand grenade range in the 1940s.MRS-24D-Booby Traps: The site is 1.8 acres in size, and is located in the west central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as a "Booby Traps" and squad patrol training area based on review of a 1946 historical map; however, the site boundary was northwest of the area shown as "Booby Traps" on 1945 and 1946 training maps.MRS-24E-Practice Rifle Grenade Range: The site is 2.7 acres in size, and is located in the west central portion of former Fort Ord. The site is also located south of the Main Garrison and just north of the former Impact Area within a military housing complex. MRS-24E will continue to be used for military housing. MRS-24E was identified as a Practice Rifle Grenade Range on 1945/1946 training maps, but no evidence of this use was discovered during sampling at the site.MRS-27X-Training Site 24: The site is 79.5 acres in size, and is undeveloped open space located in the southeastern portion of former Fort Ord. MRS-27X is currently a habitat reserve area managed by the Bureau of Land Management (BLM), and is open to the public for recreational use. Based on review of Fort Ord training maps, the site was used as a troop training and maneuver area from the 1950s to 1970s, and as an overnight bivouac area and medical training area in the 1980s.MRS-27Y-Training Site 25: The site is 25 acres in size,and is mainly undeveloped open space located in the eastern portion of former Fort Ord along Inter-Garrison Road. A small portion of the site also lies on property that was transferred to California State University Monterey Bay in 1995 for development. The site was identified as one of 26 training sites within Fort Ord Training and Maneuver Areas used as troop training, maneuver, and overnight bivouac areas.MRS-32A-Oil Well Road Training Area: The site is 38 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as atank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and as a troop training and

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

maneuver area from 1950s to 1980s.MRS-32B-Oil Well Road Training Area II: The site is 47 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32B include maintaining the land as habitat reserve. Based on historical training maps (circa 1954 and 1956), it was identified as the "Oil Well Road Training Area"; a portion of the site was reportedly used as a Tank Gunnery Range in 1950s; and the site may also have been used for firing of shoulder-launched projectiles.MRS-39-Mine and Booby Trap Area: The site is 12.1 acres in size, and is located east of General Jim Moore Boulevard and south of Gigling Road in the Marshall Park housing area. MRS-39 will continue to be used for military housing. The site was identified as a Mine and Booby Trap Training Area on 1957/1958 maps.MRS-49-Former Rifle Grenade Range: The site is 28 acres in size, and is located in the west central portion of former Fort Ord, south of Main Garrison and just north of military housing. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a training area and rifle grenade range in the 1940s and 1950s based on interviews conducted during the Preliminary Assessment/Site Inspection (PA/SI) phase of the Fort Ord Archive Search.MRS-59A-Unnamed: The site is 41 acres in size, and is located in the eastern portion of former Fort Ord near the East Garrison and MRS-5. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a possible 2.36-inch rocket range during interviews conducted during the PA/SI phase of the Fort Ord Archive Search. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps.MRS-62-Laguna Seca Open Space: The site is 247 acres in size, and is located at the southern end of former Fort Ord. The site is currently open space andproposed reuse plans include development. The site was identified as a small arms and flare training area during an interview with a former Fort Ord Fire Chief conducted during the PA/SI phase of Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, the site was used as a troop training and maneuver area from the late 1940s through 1980s; and the southern half of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-62 lies within a larger area identified during interviews conducted as part of the Archives Search as "Area T" and was a described as a general area where training may have occurred. The boundary of MRS-62 is based on transfer parcel delineation and not on evidence of munitions use. The boundary of MRS-62 was established to correspond to with disposal Parcel L20.6. Although the size of the parcel to be transferred has changed over time, the boundary of MRS-62 corresponds with the current boundary of Parcel L20.6.MRS-63-Canyon Training Area: The site is 28 acres in size, and is located at the southern end of former Fort Ord east of MRS-62. MRS-63 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as a small arms and flare training area during the PA/SI phase of the Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, most of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators.MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majority of the site lies on property transferred to California State University Monterey Bay (CSUMB) that is currently used for student housing or is proposed for development. A small portion of the site lies on property that is designated as habitat reserve. The site was identified as a reported signal corps field training area during the PA/SI phase of Fort Ord Archive Search, and other uses included aviation

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

training, basic unit training, and a bivouac area from 1950s until housing construction in 1989.MRS-69-Unnamed: The site is 37 acres in size, and is undeveloped open space located on the eastern side of former Fort Ord. MRS-69 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as an area of possible rifle grenade use based on interviews with a former Fort Ord Fire Chief. This site is within land transferred to the BLM and is open to the public for hiking, biking, and horseback riding. Use is limited to marked trails. The public has had access to this area for approximately 6 years.MRS-70-Unnamed: The site is 14 acres in size, and is located on the southeastern side of former Fort Ord, south of Oil Well Road. The site is currently a habitat reserve area managed by BLM, and is open to the public for recreational use. The area encompassing MRS-70 was identified as containing firing berms based on interviews with a former Fort Ord Fire Chief.A ROD addressing OU 9 was completed in April 2005.Operable Unit 2:The Fort Ord Landfills area was designated as Operable Unit 2 (OU2) when a remedial investigation identified the presence of volatile organic compounds (VOCs) associated with landfilled materials in groundwater beneath the site. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated groundwater and ongoing remediation of groundwater associated with OU2 is being conducted in accordance with the OU2 Record of Decision (ROD) and the Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD).In accordance with the OU2 ROD and the Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills, the Army completed removal and consolidation of refuse from the north landfill into the main landfill in October 1998 and installation of an engineered cover system for the main landfill in December 2002 as part of the closure process for the Fort Ord Landfills.At the Fort Ord Landfills, the perimeter fence line was initially designated as the boundary for landfill gas (LFG) compliance monitoring in accordance with applicable or relevant and appropriate requirements (ARARS) and LFG monitoring probes were installed inside the fence line. Monitoring of these probes commenced in June 2000. Fixed-based laboratory results and field measurements showed methane concentration exceeding the 5% regulatory standard in most probes. The Army performed an additional investigation in August 2000 and sampling results showed that methane was detectable extending out about 70 feet front the fence line on the east side of Area F. All probes were monitored again in September and December 2000, with the results again showing methane concentrations exceeding the 5% standard. In response the Army installed additional probes at locations around the outer parts of the OU2 property beyond the fence line in April and May 2001. Analytical results for these probes indicated that methane concentrations at the property boundary were less than the 5% standard, with the exception of the east side of Area F.The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volatile organic compounds (VOCs) in air between the Fort Ord Landfills and the nearest housing. These data were used to complete a screening levelhuman health risk assessment (HHRA) for nearby residences. The HHRA was updated after each monitoring event and attached as an appendix to each ambient air monitoring report. The HHRA concluded that there is a health risk for long-term exposure to VOCs in ambient air; however, the Army determined the data evaluated in the HHRA were limited and additional monitoring would be appropriate. Additional ambient air monitoring was conducted on a quarterly basis in 2003 and the HHRA updated to include these data and evaluate specifically landfill-related risk. The updated HHRA indicated the Fort Ord Landfills are not a significant contributor of VOCs

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

in ambient air or risk to downwind receptors.The following remedies for the Fort Ord Landfills were selected in the OU2 ROD:- A cover system to (1) prevent rainwater from percolating through the landfilled areas into the underlying aquifers; (2) collect and remove methane offgas (if necessary); and (3) prevent exposure of sanitary waste in the landfills to the surrounding environment.- Institutional controls (i.e., deed restrictions) to be placed on the property to ensure that the integrity of the cover system is maintained and prevent potential direct exposures of VOCs to the environment or people associated with future use of the site.- Institutional controls (i.e., deed restrictions) that prevent the use of groundwater within the contaminant plume.- Groundwater extraction and treatment, to be monitored on a regular basis and adjusted as warranted by the performance data collected during operation. Additionally, treated groundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface.Three previous ESDsto the OU2 ROD have been completed:- Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD). The OU2 ESD finalized the cleanup standard for the Upper 180-foot Aquifer to be consistent with those of the A-aquifer to facilitate the coordinated cleanup strategy for both aquifers. - Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills (Area A ESD). The Area A ESD addressed excavation and consolidation of refuse from the north landfill (Area A) into the main landfill (Areas B through F).- Explanation of Significant Differences, Consolidation of Remediation Waste in a Corrective Action Management Unit, Operable Unit 2, Fort Ord Landfills (CAMU ESD). The CAMU ESD addressed using remediation waste as foundation layer material instead of "clean" (uncontaminated) soil as described in the OU2 ROD.An additional ESD addressing OU2 was completed in October of 2006.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Delof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms tarsives. Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented informer Fort Ord subject to the provisions of the Fort Ord FFA. EPA OU-01: Fritzsche Army Airfield Fire Drill Area An investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wter treatment system is complete and is operational. In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will provide more clean land for re-use. The changes are documented in the Explanation of Signd grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, p in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well. EPA OU-08: OE Track 0 (No Further Action)the process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will contite 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are kned at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitanA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), an OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site wd of Decision addressing OE at EPA OU-10 was signed in September 2002. Operable Unit 10: MRS-3 Based on the MRS-3 sampling results, a MEC removal to four feet bgs was recommended per the Final Phase I Engineering Evaluation/Cost Analysis (Phase I E MEC items were removed. In addition, 293 items were removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Most of the items found at MRS-4B were consistent with the reportt MRS-13B at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from burial pits included grenade and mine fuzes, firing devices, pyrotechnics (signal, illumination and smoke), rockets, rifle and hand smoke grenades, blasting caps,items found within MRS-27G were generally of the types associated with overnight bivouac training sites and general maneuver areas. Within MRS-27G's boundaries a small number of 75 millimeter (mm) and 37mm items were removed, inspected and determinedemoval to four feet bgs. This MRS was subsequently subdivided into 240 100- X 100-foot removal grids. An investigation for MEC was conducted using the Schonstedt Model GA-52/Cx magnetometer, with all detected MEC removed. 50 MEC items were removed. Iere removed. In addition, 149 pounds of debris was removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Of the 26 MEC items recovered, 2 munitions (a MK I 75mm Shrapnel prtems were non-penetrating (e.g., pyrotechnics, grenades, and grenade and projectile fuzes) munitions. The penetrating military munitions found included projectiles, rifle grenades, and rockets. Both DMM and MD were found in numerous burial pits thatated all detected anomalies at 52 100- X 100-foot grids using a Schonstedt Model GA-52/Cx magnetometer. During this investigation, 19 MEC items were removed. In addition, 453 pounds of debris was removed, inspected and determined not to pose an exploal pits were discovered during the removal conducted at MRS-53. Both DMM and MD were found in burial pits at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from these pits included fuzes (grenade, mine, time, and projectile), sich 1998, 23 100- X 200-foot grids were identified at MRS-55. Subsequently, 19 of these grids were surveyed using a Schonstedt Model GA-52/Cx magnetometer with a maximum search lane width of 5 feet. Following the survey, anomalies were selected for in). Other sources of future land use information include public benefit conveyance, negotiated sale requests, transfer documents, and the Installation-Wide Multispecies Habitat Management Plan for Former Fort Ord, California. The Reuse Plan identifiedin ground disturbing activities (e.g., during construction/excavation). A ROD addressing Operable Unit 10 was completed in August 2008. The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acresm Action in the Record of Decision, Interim Action for Ordnance and Explosives at Ranges 43-48, Range 30.A, and Site OE-16, Former Fort Ord, California (Interim Action ROD; .Army, 2002), and the implementation of MEC remediation under the Interim Acton tetrachloride (CT) detected in three different aquifers up to 550 feet below ground surface (bgs). No records exist to indicate exactly when, how often, or how much CT may have been used, stored, or disposed of; however, by delineating

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the areas od by the Marina Coast Water District (MCWD) and is pumped from wells that are located east of the OUCTP area screened in the Lower 180-Foot Aquifer. Based on groundwater monitoring data and data provided by the MCWD, these drinking water wells have nnd flame thrower training. Most of this area has been used for military housing for over 40 years. MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housTraining Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in soesidential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as aBooby Traps and squad patrol training area based on revied reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as a tank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and a. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps. MRS-62-L78 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majoritsite. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated grounof Area F. The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volroundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface. Three previous ESDs to the OU2 ROD have been completed: - Explanation of Significant Differences, Operable Unit 2, Fort O

Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Waste code: D006
Waste name: CADMIUM

Waste code: D007
Waste name: CHROMIUM

Waste code: D008

Waste name: SILVER

Waste code: D018
Waste name: BENZENE

Waste code: D039
Waste name: TETRACHLOROETHYLENE

Corrective Action Summary:

Event date: 04/01/1986
Event: CA049PA

Event date: 04/01/1986
Event: CA029SF

Event date: 06/01/1987
Event: CA049SI

Event date: 01/01/1988
Event: Stabilization Measures Implemented, Groundwater extraction and treatment (e.g., to achieve groundwater containment, to achieve MCL).

Event date: 12/01/1988
Event: Stabilization Construction Completed

Event date: 07/23/1990
Event: RFI Imposition

Event date: 07/23/1990
Event: CMS Imposition

Event date: 12/01/1991
Event: CMS Workplan Approved

Event date: 12/01/1991
Event: RFI Workplan Approved

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

Event date: 01/17/1995
Event: CA Prioritization, Facility or area was assigned a high corrective action priority.

Event date: 01/01/1996
Event: CA Responsibility Referred To A Non-RCRA Federal Authority, Corrective Action at the facility or area referred to CERCLA.

Event date: 08/08/1996
Event: RFA Completed, Assessment was an RFA.

Event date: 01/13/1997
Event: CMS Approved

Event date: 01/13/1997
Event: Date For Remedy Selection (CM Imposed)

Event date: 01/13/1997
Event: RFI Approved

Event date: 04/08/1998
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 04/08/1998
Event: CA Responsibility Referred To A Non-RCRA Federal Authority

Event date: 04/08/1998
Event: Stabilization Measures Evaluation,This facility is not amenable to stabilization activity at the present time for reasons other than 1- it appears to be technically infeasible or inappropriate (NF) or 2- there is a lack of technical information (IN). Reasons for this conclusion may be the status of closure at the facility, the degree of risk, timing considerations, the status of corrective action work at the facility, or other administrative considerations.

Event date: 04/08/1998
Event: Current Human Exposures under Control, Current human exposures are NOT under control.

Event date: 05/22/2000
Event: Igration of Contaminated Groundwater under Control, Unacceptable migration of contaminated groundwater is observed or expected.

Event date: 05/22/2000
Event: Current Human Exposures under Control, Current human exposures are NOT under control.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

Summary Details:

Conditions at proposal July 14, 1989): Fort Ord covers 46 square miles on Monterey Bay approximately 5.6 miles north of Monterey, Monterey County, California. The installation is bordered by the City of Marina and the Salinas River to the north, El Toro Creek to the east, Seaside and Del Rey Oaks to the south, and Monterey Bay to the west. Fort Ord was established in 1917 as a maneuver area and field artillery target range for units then stationed at the Presidio of Monterey. Its primary mission now is training. Industrial operations at Fort Ord include vehicle maintenance areas, a battery charging/repair facility, photographic processing laboratories, spray painting operations, a plastics shop, laundry/dry cleaning facilities, vehicle wash racks, and a small arms repair shop. Chemicals and ha ardous wastes were managed and disposed of at Fort Ord. According to tests conducted by the Army in 1986, elevated levels of contaminants were detected in off-base ground water. The contamination is emanating from the base and may be contaminating the drinking water supplies of the City of Marina; however, the exact location of the source has not yet been identified. The contaminants includecarbon tetrachloride, tetrachloroethylene, trichloroethylene, 1,1,1-trichloroethane, and trans-1,2-dichloroethylene. An estimated 38,600 people obtain drinking water from wells within 3 miles of ha ardous substances on the fort. Ground water is also used for irrigation. In addition, soil and ground water are contaminated at the Fire Drill Area, where approximately 600 gallons of petroleum products have been spilled. Fort Ord has identified at least 18 other contamination problems.Fort Ord is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part of IRP, theArmy is implementing a sampling plan to investigate ground water contamination. The Army is treating contaminated soil and ground water at nearby Frit sche Army Airfield Fire Drill Area. Status February 21, 1990): IRP activities continue.

Site Description: The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. Environmental investigations began at Fort Ord in 1984 under the Regional Water Quality Control Board (RWQCB) cleanup or abatement orders. In 1986, further investigations began at Operable Unit 2 (OU2). In 1990, Fort Ord was placed on the National Priorities List (NPL) because of Volatile Organic Compounds (VOCs) found in ground water beneath OU2. A Federal Facility Agreement (FFA) was signed in 1990 by the Army, U.S. Environmental Protection Agency, the California Environmental Protection Agency's Department of Toxic Substances Control (DSTC)

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and Regional Water Quality control Board (RWQCB). The FFA established schedules for commencing Remedial Investigations and Feasibility Studies (RI/FS). In 1991, the basewide RI/FS began and Fort Ord was placed on the Base Realignment and Closure list. The final FS for OU2 was completed on October 1, 1993, and the Record of Decision (ROD) was signed in August 1994. An Interim Action Plug-In ROD was signed in March 1994 for excavation and treatment of shallow contaminated soils. The Draft and Draft Final Versions of the Basewide RI/FS were completed in August 1994 and December 1994, respectively.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Del Rey Oaks to the south and Marina to the north. The Southern Pacific Railroad and Highway 1 pass through the western portion of former Fort Ord, separating the beachfront from the rest of the base. Laguna Seca Recreation Area and Toro Regional Park border former Fort Ord to the south and southeast, respectively, as well as several small communities such as Toro Park Estates and San Benancio.There are three main developed areas within Fort Ord: the Main Garrison, the East Garrison and Fritzsche Army Airfield (FAAF). The Main Garrison contains commercial, residential, and light industrial facilities. The East Garrison occupies 350 acres on the northeastern edge of the base and consists of military and industrial support areas, recreationalfacilities, and recreational open space. The FAAF serves as the general airfield for Fort Ord. EPA placed the site on the National Priorities List in 1990. Several areas of contamination exist on site. Generally, chemicals present in soil are the result of former routine maintenance and support activities on Fort Ord. Such activities include: maintenance of military vehicles at wash racks, tank storage of chemicals such as waste oil, the use of oil/water separators in drainage areas, and pesticide use and storage. The facility contained leaking petroleum underground storage tanks, containers of waste oil and various automotive chemicals, chemical storage areas, oil-waste separators, target ranges, and landfills. One on-site area is a 150-acre landfill that was primarily used to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Recordof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms target ranges. Over 12,000 acres are suspected of containing ordnance and explosives (OE). In particular, the 8,000 acre Multi-Range Area (MRA) is known to contain dangerous unexploded ordnance. OE investigations are complicated by technological limitations and protected habitat that covers the area and requires special management pursuant to the base Habitat Management Plan (HMP). This includes the current requirement to use prescribed burns to clear vegetation prior to OE removal. The HMP currently restricts burns to 800 acres/year, thus requiring at least 10 years to address OE in the MRA.The aquifers at the site are called the upper aquifer and the 180-foot aquifer. Approximately 40,000 people obtain drinking water from wells located within 3 miles of the site.Since opening in 1917, Fort Ord served as a training and staging facility for Army infantry troops. No permanent improvements were made until the late 1930s when administrative buildings, barracks, mess halls, tent pads, and a sewage treatment plant were constructed. The Main Garrison was constructed between 1940 and the 1960s, starting in the northwest corner of the base and expanding southeastward. The FAAF was incorporated into Fort Ord in 1961. Since 1917, portions of the Installation were used by infantry units for maneuvers, target ranges, and other purposes. Ordnance and explosives (OE) that have been fired into, fired upon, or used on the facility include artillery and mortar projectiles, rockets

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and guided missiles, rifle and hand grenades, practice land mines, pyrotechnics, bombs, and demolition materials. A wide variety of conventional OE items have been located at sites throughout the former Fort Ord, including pyrotechnics and explosives.Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented in preparation for transfer and reuse of former Fort Ord property. The Ord Military Community, located within the Main Garrison portion of former Fort Ord, will be retained by the Army. Since base closure in September 1994, lands outside the Ord Military Community have been subjected to the reuse process. Some of the property on the installation has been transferred. A large portion of the Inland Training Ranges was assigned to the Bureau of Land Management (BLM). The other major recipient of Fort Ord property has been the California State University (CSU) system. The CSU Monterey campus is located on the site of the former Fort Ord and is expected to expand in the future. Other areas on the installation have been or will be transferred to federal, state, local, and private entities through economic development conveyance, public benefit conveyance, negotiated sale, or other means.The reuse of the former Fort Ord following transfer of property increases the possibility of the public beingexposed to explosive hazards. In November 1998, the Army agreed to evaluate OE at former Fort Ord in an OE Remedial Investigation/Feasibility Study (RI/FS) consistent with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). A Federal Facility Agreement (FFA) was signed in 1990 by the Army, EPA, and the California Environmental Protection Agency's Department of Toxic Substances control (DTSC; formerly the Department of Health Services or DHS). The FFA established schedules for performing remedial investigations and feasibility studies and requires that remedial actions be completed as expeditiously as possible. In April 2000, an agreement was signed between the Army, EPA and DTSC to evaluate OE at theformer Fort Ord subject to the provisions of the Fort Ord FFA.EPA OU-01: Fritzsche Army Airfield Fire Drill AreaAn investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wassigned in September 1995. Groundwater cleanup standards were established in the ROD which must be met through the existing pump and treat system. The selected remedy is consistent with the initial action described above. The groundwater treatment system was installed in 1988. In 2004, the Army awarded a fixed price contract for the management and completion of the groundwater cleanup remedy at Operable Unit 1.EPA OU-02: Fort Ord LandfillOne on-site area is a 150-acre landfill that was primarilyused to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Record of Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed.The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. In 1994, the Army completed an investigation focusing on groundwater andsoil contamination originating from the landfill. A Record of Decision (ROD) was signed in August 1994. The ROD included capping the landfill and installing a groundwater pump and treatment system. Construction of the groundwater treatment system is complete and is operational.In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

provide more clean land for re-use. The changes are documented in the Explanation of Significant Differences (ESD) in August 1996.The consolidation is complete and capping of the main landfill was completed in December 2002. The Army has installed an active landfill gas extraction and treatment system to capture and remediate methane andother volatile organic compound gases that are being generated by decaying materials in the landfill. The Army continues to monitor landfill gases to ensure that do not pose a health hazardEPA OU-03: Overall SiteIn 1990, the Army began further investigations into the nature and extent of on- and off-site soil and groundwater contamination, as well as any ecological or health threats that may be present. The investigation identified three waste disposal sites, firing ranges, and a vehicle maintenance area that require extensive cleanup actions. The Army completed the RI/FS and ROD in 1997, and all soil cleanup actions are complete, and groundwater pump and treatment systems are operational. The action included remediating the Sites 2/12 maintenance/disposal area by soil excavation and ongoing groundwater remediation, Sites 16/17 disposal area by soil excavation, Site 31 disposal area by soil excavation, and Site 39 small arms ranges by soil excavation. Most of the excavated soils were placed at the Fort Ord Landfill, which was closed in December 2002. The Army is currently evaluating treatment/disposal options for additional Site 39 soils to be excavated.Site 39, which includes the Multi-Range Area (MRA), was reportedly used sincethe early 1900s for small arms training and ordnance training exercises, including onshore naval gunfire. Over the years, in addition to small arms rounds, various types of ordnance have been used or found in the MRA, including hand grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, petroleum hydrocarbons, and other metals associated with training activities. Ordnance is being addressed through other remedial or removal actions.Site 39 comprises approximately 8,500 acres in the southern portion of Fort Ord. Site 39 is bounded byEucalyptus Road to the north, Barloy Canyon Road to the east, Boundary Road and South Boundary Road to the south, and General Jim Moore Blvd to the west.Results of the RI indicate the metals lead and beryllium, explosive compounds, and organic compounds are present in shallow soil above background concentrations in localized areas at Site 39, and are associated with past military training activities.Spent ammunition found at the Small Arms Ranges consists of bullets, black powder rifle balls, and lead shot. Lead is the primary chemical of concern in soil at the Small Arms Ranges at Site 39. In localized areas, spent ammunition is found on the ground surface.An Explanation of Significant Differences addressing OU 3 was completed in December2003.EPA OU-04: Surface SoilsEPA OU-05: No Action SoilsEPA OU-07: Site 3 Beach RangeSite 3 is situated within about 3.2 miles (780 acres) of dunes along the coastline of Monterey Bay at the western boundary of Fort Ord. Results of the investigation indicate lead from small arms is the main contaminant at the site. The site is also home of the Smith's Blue butterfly, an endangered species, and buckwheat plants which the butterflies use to lay their eggs on. In 1997, the Army completed a ROD allowing them to first clean up the lead contamination to address human health concerns by soil excavation and placement in the Fort Ord Landfill, which was simultaneously being remediated (capped). This cleanup was completed in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well.EPA OU-08: OE Track 0 (No Further Action)The Track 0 process addresses single or grouped areas of land at the former Fort Ord that have no history of OE-related use and for which No Action is necessary to protect human health and the environment. These areas consist largely of land that has been developed for military support or residential use throughout Fort Ord's history and areas

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

that have no physical or documented evidence of OE-related training. A Track 0 Special Case area includes a former landfill where OE scrap items were found buried with refuse. No OE-related activities occurred in the area and the OE scrap items and the refuse were entirely removed.Track 0 areas were grouped geographically: e.g., all non-OE land in the Main Garrison was grouped and discussed together as one area. Track 0 includes parcels in the following areas:- Highway 1 Area- Golf Course Maintenance Area- Brostrom Park Area- Patton/Abrams Park Housing Area- Open Space, Main Entrance Area- Surplus II Area- Fritzsche Army Airfield Area- East Garrison Area- Main Garrison Area- OU 2 Landfill Area- Reservation Road AreaTrack 0 sites were addressed by a No Further Action Record of Decision (ROD) dated July 2, 2002.The Army has been conducting military munitions sampling and removal actions at identified Munitions Response Sites (MRS) and will continue these actions to mitigate imminent MEC-related hazards to the public while gathering data about the type of military munitions and level of hazard at each of the sites for use in the base-wide MR RI/FS. The Army is performing its activities pursuant to the President's authority under the CERCLA Section 104, as delegated to the Army in accordance with Executive Order 12580 and in compliance withthe process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will continue to be involved. The Army is preparing the MR RI/FS for Fort Ord to address MEC-related hazards. The MR RI/FS will review and evaluate past investigative and removal actions, as well as recommend future response actions deemed necessary to protect human health and the environment on the basis of proposed reuses specified in the Fort Ord Reuse Authority (FORA) Reuse Plan.The information to be evaluated during the MR RI/FS will include site knowledge, the quality of the available information,work completed, and intended future land uses. The base-wide MR RI/FS will contain a comprehensive evaluation of all MEC-related data for the entire former Fort Ord and will evaluate long-term response alternatives for cleanup and risk management ofMEC.The MR RI/FS is organized as a "tracking" process whereby sites with similar characteristics will be grouped to expedite cleanup, reuse, and/or transfer based on current knowledge. The Track 0 Record of Decision (ROD) addresses areas on the former Fort Ord that have been identified as requiring no munitions response to protect human health (public safety) and the environment (Track 0 areas). Other Track (1 through 3) areas will be addressed separately for the other lands that have or are suspected to have a history of military munitions-related use and investigations completed to date. Track 1 sites were suspected to have been used for training with military munitions but for which no further response action is required because they fall into one of the three categories defined in Record of Decision, No Further Action Related to Munitions and Explosives of Concern-Track 1 Sites; No Further Remedial Action with Monitoring for Ecological Risks from Chemical Contamination at Site 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are known or suspected to be present, but MEC investigations have not yet been completed.All base-wide MR RI/FS documents have been or will be prepared in cooperation with the EPA and DTSC in accordance with the Fort Ord FFA; made available for public review and comment; and placed in the Administrative Record and local information repositories.A ROD addressing OU 8 was completed in 2002. An Explanation of Significant Difference (ESD) pertaining to the OU8 ROD was completed in April of 2005.EPA OU-09: OE Track 1Track 1 sites are sites where munitions and explosives of concern were suspected but no further remedial action was deemed necessary to protect human health and the environment. The Track 1 Proposed Plan was issued for public comment on September 15, 2004 and

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the ROD is scheduled to be signed in 2005.EPA OU-10: OE at Ranges 43-48, Range 30A, and Site OE-16Ranges 43-48 cover approximately 498 acres to the south of Eucalyptus Road in the south-central portion of the former Fort Ord. The majority of the site is designated as habitat reserve and will remain undeveloped (473 acres), and a limited portion of the site (25 acres) will be developed and reused.These ranges were part of the former Fort Ord's Multi-Range Area (MRA) and are categorized as firing ranges where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Ranges 43-48 mainly consists of central maritime chaparral (CMC)with some grassland areas.Training facilities maps indicate these ranges were used for a variety of live fire exercises from the 1940s through the 1990s. Records and recent field investigations indicate the ammunition used at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitank weapon (LAW); small arms; practice anti-personnel mines; dragon guided missiles; practice claymore mines; and fragmentation hand grenades.The former firing ranges contain sensitively fuzed, highly dangerous OE present on the ground surface or at shallow depths below the ground. As described above, numerous types of OE ranging from hand grenades to 90mm recoilless rifle rounds are known or suspected to be on the site. During recent limited surface removals in 2001, thousands of OE items were recovered at Ranges 43-48.This Interim Action site is adjacent to (less than 4,000 feet from) residential neighborhoods at Ord Military Community (Fitch and Marshall Parks) and is near the City of Seaside. The Fitch and Martin Luther King Jr. Middle Schools are located less than a mile from Ranges 43-48. Existing site security measures include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In the last three years, five documented incidents of persons trespassing into the Ranges 43-48 site occurred. In 1999, there were two documented cases of children entering the fenced MRA at Ranges44 and 45, and collecting and removing 40mm practice grenades found on the ground surface. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The majority of this Interim Action site is designated as habitat reserve and will remain undeveloped. Future reuse of Transfer Parcel E21b.3 is development.Range 30A includes approximately 388 acres located in the southeastern portion of the MRA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerFort Ord MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Range 30A mainly consists of CMC with somegrassland areas.Range 30A was constructed in 1990 as a 40mm machine gun range and was in use until 1993. According to the Fort Ord Training Ranges Standard Operating Procedure (SOP), the only weapon authorized for use at Range 30A from 1991 and 1992was the MK19 40mm machine gun, Mod 3. Ammunition authorized for use at Range 30A included HE, high explosive dual purpose (HEDP) and target practice (TP).Range 30A is known to contain sensitively fuzed, highly dangerous 40mm grenades and evidence of60mm and 81mm mortars and 37mm, 75mm, 155mm, and 8-inch projectiles. Limited surface removals in 2001 in the accessible areas of Range 30A have recovered hundreds of whole or partial OE and OE scrap items.The Range 30A Interim Action site is locatedin close proximity (approximately 2,200 feet north) to the Laguna Seca residential area and Laguna Seca Golf Course, and less than a mile from the Laguna Seca Raceway.

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

South Boundary Road, located approximately 2,000 feet to the south, is open to vehicular traffic during events at Laguna Seca Raceway and is always open to the public for jogging, hiking, and biking. This range was part of the former Fort Ord's MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Existing access deterrents include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), and three other incidents of fence damage were reported within 4,000 feet of the range (near Range 29). Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.As part of the closure of the former Fort Ord, the MRA will be transferred to the BLM and most of the MRA will remain undeveloped as habitat reserve. The habitat management plan (HMP) presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.Site OE-16 includes approximately 80 acres located immediately north of the former Fort Ord MRA, between Eucalyptus and Parker Flats roads and bounded by Watkins Gate Road to the east (Plate 5). This site will become habitat reserve and will remain undeveloped. The Bureau of Land Management (BLM) land (immediately adjacent) is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence. The site is posted with signs warning of the dangers associated with unexploded ordnance. Vegetation at Site OE-16 mainly consists of CMC with some grassland areas.Site OE-16 is a World War II (WWII) era rocket range, and is identified as a "bazooka practice" area on Fort Ord Training Facilities maps dating from 1945 and 1946. Available training maps after 1946 do not identify the bazooka practice area. According to Fort Ord Range Control, this range was probably used as an antitank rocket range during and shortly after WWII. Available information indicates that Site OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site was later used for a portion of time as an anti-armor training area. Evidence from the site indicates that both practice and HEAT rounds were used.Site OE-16 contains sensitively fuzed, highly dangerous OE, such as HEAT projectiles, present on the ground surface or at shallow depths below the ground. During recent limited surface removals in 2001, hundreds of OE items, including expended and live 2.36-inch rockets (practice and HEAT), practice antitank mines, rifle grenades, hand grenade fuzes, and OE scrap were recovered.Site OE-16 is located adjacent to the MRA and land that has been transferred to the BLM. The BLM land is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence posted with signs warning of the dangers associated with unexploded ordnance. The site is in close proximity to a residential neighborhood (Fitch Park) on the former Fort Ord. In 2001, an incident of persons trespassing withinthe MRA adjacent to Site OE-16 was reported. In addition, five incidents of trespassing into the MRA adjacent to Site OE-16 occurred within the last three years. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The land that includes Site OE-16 will be transferred to the BLM and will remain undeveloped as habitat reserve. The HMP for former Fort Ord presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.An Interim Action Record of Decision addressing OE at EPA OU-10 was signed in September 2002.The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acres was burned. The Army is studying the October 2003 burn to understand both what went right and what went wrong. Ordnance has been cleared from the surface of the entire burned area and subsurface clearance is ongoing. The next prescribed burn is scheduled to take place in 2005.OU-10 Track 2 Sites:Track 2 sites are sites where munitions and explosives of concern were found and a removal action was conducted to clean it up. The first of several Track 2 RI/FS reports is due to be issued in 2005 for the area of Fort Ord known as Parker Flats.EPA OU-11: OE Track 3Track 3 sites are sites where munitions and explosives of concern are known to be present but no cleanup has been conducted yet. The final Track 3 ROD is expected to be completed by 2007, with UXO cleanup work continuing for at least 10 years thereafter.EPA OU-12: Carbon Tetrachloride PlumeThe Army has initiated a remedial investigation/feasibility study of another area of groundwater contamination, the so-called "carbon tetrachloride plume operable unit", near the City of Marina. Contaminants slightly above regulatory standards have been found in offsite groundwater. This area of contamination is not being used for drinking water. Potential source areas are also being investigated. A soil vapor sampling and extraction system pilot study was conducted in 2004 to address the vadose zone above the carbon tetrachloride plume area. The pilot study was very successful and appears to have removed significant mass from the vadose zone. The Army expects to complete the draft Remedial Investigation/Feasibility Study Report for the carbon tetrachloride plume operable unit in 2005.OU 9:A list of the 21 Track 1 sites for which No Further Action Related to MEC is required is comprised of:MRS-1-Flame Thrower Range: The site is 25 acres in size, and is located in the northwestern part of former Fort Ord. MRS-1 is currently occupied by housing. Proposed reuse plans include residential development. Based on the literature review and sampling, the site appears to have been used for camouflage training, mine and booby trap training, non-firing mortar training, and flame thrower training. Most of this area has been used for military housing for over 40 years.MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housing. The site is currently undeveloped with proposed reuse plans to include development with reserve areas or development with restrictions. Review of training maps, aerial photographs, and other Fort Ord maps indicate mine and booby trap training occurred at the site. The adjacent areas have been used as a school and military housing for over 40 years.MRS-13A-Practice Mortar Range: The site is 61 acres in size, and is located in the northern portion of the former Fort Ord. Proposed reuse plans for MRS-13A include residential development and a park. The majority of the site has contained residential housing for nearly 30 years. The area was extensively graded in the 1970s and housing was built on portions of the site. The western portion of the site was used as a landfill in the 1960s. All landfill material in the western portion of MRS-13A was excavated (removed) and transported tothe main landfill south of Immix Road in the 1990s. Several munitions debris items and three unexploded ordnance (UXO) items were identified within and adjacent to MRS-13A during landfill excavation and housing development grading activities and were removed: three live ground signals and loose pyrotechnic material; three inert hand grenade primer detonators; two inert 40mm signal cartridges; an inert fin assembly for a 3.5-inch rocket; a live rifle grenade; miscellaneous projectiles; and two inert 3.5-inch rocket motors.MRS-20-Recoilless Rifle Training Range: The site is 7 acres in size, and is located in the southwestern portion of the Main Garrison near residential housing and Highway 1. This site is currently open space with

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

proposed reuse plans, which include development. The site was identified as a potential Recoilless Rifle Training Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in some cases, could be fired by either method.MRS-22 (Site 3)-Beach Trainfire Ranges: The site is 952 acres in size, and is located on the Monterey Baycoastline along the western margin of former Fort Ord as shown on Plate 2. The site is currently open space with the proposed reuse of the site to include a State park with open space and recreational areas. Training maps, aerial photographs, and interviews indicate the site was used as the Beach Trainfire Ranges from 1940s until base closure in 1994. The ranges contained 17 small arms firing ranges; an obstacle course; a bivouac area; a rifle instruction circle; a bayonet assault course; chemical, biological, and radiological (CBR) training areas; target detection training areas; an infiltration course; and a former ammunition supply point. CBR training at MRS-22 (Site 3) only involved training troops in the identification of targets while wearing gas masks, and did not involve the use of chemical, biological or radiological materials. Training at the Beach Trainfire Ranges reportedly also included occasional practice mortar use with inert training devices, amphibious assault landings, and battle demonstrations.MRS-24B-Practice Hand Grenade Range: The site is 14.2 acres in size, and is located in the west-central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the Impact Area. MRS-24B will continue to be used for military housing. Historical and sampling information indicate the site was used as practice hand grenade range in the 1940s.MRS-24D-Booby Traps: The site is 1.8 acres in size, and is located in the west central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as a "Booby Traps" and squad patrol training area based on review of a 1946 historical map; however, the site boundary was northwest of the area shown as "Booby Traps" on 1945 and 1946 training maps.MRS-24E-Practice Rifle Grenade Range: The site is 2.7 acres in size, and is located in the west central portion of former Fort Ord. The site is also located south of the Main Garrison and just north of the former Impact Area within a military housing complex. MRS-24E will continue to be used for military housing. MRS-24E was identified as a Practice Rifle Grenade Range on 1945/1946 training maps, but no evidence of this use was discovered during sampling at the site.MRS-27X-Training Site 24: The site is 79.5 acres in size, and is undeveloped open space located in the southeastern portion of former Fort Ord. MRS-27X is currently a habitat reserve area managed by the Bureau of Land Management (BLM), and is open to the public for recreational use. Based on review of Fort Ord training maps, the site was used as a troop training and maneuver area from the 1950s to 1970s, and as an overnight bivouac area and medical training area in the 1980s.MRS-27Y-Training Site 25: The site is 25 acres in size,and is mainly undeveloped open space located in the eastern portion of former Fort Ord along Inter-Garrison Road. A small portion of the site also lies on property that was transferred to California State University Monterey Bay in 1995 for development. The site was identified as one of 26 training sites within Fort Ord Training and Maneuver Areas used as troop training, maneuver, and overnight bivouac areas.MRS-32A-Oil Well Road Training Area: The site is 38 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as atank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and as a troop training and

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

maneuver area from 1950s to 1980s.MRS-32B-Oil Well Road Training Area II: The site is 47 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32B include maintaining the land as habitat reserve. Based on historical training maps (circa 1954 and 1956), it was identified as the "Oil Well Road Training Area"; a portion of the site was reportedly used as a Tank Gunnery Range in 1950s; and the site may also have been used for firing of shoulder-launched projectiles.MRS-39-Mine and Booby Trap Area: The site is 12.1 acres in size, and is located east of General Jim Moore Boulevard and south of Gigling Road in the Marshall Park housing area. MRS-39 will continue to be used for military housing. The site was identified as a Mine and Booby Trap Training Area on 1957/1958 maps.MRS-49-Former Rifle Grenade Range: The site is 28 acres in size, and is located in the west central portion of former Fort Ord, south of Main Garrison and just north of military housing. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a training area and rifle grenade range in the 1940s and 1950s based on interviews conducted during the Preliminary Assessment/Site Inspection (PA/SI) phase of the Fort Ord Archive Search.MRS-59A-Unnamed: The site is 41 acres in size, and is located in the eastern portion of former Fort Ord near the East Garrison and MRS-5. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a possible 2.36-inch rocket range during interviews conducted during the PA/SI phase of the Fort Ord Archive Search. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps.MRS-62-Laguna Seca Open Space: The site is 247 acres in size, and is located at the southern end of former Fort Ord. The site is currently open space andproposed reuse plans include development. The site was identified as a small arms and flare training area during an interview with a former Fort Ord Fire Chief conducted during the PA/SI phase of Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, the site was used as a troop training and maneuver area from the late 1940s through 1980s; and the southern half of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-62 lies within a larger area identified during interviews conducted as part of the Archives Search as "Area T" and was a described as a general area where training may have occurred. The boundary of MRS-62 is based on transfer parcel delineation and not on evidence of munitions use. The boundary of MRS-62 was established to correspond to with disposal Parcel L20.6. Although the size of the parcel to be transferred has changed over time, the boundary of MRS-62 corresponds with the current boundary of Parcel L20.6.MRS-63-Canyon Training Area: The site is 28 acres in size, and is located at the southern end of former Fort Ord east of MRS-62. MRS-63 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as a small arms and flare training area during the PA/SI phase of the Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, most of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators.MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majority of the site lies on property transferred to California State University Monterey Bay (CSUMB) that is currently used for student housing or is proposed for development. A small portion of the site lies on property that is designated as habitat reserve. The site was identified as a reported signal corps field training area during the PA/SI phase of Fort Ord Archive Search, and other uses included aviation

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

training, basic unit training, and a bivouac area from 1950s until housing construction in 1989.MRS-69-Unnamed: The site is 37 acres in size, and is undeveloped open space located on the eastern side of former Fort Ord. MRS-69 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as an area of possible rifle grenade use based on interviews with a former Fort Ord Fire Chief. This site is within land transferred to the BLM and is open to the public for hiking, biking, and horseback riding. Use is limited to marked trails. The public has had access to this area for approximately 6 years.MRS-70-Unnamed: The site is 14 acres in size, and is located on the southeastern side of former Fort Ord, south of Oil Well Road. The site is currently a habitat reserve area managed by BLM, and is open to the public for recreational use. The area encompassing MRS-70 was identified as containing firing berms based on interviews with a former Fort Ord Fire Chief.A ROD addressing OU 9 was completed in April 2005.Operable Unit 2:The Fort Ord Landfills area was designated as Operable Unit 2 (OU2) when a remedial investigation identified the presence of volatile organic compounds (VOCs) associated with landfilled materials in groundwater beneath the site. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated groundwater and ongoing remediation of groundwater associated with OU2 is being conducted in accordance with the OU2 Record of Decision (ROD) and the Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD).In accordance with the OU2 ROD and the Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills, the Army completed removal and consolidation of refuse from the north landfill into the main landfill in October 1998 and installation of an engineered cover system for the main landfill in December 2002 as part of the closure process for the Fort Ord Landfills.At the Fort Ord Landfills, the perimeter fence line was initially designated as the boundary for landfill gas (LFG) compliance monitoring in accordance with applicable or relevant and appropriate requirements (ARARS) and LFG monitoring probes were installed inside the fence line. Monitoring of these probes commenced in June 2000. Fixed-based laboratory results and field measurements showed methane concentration exceeding the 5% regulatory standard in most probes. The Army performed an additional investigation in August 2000 and sampling results showed that methane was detectable extending out about 70 feet front the fence line on the east side of Area F. All probes were monitored again in September and December 2000, with the results again showing methane concentrations exceeding the 5% standard. In response the Army installed additional probes at locations around the outer parts of the OU2 property beyond the fence line in April and May 2001. Analytical results for these probes indicated that methane concentrations at the property boundary were less than the 5% standard, with the exception of the east side of Area F.The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volatile organic compounds (VOCs) in air between the Fort Ord Landfills and the nearest housing. These data were used to complete a screening levelhuman health risk assessment (HHRA) for nearby residences. The HHRA was updated after each monitoring event and attached as an appendix to each ambient air monitoring report. The HHRA concluded that there is a health risk for long-term exposure to VOCs in ambient air; however, the Army determined the data evaluated in the HHRA were limited and additional monitoring would be appropriate. Additional ambient air monitoring was conducted on a quarterly basis in 2003 and the HHRA updated to include these data and evaluate specifically landfill-related risk. The updated HHRA indicated the Fort Ord Landfills are not a significant contributor of VOCs

USARMY FORT ORD (Continued) **1000393341**

in ambient air or risk to downwind receptors.The following remedies for the Fort Ord Landfills were selected in the OU2 ROD:- A cover system to (1) prevent rainwater from percolating through the landfilled areas into the underlying aquifers; (2) collect and remove methane offgas (if necessary); and (3) prevent exposure of sanitary waste in the landfills to the surrounding environment.- Institutional controls (i.e., deed restrictions) to be placed on the property to ensure that the integrity of the cover system is maintained and prevent potential direct exposures of VOCs to the environment or people associated with future use of the site.- Institutional controls (i.e., deed restrictions) that prevent the use of groundwater within the contaminant plume.- Groundwater extraction and treatment, to be monitored on a regular basis and adjusted as warranted by the performance data collected during operation. Additionally, treated groundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface.Three previous ESDsto the OU2 ROD have been completed:- Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD). The OU2 ESD finalized the cleanup standard for the Upper 180-foot Aquifer to be consistent with those of the A-aquifer to facilitate the coordinated cleanup strategy for both aquifers. - Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills (Area A ESD). The Area A ESD addressed excavation and consolidation of refuse from the north landfill (Area A) into the main landfill (Areas B through F).- Explanation of Significant Differences, Consolidation of Remediation Waste in a Corrective Action Management Unit, Operable Unit 2, Fort Ord Landfills (CAMU ESD). The CAMU ESD addressed using remediation waste as foundation layer material instead of "clean" (uncontaminated) soil as described in the OU2 ROD.An additional ESD addressing OU2 was completed in October of 2006.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Delof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms tarsives. Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented informer Fort Ord subject to the provisions of the Fort Ord FFA. EPA OU-01: Fritzsche Army Airfield Fire Drill Area An investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wter treatment system is complete and is operational. In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will provide more clean land for re-use. The changes are documented in the Explanation of Signd grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, p in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well. EPA OU-08: OE Track 0 (No Further Action)the process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will contite 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are kned at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm

USARMY FORT ORD (Continued) **1000393341**

subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitanA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), an OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site wd of Decision addressing OE at EPA OU-10 was signed in September 2002. Operable Unit 10: MRS-3 Based on the MRS-3 sampling results, a MEC removal to four feet bgs was recommended per the Final Phase I Engineering Evaluation/Cost Analysis (Phase I E MEC items were removed. In addition, 293 items were removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Most of the items found at MRS-4B were consistent with the reportt MRS-13B at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from burial pits included grenade and mine fuzes, firing devices, pyrotechnics (signal, illumination and smoke), rockets, rifle and hand smoke grenades, blasting caps,items found within MRS-27G were generally of the types associated with overnight bivouac training sites and general maneuver areas. Within MRS-27G's boundaries a small number of 75 millimeter (mm) and 37mm items were removed, inspected and determinedemoval to four feet bgs. This MRS was subsequently subdivided into 240 100- X 100-foot removal grids. An investigation for MEC was conducted using the Schonstedt Model GA-52/Cx magnetometer, with all detected MEC removed. 50 MEC items were removed. Iere removed. In addition, 149 pounds of debris was removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Of the 26 MEC items recovered, 2 munitions (a MK I 75mm Shrapnel prtems were non-penetrating (e.g., pyrotechnics, grenades, and grenade and projectile fuzes) munitions. The penetrating military munitions found included projectiles, rifle grenades, and rockets. Both DMM and MD were found in numerous burial pits thatated all detected anomalies at 52 100- X 100-foot grids using a Schonstedt Model GA-52/Cx magnetometer. During this investigation, 19 MEC items were removed. In addition, 453 pounds of debris was removed, inspected and determined not to pose an exploal pits were discovered during the removal conducted at MRS-53. Both DMM and MD were found in burial pits at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from these pits included fuzes (grenade, mine, time, and projectile), sich 1998, 23 100- X 200-foot grids were identified at MRS-55. Subsequently, 19 of these grids were surveyed using a Schonstedt Model GA-52/Cx magnetometer with a maximum search lane width of 5 feet. Following the survey, anomalies were selected for in). Other sources of future land use information include public benefit conveyance, negotiated sale requests, transfer documents, and the Installation-Wide Multispecies Habitat Management Plan for Former Fort Ord, California. The Reuse Plan identifiedin ground disturbing activities (e.g., during construction/excavation). A ROD addressing Operable Unit 10 was completed in August 2008. The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acresm Action in the Record of Decision, Interim Action for Ordnance and Explosives at Ranges 43-48, Range 30.A, and Site OE-16, Former Fort Ord, California (Interim Action ROD; .Army, 2002), and the implementation of MEC remediation under the Interim Acton tetrachloride (CT) detected in three different aquifers up to 550 feet below ground surface (bgs). No records exist to indicate exactly when, how often, or how much CT may have been used, stored, or disposed of; however, by delineating

the areas od by the Marina Coast Water District (MCWD) and is pumped from wells that are located east of the OUCTP area screened in the Lower 180-Foot Aquifer. Based on groundwater monitoring data and data provided by the MCWD, these drinking water wells have nnd flame thrower training. Most of this area has been used for military housing for over 40 years. MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housTraining Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in soesidential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as aBooby Traps and squad patrol training area based on revied reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as a tank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and a. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps. MRS-62-L78 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majoritsite. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated grounof Area F. The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volroundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface. Three previous ESDs to the OU2 ROD have been completed: - Explanation of Significant Differences, Operable Unit 2, Fort O

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

BREAKWATER COVE MARINA (Continued) **S105620352**

Reclamation: Not reported
POTW: Not reported
Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or thosewho must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Local Agency:	Not reported
RB Case Number:	S2831
File Location:	Regional Board
Potential Media Affected:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Benzene, Toluene, Diesel, Gasoline
General Comments:	A former fueling station. Underground storage tanks and product piping were removed in 1993 and 1994. A high vacuum extraction system was installed in 1998. Due to reaching asymptotic levels with high vacuum extraction, current remediation is using passive skimmers. Product removal activities are ongoing in five wells.

Local Agency:	MONTEREY COUNTY
RB Case Number:	1031
LOC Case Number:	Not reported
File Location:	Not reported
Potential Media Affect:	Other Groundwater (uses other than drinking water)
Potential Contaminants of Concern:	Gasoline
Site History:	Three gasoline tanks were removed in 1998 and petroleum hydrocarbons and fuel oxygenate compounds were detected in soil and groundwater underneath the site. Up to 12 monitoring wells have been installed since 1991. The site buildings were demolished in 1998 and the site was subsequently developed as a parking area. Approximately 200 cubic yards of contaminated soil were removed during the site demolition. Low concentrations of MTBE has been detected in downgradient off-site wells. A monitored natural attenuation has been performed at the site.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Date form received by agency: 09/01/1996
Facility name: SHELL OIL CO
Classification: Small Quantity Generator

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110023053345

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Commercial status unknown

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003
Waste name: A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Waste code: D004
Waste name: ARSENIC

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CHEVRON STATION NO 90657 (Continued) **1006805097**

Classification: Small Small Quantity Generator
Description: Handler: generates more than 100 and less than 1000 kg of hazardous waste during any calendar month and accumulates less than 6000 kg of hazardous waste at any time; or generates 100 kg or less of hazardous waste during any calendar month, and accumulates more than 1000 kg of hazardous waste at any time

Owner/Operator Summary:
Owner/operator name: CHEVRON PRODUCTS CO
Owner/operator address: P O BOX 6004
SAN RAMON, CA 94583
Owner/operator country: Not reported
Owner/operator telephone: (925) 842-5931
Legal status: Private
Owner/Operator Type: Owner
Owner/Op start date: Not reported
Owner/Op end date: Not reported

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): Unknown
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No
Off-site waste receiver: Verified to be non-commercial

Hazardous Waste Summary:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D018
Waste name: BENZENE

Violation Status: No violations found

Registry ID: 110013968812

Environmental Interest/Information System

Map ID	Site	Database(s)	EPA ID Number

CHEVRON STATION NO 90657 (Continued) **1006805097**

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
California Department of Toxic Substances Control EnviroStor System (DTSC-EnviroStor) is an online search and Geographic Information System (GIS) tool for identifying sites that have known contamination or sites for which there may be reasons to investigate further. The EnviroStor database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites.

Background Info:	A portion of the Site was occupied by an automobile junkyard from 1959 to 1964. In 1964, junk cars, scrap, and debris were removed and a retail plumbing, electrical, and sheet metal shop and lumbaryard were built in the former junkyard area. A lumber and hardware store and a furniture store once occupied the eastern and southern portions of the Site. Redevelopment plans for the site called for the construction of the Embassy Suites Laguna Grande Seaside Hotel, a 225-room hotel tower with ancillary commercial facilities designated in the building plan totaling 59,400 square feet. The remainder of the Site was planned to be a 162,500 square foot parking lot. The Redevelopment Agency of Seaside, in a letter dated February 28, 2003, indicated that a Reciprocal Parking and Easement Agreement (Agreement), will be executed by the Redevelopment Agency of Seaside, John Q. Hammons Hotels Two, L.P., and the City of Seaside, to use the Site for additional overflow parking only for a restaurant.

Environmental Interest/Information System

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Telephone:	916-557-7461
NPL Status:	Not Listed
RAB:	Not reported
CTC:	3664.47145843902
Current Owner:	OTHER

FUDS Description Details:

The site is located in Monterey County, California. After Department of Defense occupancy terminated, the property reverted back to the Monterey Peninsula Airport District who currently owns the site today. The site has conintuously been used as a mu
unicipal airport. Before being declared a FUD Site, two underground storage tanks (USTs) were removed and disposed of by the Monterey Peninsula Airport District (MPAD). Groundwater monitoring wells have been installed on- and off-site to determine th
he impact of POL and trichloroethene (TCE) contamination.

FUDS History Details:

The Navy leased the land in 1942 from MPAD. The Naval Air Station (NAS) was commissioned from the mid-1940s until March 1972 for use as an operable air station to support, operate and maintain aircrafts as well as train personnel during World War II.
. In 1946, full military use of the airport was determined to be excess, so joint and equal use of the landing facility was granted to the MPAD. The Navy maintained exclusive use of the aprons, hangar, repair shops, and storage tanks. In March 1972,
the original lease agreement was terminated. On 22 November 1983, in exchange for restoration payment of $8,850, the MPAD released the Navy from its lease. After the removal of several underground storage tanks (USTs) POL and TCE contamination were i
identified within the soil and groundwater.

Summary Details:

Conditions at proposal July 14, 1989): Fort Ord covers 46 square miles on Monterey Bay approximately 5.6 miles north of Monterey, Monterey County, California. The installation is bordered by the City of Marina and the Salinas River to the north, El Toro Creek to the east, Seaside and Del Rey Oaks to the south, and Monterey Bay to the west. Fort Ord was established in 1917 as a maneuver area and field artillery target range for units then stationed at the Presidio of Monterey. Its primary mission now is training. Industrial operations at Fort Ord include vehicle maintenance areas, a battery charging/repair facility, photographic processing laboratories, spray painting operations, a plastics shop, laundry/dry cleaning facilities, vehicle wash racks, and a small arms repair shop. Chemicals and ha ardous wastes were managed and disposed of at Fort Ord. According to tests conducted by the Army in 1986, elevated levels of contaminants were detected in off-base ground water. The contamination is emanating from the base and may be contaminating the drinking water supplies of the City of Marina; however, the exact location of the source has not yet been identified. The contaminants includecarbon tetrachloride, tetrachloroethylene, trichloroethylene, 1,1,1-trichloroethane, and trans-1,2-dichloroethylene. An estimated 38,600 people obtain drinking water from wells within 3 miles of ha ardous substances on the fort. Ground water is also used for irrigation. In addition, soil and ground water are contaminated at the Fire Drill Area, where approximately 600 gallons of petroleum products have been spilled. Fort Ord has identified at least 18 other contamination problems.Fort Ord is participating in the Installation Restoration Program IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from ha ardous materials. As part of IRP, theArmy is implementing a sampling plan to investigate ground water contamination. The Army is treating contaminated soil and ground water at nearby Frit sche Army Airfield Fire Drill Area. Status February 21, 1990): IRP activities continue.

Site Description: The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. Environmental investigations began at Fort Ord in 1984 under the Regional Water Quality Control Board (RWQCB) cleanup or abatement orders. In 1986, further investigations began at Operable Unit 2 (OU2). In 1990, Fort Ord was placed on the National Priorities List (NPL) because of Volatile Organic Compounds (VOCs) found in ground water beneath OU2. A Federal Facility Agreement (FFA) was signed in 1990 by the Army, U.S. Environmental Protection Agency, the California Environmental Protection Agency's Department of Toxic Substances Control (DSTC)

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and Regional Water Quality control Board (RWQCB). The FFA established schedules for commencing Remedial Investigations and Feasibility Studies (RI/FS). In 1991, the basewide RI/FS began and Fort Ord was placed on the Base Realignment and Closure list. The final FS for OU2 was completed on October 1, 1993, and the Record of Decision (ROD) was signed in August 1994. An Interim Action Plug-In ROD was signed in March 1994 for excavation and treatment of shallow contaminated soils. The Draft and Draft Final Versions of the Basewide RI/FS were completed in August 1994 and December 1994, respectively.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Del Rey Oaks to the south and Marina to the north. The Southern Pacific Railroad and Highway 1 pass through the western portion of former Fort Ord, separating the beachfront from the rest of the base. Laguna Seca Recreation Area and Toro Regional Park border former Fort Ord to the south and southeast, respectively, as well as several small communities such as Toro Park Estates and San Benancio.There are three main developed areas within Fort Ord: the Main Garrison, the East Garrison and Fritzsche Army Airfield (FAAF). The Main Garrison contains commercial, residential, and light industrial facilities. The East Garrison occupies 350 acres on the northeastern edge of the base and consists of military and industrial support areas, recreationalfacilities, and recreational open space. The FAAF serves as the general airfield for Fort Ord. EPA placed the site on the National Priorities List in 1990. Several areas of contamination exist on site. Generally, chemicals present in soil are the result of former routine maintenance and support activities on Fort Ord. Such activities include: maintenance of military vehicles at wash racks, tank storage of chemicals such as waste oil, the use of oil/water separators in drainage areas, and pesticide use and storage. The facility contained leaking petroleum underground storage tanks, containers of waste oil and various automotive chemicals, chemical storage areas, oil-waste separators, target ranges, and landfills. One on-site area is a 150-acre landfill that was primarily used to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Recordof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms target ranges. Over 12,000 acres are suspected of containing ordnance and explosives (OE). In particular, the 8,000 acre Multi-Range Area (MRA) is known to contain dangerous unexploded ordnance. OE investigations are complicated by technological limitations and protected habitat that covers the area and requires special management pursuant to the base Habitat Management Plan (HMP). This includes the current requirement to use prescribed burns to clear vegetation prior to OE removal. The HMP currently restricts burns to 800 acres/year, thus requiring at least 10 years to address OE in the MRA.The aquifers at the site are called the upper aquifer and the 180-foot aquifer. Approximately 40,000 people obtain drinking water from wells located within 3 miles of the site.Since opening in 1917, Fort Ord served as a training and staging facility for Army infantry troops. No permanent improvements were made until the late 1930s when administrative buildings, barracks, mess halls, tent pads, and a sewage treatment plant were constructed. The Main Garrison was constructed between 1940 and the 1960s, starting in the northwest corner of the base and expanding southeastward. The FAAF was incorporated into Fort Ord in 1961. Since 1917, portions of the Installation were used by infantry units for maneuvers, target ranges, and other purposes. Ordnance and explosives (OE) that have been fired into, fired upon, or used on the facility include artillery and mortar projectiles, rockets

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

and guided missiles, rifle and hand grenades, practice land mines, pyrotechnics, bombs, and demolition materials. A wide variety of conventional OE items have been located at sites throughout the former Fort Ord, including pyrotechnics and explosives.Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented in preparation for transfer and reuse of former Fort Ord property. The Ord Military Community, located within the Main Garrison portion of former Fort Ord, will be retained by the Army. Since base closure in September 1994, lands outside the Ord Military Community have been subjected to the reuse process. Some of the property on the installation has been transferred. A large portion of the Inland Training Ranges was assigned to the Bureau of Land Management (BLM). The other major recipient of Fort Ord property has been the California State University (CSU) system. The CSU Monterey campus is located on the site of the former Fort Ord and is expected to expand in the future. Other areas on the installation have been or will be transferred to federal, state, local, and private entities through economic development conveyance, public benefit conveyance, negotiated sale, or other means.The reuse of the former Fort Ord following transfer of property increases the possibility of the public beingexposed to explosive hazards. In November 1998, the Army agreed to evaluate OE at former Fort Ord in an OE Remedial Investigation/Feasibility Study (RI/FS) consistent with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). A Federal Facility Agreement (FFA) was signed in 1990 by the Army, EPA, and the California Environmental Protection Agency's Department of Toxic Substances control (DTSC; formerly the Department of Health Services or DHS). The FFA established schedules for performing remedial investigations and feasibility studies and requires that remedial actions be completed as expeditiously as possible. In April 2000, an agreement was signed between the Army, EPA and DTSC to evaluate OE at theformer Fort Ord subject to the provisions of the Fort Ord FFA.EPA OU-01: Fritzsche Army Airfield Fire Drill AreaAn investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wassigned in September 1995. Groundwater cleanup standards were established in the ROD which must be met through the existing pump and treat system. The selected remedy is consistent with the initial action described above. The groundwater treatment system was installed in 1988. In 2004, the Army awarded a fixed price contract for the management and completion of the groundwater cleanup remedy at Operable Unit 1.EPA OU-02: Fort Ord LandfillOne on-site area is a 150-acre landfill that was primarilyused to dispose of residential waste, as well as small amounts of commercial waste generated by the base. The north landfill covers approximately 30 acres and has residences nearby. Pursuant to a Record of Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed.The north landfill was used from 1956 to 1966. The main landfill was operated from 1960 until 1987 when disposal was ceased due to interim closure of the facility. During operation of the base, both landfills were used for disposal of residential and commercial waste, including dried sewage sludge, construction debris, and small amounts of chemical waste (such as paint, oil, pesticides, electrical equipment, ink, and epoxy adhesive). Waste received at the landfills was placed in trenches approximately 30 feet wide, 10 to 15 feet apart, and 10 to 12 feet below ground surface. In 1994, the Army completed an investigation focusing on groundwater andsoil contamination originating from the landfill. A Record of Decision (ROD) was signed in August 1994. The ROD included capping the landfill and installing a groundwater pump and treatment system. Construction of the groundwater treatment system is complete and is operational.In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

provide more clean land for re-use. The changes are documented in the Explanation of Significant Differences (ESD) in August 1996.The consolidation is complete and capping of the main landfill was completed in December 2002. The Army has installed an active landfill gas extraction and treatment system to capture and remediate methane andother volatile organic compound gases that are being generated by decaying materials in the landfill. The Army continues to monitor landfill gases to ensure that do not pose a health hazardEPA OU-03: Overall SiteIn 1990, the Army began further investigations into the nature and extent of on- and off-site soil and groundwater contamination, as well as any ecological or health threats that may be present. The investigation identified three waste disposal sites, firing ranges, and a vehicle maintenance area that require extensive cleanup actions. The Army completed the RI/FS and ROD in 1997, and all soil cleanup actions are complete, and groundwater pump and treatment systems are operational. The action included remediating the Sites 2/12 maintenance/disposal area by soil excavation and ongoing groundwater remediation, Sites 16/17 disposal area by soil excavation, Site 31 disposal area by soil excavation, and Site 39 small arms ranges by soil excavation. Most of the excavated soils were placed at the Fort Ord Landfill, which was closed in December 2002. The Army is currently evaluating treatment/disposal options for additional Site 39 soils to be excavated.Site 39, which includes the Multi-Range Area (MRA), was reportedly used sincethe early 1900s for small arms training and ordnance training exercises, including onshore naval gunfire. Over the years, in addition to small arms rounds, various types of ordnance have been used or found in the MRA, including hand grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, petroleum hydrocarbons, and other metals associated with training activities. Ordnance is being addressed through other remedial or removal actions.Site 39 comprises approximately 8,500 acres in the southern portion of Fort Ord. Site 39 is bounded byEucalyptus Road to the north, Barloy Canyon Road to the east, Boundary Road and South Boundary Road to the south, and General Jim Moore Blvd to the west.Results of the RI indicate the metals lead and beryllium, explosive compounds, and organic compounds are present in shallow soil above background concentrations in localized areas at Site 39, and are associated with past military training activities.Spent ammunition found at the Small Arms Ranges consists of bullets, black powder rifle balls, and lead shot. Lead is the primary chemical of concern in soil at the Small Arms Ranges at Site 39. In localized areas, spent ammunition is found on the ground surface.An Explanation of Significant Differences addressing OU 3 was completed in December2003.EPA OU-04: Surface SoilsEPA OU-05: No Action SoilsEPA OU-07: Site 3 Beach RangeSite 3 is situated within about 3.2 miles (780 acres) of dunes along the coastline of Monterey Bay at the western boundary of Fort Ord. Results of the investigation indicate lead from small arms is the main contaminant at the site. The site is also home of the Smith's Blue butterfly, an endangered species, and buckwheat plants which the butterflies use to lay their eggs on. In 1997, the Army completed a ROD allowing them to first clean up the lead contamination to address human health concerns by soil excavation and placement in the Fort Ord Landfill, which was simultaneously being remediated (capped). This cleanup was completed in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well.EPA OU-08: OE Track 0 (No Further Action)The Track 0 process addresses single or grouped areas of land at the former Fort Ord that have no history of OE-related use and for which No Action is necessary to protect human health and the environment. These areas consist largely of land that has been developed for military support or residential use throughout Fort Ord's history and areas

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

that have no physical or documented evidence of OE-related training. A Track 0 Special Case area includes a former landfill where OE scrap items were found buried with refuse. No OE-related activities occurred in the area and the OE scrap items and the refuse were entirely removed.Track 0 areas were grouped geographically: e.g., all non-OE land in the Main Garrison was grouped and discussed together as one area. Track 0 includes parcels in the following areas:- Highway 1 Area- Golf Course Maintenance Area- Brostrom Park Area- Patton/Abrams Park Housing Area- Open Space, Main Entrance Area- Surplus II Area- Fritzsche Army Airfield Area- East Garrison Area- Main Garrison Area- OU 2 Landfill Area- Reservation Road AreaTrack 0 sites were addressed by a No Further Action Record of Decision (ROD) dated July 2, 2002.The Army has been conducting military munitions sampling and removal actions at identified Munitions Response Sites (MRS) and will continue these actions to mitigate imminent MEC-related hazards to the public while gathering data about the type of military munitions and level of hazard at each of the sites for use in the base-wide MR RI/FS. The Army is performing its activities pursuant to the President's authority under the CERCLA Section 104, as delegated to the Army in accordance with Executive Order 12580 and in compliance withthe process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will continue to be involved. The Army is preparing the MR RI/FS for Fort Ord to address MEC-related hazards. The MR RI/FS will review and evaluate past investigative and removal actions, as well as recommend future response actions deemed necessary to protect human health and the environment on the basis of proposed reuses specified in the Fort Ord Reuse Authority (FORA) Reuse Plan.The information to be evaluated during the MR RI/FS will include site knowledge, the quality of the available information,work completed, and intended future land uses. The base-wide MR RI/FS will contain a comprehensive evaluation of all MEC-related data for the entire former Fort Ord and will evaluate long-term response alternatives for cleanup and risk management ofMEC.The MR RI/FS is organized as a "tracking" process whereby sites with similar characteristics will be grouped to expedite cleanup, reuse, and/or transfer based on current knowledge. The Track 0 Record of Decision (ROD) addresses areas on the former Fort Ord that have been identified as requiring no munitions response to protect human health (public safety) and the environment (Track 0 areas). Other Track (1 through 3) areas will be addressed separately for the other lands that have or are suspected to have a history of military munitions-related use and investigations completed to date. Track 1 sites were suspected to have been used for training with military munitions but for which no further response action is required because they fall into one of the three categories defined in Record of Decision, No Further Action Related to Munitions and Explosives of Concern-Track 1 Sites; No Further Remedial Action with Monitoring for Ecological Risks from Chemical Contamination at Site 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are known or suspected to be present, but MEC investigations have not yet been completed.All base-wide MR RI/FS documents have been or will be prepared in cooperation with the EPA and DTSC in accordance with the Fort Ord FFA; made available for public review and comment; and placed in the Administrative Record and local information repositories.A ROD addressing OU 8 was completed in 2002. An Explanation of Significant Difference (ESD) pertaining to the OU8 ROD was completed in April of 2005.EPA OU-09: OE Track 1Track 1 sites are sites where munitions and explosives of concern were suspected but no further remedial action was deemed necessary to protect human health and the environment. The Track 1 Proposed Plan was issued for public comment on September 15, 2004 and

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

the ROD is scheduled to be signed in 2005.EPA OU-10: OE at Ranges 43-48, Range 30A, and Site OE-16Ranges 43-48 cover approximately 498 acres to the south of Eucalyptus Road in the south-central portion of the former Fort Ord. The majority of the site is designated as habitat reserve and will remain undeveloped (473 acres), and a limited portion of the site (25 acres) will be developed and reused.These ranges were part of the former Fort Ord's Multi-Range Area (MRA) and are categorized as firing ranges where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Ranges 43-48 mainly consists of central maritime chaparral (CMC)with some grassland areas.Training facilities maps indicate these ranges were used for a variety of live fire exercises from the 1940s through the 1990s. Records and recent field investigations indicate the ammunition used at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitank weapon (LAW); small arms; practice anti-personnel mines; dragon guided missiles; practice claymore mines; and fragmentation hand grenades.The former firing ranges contain sensitively fuzed, highly dangerous OE present on the ground surface or at shallow depths below the ground. As described above, numerous types of OE ranging from hand grenades to 90mm recoilless rifle rounds are known or suspected to be on the site. During recent limited surface removals in 2001, thousands of OE items were recovered at Ranges 43-48.This Interim Action site is adjacent to (less than 4,000 feet from) residential neighborhoods at Ord Military Community (Fitch and Marshall Parks) and is near the City of Seaside. The Fitch and Martin Luther King Jr. Middle Schools are located less than a mile from Ranges 43-48. Existing site security measures include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In the last three years, five documented incidents of persons trespassing into the Ranges 43-48 site occurred. In 1999, there were two documented cases of children entering the fenced MRA at Ranges44 and 45, and collecting and removing 40mm practice grenades found on the ground surface. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The majority of this Interim Action site is designated as habitat reserve and will remain undeveloped. Future reuse of Transfer Parcel E21b.3 is development.Range 30A includes approximately 388 acres located in the southeastern portion of the MRA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerFort Ord MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Vegetation at Range 30A mainly consists of CMC with somegrassland areas.Range 30A was constructed in 1990 as a 40mm machine gun range and was in use until 1993. According to the Fort Ord Training Ranges Standard Operating Procedure (SOP), the only weapon authorized for use at Range 30A from 1991 and 1992was the MK19 40mm machine gun, Mod 3. Ammunition authorized for use at Range 30A included HE, high explosive dual purpose (HEDP) and target practice (TP).Range 30A is known to contain sensitively fuzed, highly dangerous 40mm grenades and evidence of60mm and 81mm mortars and 37mm, 75mm, 155mm, and 8-inch projectiles. Limited surface removals in 2001 in the accessible areas of Range 30A have recovered hundreds of whole or partial OE and OE scrap items.The Range 30A Interim Action site is locatedin close proximity (approximately 2,200 feet north) to the Laguna Seca residential area and Laguna Seca Golf Course, and less than a mile from the Laguna Seca Raceway.

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

South Boundary Road, located approximately 2,000 feet to the south, is open to vehicular traffic during events at Laguna Seca Raceway and is always open to the public for jogging, hiking, and biking. This range was part of the former Fort Ord's MRA and is categorized as a firing range where personnel were trained in the use of live ammunition. The MRA is fenced and posted with signs warning of the dangers associated with OE. Existing access deterrents include: four-strand barbed-wire fencing with one to two rolls of concertina wire behind it, chain link gates reinforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), and three other incidents of fence damage were reported within 4,000 feet of the range (near Range 29). Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.As part of the closure of the former Fort Ord, the MRA will be transferred to the BLM and most of the MRA will remain undeveloped as habitat reserve. The habitat management plan (HMP) presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.Site OE-16 includes approximately 80 acres located immediately north of the former Fort Ord MRA, between Eucalyptus and Parker Flats roads and bounded by Watkins Gate Road to the east (Plate 5). This site will become habitat reserve and will remain undeveloped. The Bureau of Land Management (BLM) land (immediately adjacent) is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence. The site is posted with signs warning of the dangers associated with unexploded ordnance. Vegetation at Site OE-16 mainly consists of CMC with some grassland areas.Site OE-16 is a World War II (WWII) era rocket range, and is identified as a "bazooka practice" area on Fort Ord Training Facilities maps dating from 1945 and 1946. Available training maps after 1946 do not identify the bazooka practice area. According to Fort Ord Range Control, this range was probably used as an antitank rocket range during and shortly after WWII. Available information indicates that Site OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site was later used for a portion of time as an anti-armor training area. Evidence from the site indicates that both practice and HEAT rounds were used.Site OE-16 contains sensitively fuzed, highly dangerous OE, such as HEAT projectiles, present on the ground surface or at shallow depths below the ground. During recent limited surface removals in 2001, hundreds of OE items, including expended and live 2.36-inch rockets (practice and HEAT), practice antitank mines, rifle grenades, hand grenade fuzes, and OE scrap were recovered.Site OE-16 is located adjacent to the MRA and land that has been transferred to the BLM. The BLM land is open to the public for hiking, biking, jogging, and horseback riding. Site OE-16 is surrounded by a temporary 6-foot high chain linked fence posted with signs warning of the dangers associated with unexploded ordnance. The site is in close proximity to a residential neighborhood (Fitch Park) on the former Fort Ord. In 2001, an incident of persons trespassing withinthe MRA adjacent to Site OE-16 was reported. In addition, five incidents of trespassing into the MRA adjacent to Site OE-16 occurred within the last three years. Although no one was injured in these incidents, it substantiates the premise that fences posted with warning signs deter, but do not prevent entry.The land that includes Site OE-16 will be transferred to the BLM and will remain undeveloped as habitat reserve. The HMP for former Fort Ord presents the revised boundaries of the habitat reserve areas and describes special land restrictions and habitat management

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

requirements for target species within the reserve areas. Management of the habitat reserve area will fall under the jurisdiction of BLM.An Interim Action Record of Decision addressing OE at EPA OU-10 was signed in September 2002.The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acres was burned. The Army is studying the October 2003 burn to understand both what went right and what went wrong. Ordnance has been cleared from the surface of the entire burned area and subsurface clearance is ongoing. The next prescribed burn is scheduled to take place in 2005.OU-10 Track 2 Sites:Track 2 sites are sites where munitions and explosives of concern were found and a removal action was conducted to clean it up. The first of several Track 2 RI/FS reports is due to be issued in 2005 for the area of Fort Ord known as Parker Flats.EPA OU-11: OE Track 3Track 3 sites are sites where munitions and explosives of concern are known to be present but no cleanup has been conducted yet. The final Track 3 ROD is expected to be completed by 2007, with UXO cleanup work continuing for at least 10 years thereafter.EPA OU-12: Carbon Tetrachloride PlumeThe Army has initiated a remedial investigation/feasibility study of another area of groundwater contamination, the so-called "carbon tetrachloride plume operable unit", near the City of Marina. Contaminants slightly above regulatory standards have been found in offsite groundwater. This area of contamination is not being used for drinking water. Potential source areas are also being investigated. A soil vapor sampling and extraction system pilot study was conducted in 2004 to address the vadose zone above the carbon tetrachloride plume area. The pilot study was very successful and appears to have removed significant mass from the vadose zone. The Army expects to complete the draft Remedial Investigation/Feasibility Study Report for the carbon tetrachloride plume operable unit in 2005.OU 9:A list of the 21 Track 1 sites for which No Further Action Related to MEC is required is comprised of:MRS-1-Flame Thrower Range: The site is 25 acres in size, and is located in the northwestern part of former Fort Ord. MRS-1 is currently occupied by housing. Proposed reuse plans include residential development. Based on the literature review and sampling, the site appears to have been used for camouflage training, mine and booby trap training, non-firing mortar training, and flame thrower training. Most of this area has been used for military housing for over 40 years.MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housing. The site is currently undeveloped with proposed reuse plans to include development with reserve areas or development with restrictions. Review of training maps, aerial photographs, and other Fort Ord maps indicate mine and booby trap training occurred at the site. The adjacent areas have been used as a school and military housing for over 40 years.MRS-13A-Practice Mortar Range: The site is 61 acres in size, and is located in the northern portion of the former Fort Ord. Proposed reuse plans for MRS-13A include residential development and a park. The majority of the site has contained residential housing for nearly 30 years. The area was extensively graded in the 1970s and housing was built on portions of the site. The western portion of the site was used as a landfill in the 1960s. All landfill material in the western portion of MRS-13A was excavated (removed) and transported tothe main landfill south of Immix Road in the 1990s. Several munitions debris items and three unexploded ordnance (UXO) items were identified within and adjacent to MRS-13A during landfill excavation and housing development grading activities and were removed: three live ground signals and loose pyrotechnic material; three inert hand grenade primer detonators; two inert 40mm signal cartridges; an inert fin assembly for a 3.5-inch rocket; a live rifle grenade; miscellaneous projectiles; and two inert 3.5-inch rocket motors.MRS-20-Recoilless Rifle Training Range: The site is 7 acres in size, and is located in the southwestern portion of the Main Garrison near residential housing and Highway 1. This site is currently open space with

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

proposed reuse plans, which include development. The site was identified as a potential Recoilless Rifle Training Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in some cases, could be fired by either method.MRS-22 (Site 3)-Beach Trainfire Ranges: The site is 952 acres in size, and is located on the Monterey Baycoastline along the western margin of former Fort Ord as shown on Plate 2. The site is currently open space with the proposed reuse of the site to include a State park with open space and recreational areas. Training maps, aerial photographs, and interviews indicate the site was used as the Beach Trainfire Ranges from 1940s until base closure in 1994. The ranges contained 17 small arms firing ranges; an obstacle course; a bivouac area; a rifle instruction circle; a bayonet assault course; chemical, biological, and radiological (CBR) training areas; target detection training areas; an infiltration course; and a former ammunition supply point. CBR training at MRS-22 (Site 3) only involved training troops in the identification of targets while wearing gas masks, and did not involve the use of chemical, biological or radiological materials. Training at the Beach Trainfire Ranges reportedly also included occasional practice mortar use with inert training devices, amphibious assault landings, and battle demonstrations.MRS-24B-Practice Hand Grenade Range: The site is 14.2 acres in size, and is located in the west-central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the Impact Area. MRS-24B will continue to be used for military housing. Historical and sampling information indicate the site was used as practice hand grenade range in the 1940s.MRS-24D-Booby Traps: The site is 1.8 acres in size, and is located in the west central portion of former Fort Ord that contains military residential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as a "Booby Traps" and squad patrol training area based on review of a 1946 historical map; however, the site boundary was northwest of the area shown as "Booby Traps" on 1945 and 1946 training maps.MRS-24E-Practice Rifle Grenade Range: The site is 2.7 acres in size, and is located in the west central portion of former Fort Ord. The site is also located south of the Main Garrison and just north of the former Impact Area within a military housing complex. MRS-24E will continue to be used for military housing. MRS-24E was identified as a Practice Rifle Grenade Range on 1945/1946 training maps, but no evidence of this use was discovered during sampling at the site.MRS-27X-Training Site 24: The site is 79.5 acres in size, and is undeveloped open space located in the southeastern portion of former Fort Ord. MRS-27X is currently a habitat reserve area managed by the Bureau of Land Management (BLM), and is open to the public for recreational use. Based on review of Fort Ord training maps, the site was used as a troop training and maneuver area from the 1950s to 1970s, and as an overnight bivouac area and medical training area in the 1980s.MRS-27Y-Training Site 25: The site is 25 acres in size,and is mainly undeveloped open space located in the eastern portion of former Fort Ord along Inter-Garrison Road. A small portion of the site also lies on property that was transferred to California State University Monterey Bay in 1995 for development. The site was identified as one of 26 training sites within Fort Ord Training and Maneuver Areas used as troop training, maneuver, and overnight bivouac areas.MRS-32A-Oil Well Road Training Area: The site is 38 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as atank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and as a troop training and

Map ID	Site	Database(s)	EPA ID Number
	USARMY FORT ORD (Continued)		**1000393341**

maneuver area from 1950s to 1980s.MRS-32B-Oil Well Road Training Area II: The site is 47 acres in size, and is located in the southeastern portion of former Fort Ord, surrounded by undeveloped open space. Proposed reuse plans for MRS-32B include maintaining the land as habitat reserve. Based on historical training maps (circa 1954 and 1956), it was identified as the "Oil Well Road Training Area"; a portion of the site was reportedly used as a Tank Gunnery Range in 1950s; and the site may also have been used for firing of shoulder-launched projectiles.MRS-39-Mine and Booby Trap Area: The site is 12.1 acres in size, and is located east of General Jim Moore Boulevard and south of Gigling Road in the Marshall Park housing area. MRS-39 will continue to be used for military housing. The site was identified as a Mine and Booby Trap Training Area on 1957/1958 maps.MRS-49-Former Rifle Grenade Range: The site is 28 acres in size, and is located in the west central portion of former Fort Ord, south of Main Garrison and just north of military housing. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a training area and rifle grenade range in the 1940s and 1950s based on interviews conducted during the Preliminary Assessment/Site Inspection (PA/SI) phase of the Fort Ord Archive Search.MRS-59A-Unnamed: The site is 41 acres in size, and is located in the eastern portion of former Fort Ord near the East Garrison and MRS-5. The site is currently undeveloped and proposed reuse plans include development. The site was identified as a possible 2.36-inch rocket range during interviews conducted during the PA/SI phase of the Fort Ord Archive Search. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps.MRS-62-Laguna Seca Open Space: The site is 247 acres in size, and is located at the southern end of former Fort Ord. The site is currently open space andproposed reuse plans include development. The site was identified as a small arms and flare training area during an interview with a former Fort Ord Fire Chief conducted during the PA/SI phase of Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, the site was used as a troop training and maneuver area from the late 1940s through 1980s; and the southern half of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-62 lies within a larger area identified during interviews conducted as part of the Archives Search as "Area T" and was a described as a general area where training may have occurred. The boundary of MRS-62 is based on transfer parcel delineation and not on evidence of munitions use. The boundary of MRS-62 was established to correspond to with disposal Parcel L20.6. Although the size of the parcel to be transferred has changed over time, the boundary of MRS-62 corresponds with the current boundary of Parcel L20.6.MRS-63-Canyon Training Area: The site is 28 acres in size, and is located at the southern end of former Fort Ord east of MRS-62. MRS-63 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as a small arms and flare training area during the PA/SI phase of the Fort Ord Archive Search. Based on review of training maps, aerial photographs, and site reconnaissance, most of the site was included in a "Noise Buffer Zone" from 1978 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators.MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majority of the site lies on property transferred to California State University Monterey Bay (CSUMB) that is currently used for student housing or is proposed for development. A small portion of the site lies on property that is designated as habitat reserve. The site was identified as a reported signal corps field training area during the PA/SI phase of Fort Ord Archive Search, and other uses included aviation

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

training, basic unit training, and a bivouac area from 1950s until housing construction in 1989.MRS-69-Unnamed: The site is 37 acres in size, and is undeveloped open space located on the eastern side of former Fort Ord. MRS-69 is currently a habitat reserve area managed by the BLM, and is open to the public for recreational use. The site was identified as an area of possible rifle grenade use based on interviews with a former Fort Ord Fire Chief. This site is within land transferred to the BLM and is open to the public for hiking, biking, and horseback riding. Use is limited to marked trails. The public has had access to this area for approximately 6 years.MRS-70-Unnamed: The site is 14 acres in size, and is located on the southeastern side of former Fort Ord, south of Oil Well Road. The site is currently a habitat reserve area managed by BLM, and is open to the public for recreational use. The area encompassing MRS-70 was identified as containing firing berms based on interviews with a former Fort Ord Fire Chief.A ROD addressing OU 9 was completed in April 2005.Operable Unit 2:The Fort Ord Landfills area was designated as Operable Unit 2 (OU2) when a remedial investigation identified the presence of volatile organic compounds (VOCs) associated with landfilled materials in groundwater beneath the site. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated groundwater and ongoing remediation of groundwater associated with OU2 is being conducted in accordance with the OU2 Record of Decision (ROD) and the Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD).In accordance with the OU2 ROD and the Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills, the Army completed removal and consolidation of refuse from the north landfill into the main landfill in October 1998 and installation of an engineered cover system for the main landfill in December 2002 as part of the closure process for the Fort Ord Landfills.At the Fort Ord Landfills, the perimeter fence line was initially designated as the boundary for landfill gas (LFG) compliance monitoring in accordance with applicable or relevant and appropriate requirements (ARARS) and LFG monitoring probes were installed inside the fence line. Monitoring of these probes commenced in June 2000. Fixed-based laboratory results and field measurements showed methane concentration exceeding the 5% regulatory standard in most probes. The Army performed an additional investigation in August 2000 and sampling results showed that methane was detectable extending out about 70 feet front the fence line on the east side of Area F. All probes were monitored again in September and December 2000, with the results again showing methane concentrations exceeding the 5% standard. In response the Army installed additional probes at locations around the outer parts of the OU2 property beyond the fence line in April and May 2001. Analytical results for these probes indicated that methane concentrations at the property boundary were less than the 5% standard, with the exception of the east side of Area F.The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volatile organic compounds (VOCs) in air between the Fort Ord Landfills and the nearest housing. These data were used to complete a screening levelhuman health risk assessment (HHRA) for nearby residences. The HHRA was updated after each monitoring event and attached as an appendix to each ambient air monitoring report. The HHRA concluded that there is a health risk for long-term exposure to VOCs in ambient air; however, the Army determined the data evaluated in the HHRA were limited and additional monitoring would be appropriate. Additional ambient air monitoring was conducted on a quarterly basis in 2003 and the HHRA updated to include these data and evaluate specifically landfill-related risk. The updated HHRA indicated the Fort Ord Landfills are not a significant contributor of VOCs

USARMY FORT ORD (Continued) **1000393341**

in ambient air or risk to downwind receptors.The following remedies for the Fort Ord Landfills were selected in the OU2 ROD:- A cover system to (1) prevent rainwater from percolating through the landfilled areas into the underlying aquifers; (2) collect and remove methane offgas (if necessary); and (3) prevent exposure of sanitary waste in the landfills to the surrounding environment.- Institutional controls (i.e., deed restrictions) to be placed on the property to ensure that the integrity of the cover system is maintained and prevent potential direct exposures of VOCs to the environment or people associated with future use of the site.- Institutional controls (i.e., deed restrictions) that prevent the use of groundwater within the contaminant plume.- Groundwater extraction and treatment, to be monitored on a regular basis and adjusted as warranted by the performance data collected during operation. Additionally, treated groundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface.Three previous ESDsto the OU2 ROD have been completed:- Explanation of Significant Differences, Operable Unit 2, Fort Ord Landfills (OU2 ESD). The OU2 ESD finalized the cleanup standard for the Upper 180-foot Aquifer to be consistent with those of the A-aquifer to facilitate the coordinated cleanup strategy for both aquifers. - Explanation of Significant Differences, Area A, Operable Unit 2, Fort Ord Landfills (Area A ESD). The Area A ESD addressed excavation and consolidation of refuse from the north landfill (Area A) into the main landfill (Areas B through F).- Explanation of Significant Differences, Consolidation of Remediation Waste in a Corrective Action Management Unit, Operable Unit 2, Fort Ord Landfills (CAMU ESD). The CAMU ESD addressed using remediation waste as foundation layer material instead of "clean" (uncontaminated) soil as described in the OU2 ROD.An additional ESD addressing OU2 was completed in October of 2006.The Former Fort Ord is located near Monterey Bay in northwestern Monterey County, California, approximately 80 miles south of San Francisco. The base comprises approximately 28,000 acres adjacent to the cities of Seaside, Sand City, Monterey, and Delof Decision (ROD), this 30 acre portion was clean-closed. The main landfill covers approximately 120 acres that have not been developed. Other areas include a former fire drill area, motor pool maintenance areas, small dump sites, and small arms tarsives. Since the base was selected in 1991 for base realignment and closure (BRAC) and was officially closed in September 1994, site visits, historic and archival investigations, OE sampling, and removal actions have been performed and documented informer Fort Ord subject to the provisions of the Fort Ord FFA. EPA OU-01: Fritzsche Army Airfield Fire Drill Area An investigation into the nature and extent of contamination in the Fritzsche Army Airfield practice fire area began in 1984. The ROD wter treatment system is complete and is operational. In May 1995, the Army proposed to consolidate wastes from several areas around the main landfill which will provide more clean land for re-use. The changes are documented in the Explanation of Signd grenades, mortars, rockets, mines, and artillery rounds. The remedy for Site 39 as described in the Remedial Investigation (RI) Sites Record of Decision (ROD) addresses lead contamination at the Small Arms Ranges, as well as explosive compounds, p in 2000, with the dunes being re-contoured and re-vegetated. The Army is finalizing a post-cleanup ecological risk assessment which suggests the initial cleanup is protective of ecological species as well. EPA OU-08: OE Track 0 (No Further Action)the process set out in CERCLA Section 120. Because this is a National Priority List (NPL) site, the Army and EPA jointly select remedial actions including No Action determinations. Therefore, regulatory agencies (EPA and DTSC) have been and will contite 3 (MRS-22); Former Fort Ord, California (Track 1 ROD). Track 2 sites are areas at the former Fort Ord where MEC items were present, and MEC removal actions have been completed. Track 3 sites are areas at the former Fort Ord where MEC items are kned at these ranges included 4.2-inch, 60mm, and 81mm mortars; 14.5mm subcaliber projectiles; 35mm

USARMY FORT ORD (Continued) **1000393341**

subcaliber rockets; 90mm recoilless rifle rounds; 84mm high explosive antitank (HEAT) projectiles; 40mm high explosive (HE) grenades; 66mm light antitanA, approximately 1,500 feet north of South Boundary Road and to the west of Barloy Canyon Road. The Interim Action site was identified based on the presence of 40mm HE projectiles and is designated as habitat reserve. Range 30A is part of the formerforced with concertina wire, and warning signs posted approximately every 500 feet along the fencing. In 2001 alone, two incidents of damaged fencing that may have been caused by trespassers occurred within 2,000 feet of Range 30A (near Range 30), an OE-16 had been used for training and live fire exercises from approximately the 1940s until the time the base was officially closed in 1994. Practice and HEAT rockets and rifle grenades were used in the 1940s and possibly the early 1950s. The site wd of Decision addressing OE at EPA OU-10 was signed in September 2002. Operable Unit 10: MRS-3 Based on the MRS-3 sampling results, a MEC removal to four feet bgs was recommended per the Final Phase I Engineering Evaluation/Cost Analysis (Phase I E MEC items were removed. In addition, 293 items were removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Most of the items found at MRS-4B were consistent with the reportt MRS-13B at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from burial pits included grenade and mine fuzes, firing devices, pyrotechnics (signal, illumination and smoke), rockets, rifle and hand smoke grenades, blasting caps,items found within MRS-27G were generally of the types associated with overnight bivouac training sites and general maneuver areas. Within MRS-27G's boundaries a small number of 75 millimeter (mm) and 37mm items were removed, inspected and determinedemoval to four feet bgs. This MRS was subsequently subdivided into 240 100- X 100-foot removal grids. An investigation for MEC was conducted using the Schonstedt Model GA-52/Cx magnetometer, with all detected MEC removed. 50 MEC items were removed. lere removed. In addition, 149 pounds of debris was removed, inspected and determined not to pose an explosive hazard; these items were classified as MD and were disposed or recycled. Of the 26 MEC items recovered, 2 munitions (a MK I 75mm Shrapnel prtems were non-penetrating (e.g., pyrotechnics, grenades, and grenade and projectile fuzes) munitions. The penetrating military munitions found included projectiles, rifle grenades, and rockets. Both DMM and MD were found in numerous burial pits thatated all detected anomalies at 52 100- X 100-foot grids using a Schonstedt Model GA-52/Cx magnetometer. During this investigation, 19 MEC items were removed. In addition, 453 pounds of debris was removed, inspected and determined not to pose an exploal pits were discovered during the removal conducted at MRS-53. Both DMM and MD were found in burial pits at depths ranging from a few to 48 inches bgs. The DMM and MD recovered from these pits included fuzes (grenade, mine, time, and projectile), sich 1998, 23 100- X 200-foot grids were identified at MRS-55. Subsequently, 19 of these grids were surveyed using a Schonstedt Model GA-52/Cx magnetometer with a maximum search lane width of 5 feet. Following the survey, anomalies were selected for in). Other sources of future land use information include public benefit conveyance, negotiated sale requests, transfer documents, and the Installation-Wide Multispecies Habitat Management Plan for Former Fort Ord, California. The Reuse Plan identifiedin ground disturbing activities (e.g., during construction/excavation). A ROD addressing Operable Unit 10 was completed in August 2008. The first prescribed burn took place on October 24, 2003. The burn escaped the initial boundaries and 1000 acresm Action in the Record of Decision, Interim Action for Ordnance and Explosives at Ranges 43-48, Range 30.A, and Site OE-16, Former Fort Ord, California (Interim Action ROD; .Army, 2002), and the implementation of MEC remediation under the Interim Acton tetrachloride (CT) detected in three different aquifers up to 550 feet below ground surface (bgs). No records exist to indicate exactly when, how often, or how much CT may have been used, stored, or disposed of; however, by delineating

the areas od by the Marina Coast Water District (MCWD) and is pumped from wells that are located east of the OUCTP area screened in the Lower 180-Foot Aquifer. Based on groundwater monitoring data and data provided by the MCWD, these drinking water wells have nnd flame thrower training. Most of this area has been used for military housing for over 40 years. MRS-6-Mine and Booby Trap Training Area: The site is 2 acres in size, and is located in the northwest portion of former Fort Ord near residential housTraining Range and was reportedly used for various training activities including recoilless rifle, machine gun, and other unknown types of training. Recoilless rifles are portable antitank weapons that were either shoulder- or ground-fired, and in soesidential housing. The site is also located south of the Main Garrison and just north of the former Impact Area. MRS-24D will continue to be used for military housing The site was identified as aBooby Traps and squad patrol training area based on revied reuse plans for MRS-32A include maintaining the land as habitat reserve. Based on training maps and interviews, the site may have been used as a tank gunnery range in 1950s, for training with shoulder-launched projectiles in 1950s and 1960s, and a. The site appears to have been used for/or been within the downrange area of small arms ranges from the 1930s until base closure in 1994. No training areas where military munitions would be used were identified on historical training maps. MRS-62-L78 to 1987, where no firing of ammunition was allowed, including pyrotechnics, explosives, or simulators. MRS-66-Signal Corps Small Arms: The site is 41 acres in size, and is located in the northeastern portion of former Fort Ord Plate 2. The majoritsite. Based on frequency of detection and measured concentrations, trichloroethene (TCE) was the most significant groundwater contaminant detected during the remedial investigation. Remedial actions have been implemented to address contaminated grounof Area F. The Army also performed ambient air monitoring in October 2000, November 2000, September 2001 and September 2002 to determine landfill gas dispersion in ambient air on the east side of Area F. The results showed trace concentrations of volroundwater will be discharged to the A-aquifer and Upper 180-foot aquifer by means of recharge systems or reused at the surface. Three previous ESDs to the OU2 ROD have been completed: - Explanation of Significant Differences, Operable Unit 2, Fort O

Waste code:	D001
Waste name:	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Waste code:	D002
Waste name:	A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.
Waste code:	D003
Waste name:	A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES

Map ID	Site	Database(s)	EPA ID Number

USARMY FORT ORD (Continued) **1000393341**

WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

SECTION 4 - EPA WASTE CODES

There are no epa codes to report for this search area.

Section 5

Databases Searched and Update Dates

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/01/2009
Date Data Arrived at EDR: 01/14/2010

Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994
Number of Days to Update: 56

Source: EPA

Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 06/30/2009

Last EDR Contact: 02/09/2010
Next Scheduled EDR Contact: 04/12/2010
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 06/23/2009
Date Data Arrived at EDR: 09/02/2009

Data Release Frequency: Quarterly

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

Date of Government Version: 11/03/2009

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 01/13/2010

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 01/13/2010

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 01/13/2010
Date Data Arrived at EDR: 01/15/2010

RCRA-NonGen: RCRA - Non Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Data Release Frequency: No Update Planned

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

Date of Government Version: 12/31/2008

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 02/08/2010

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 12/31/2007
Date Data Arrived at EDR: 08/26/2009

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2009 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDRs professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. EDR Historical Topographic Map Report

Environmental Data Resources, Inc.s (EDR) Historical Topographic Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topographic Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the early 1900s.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

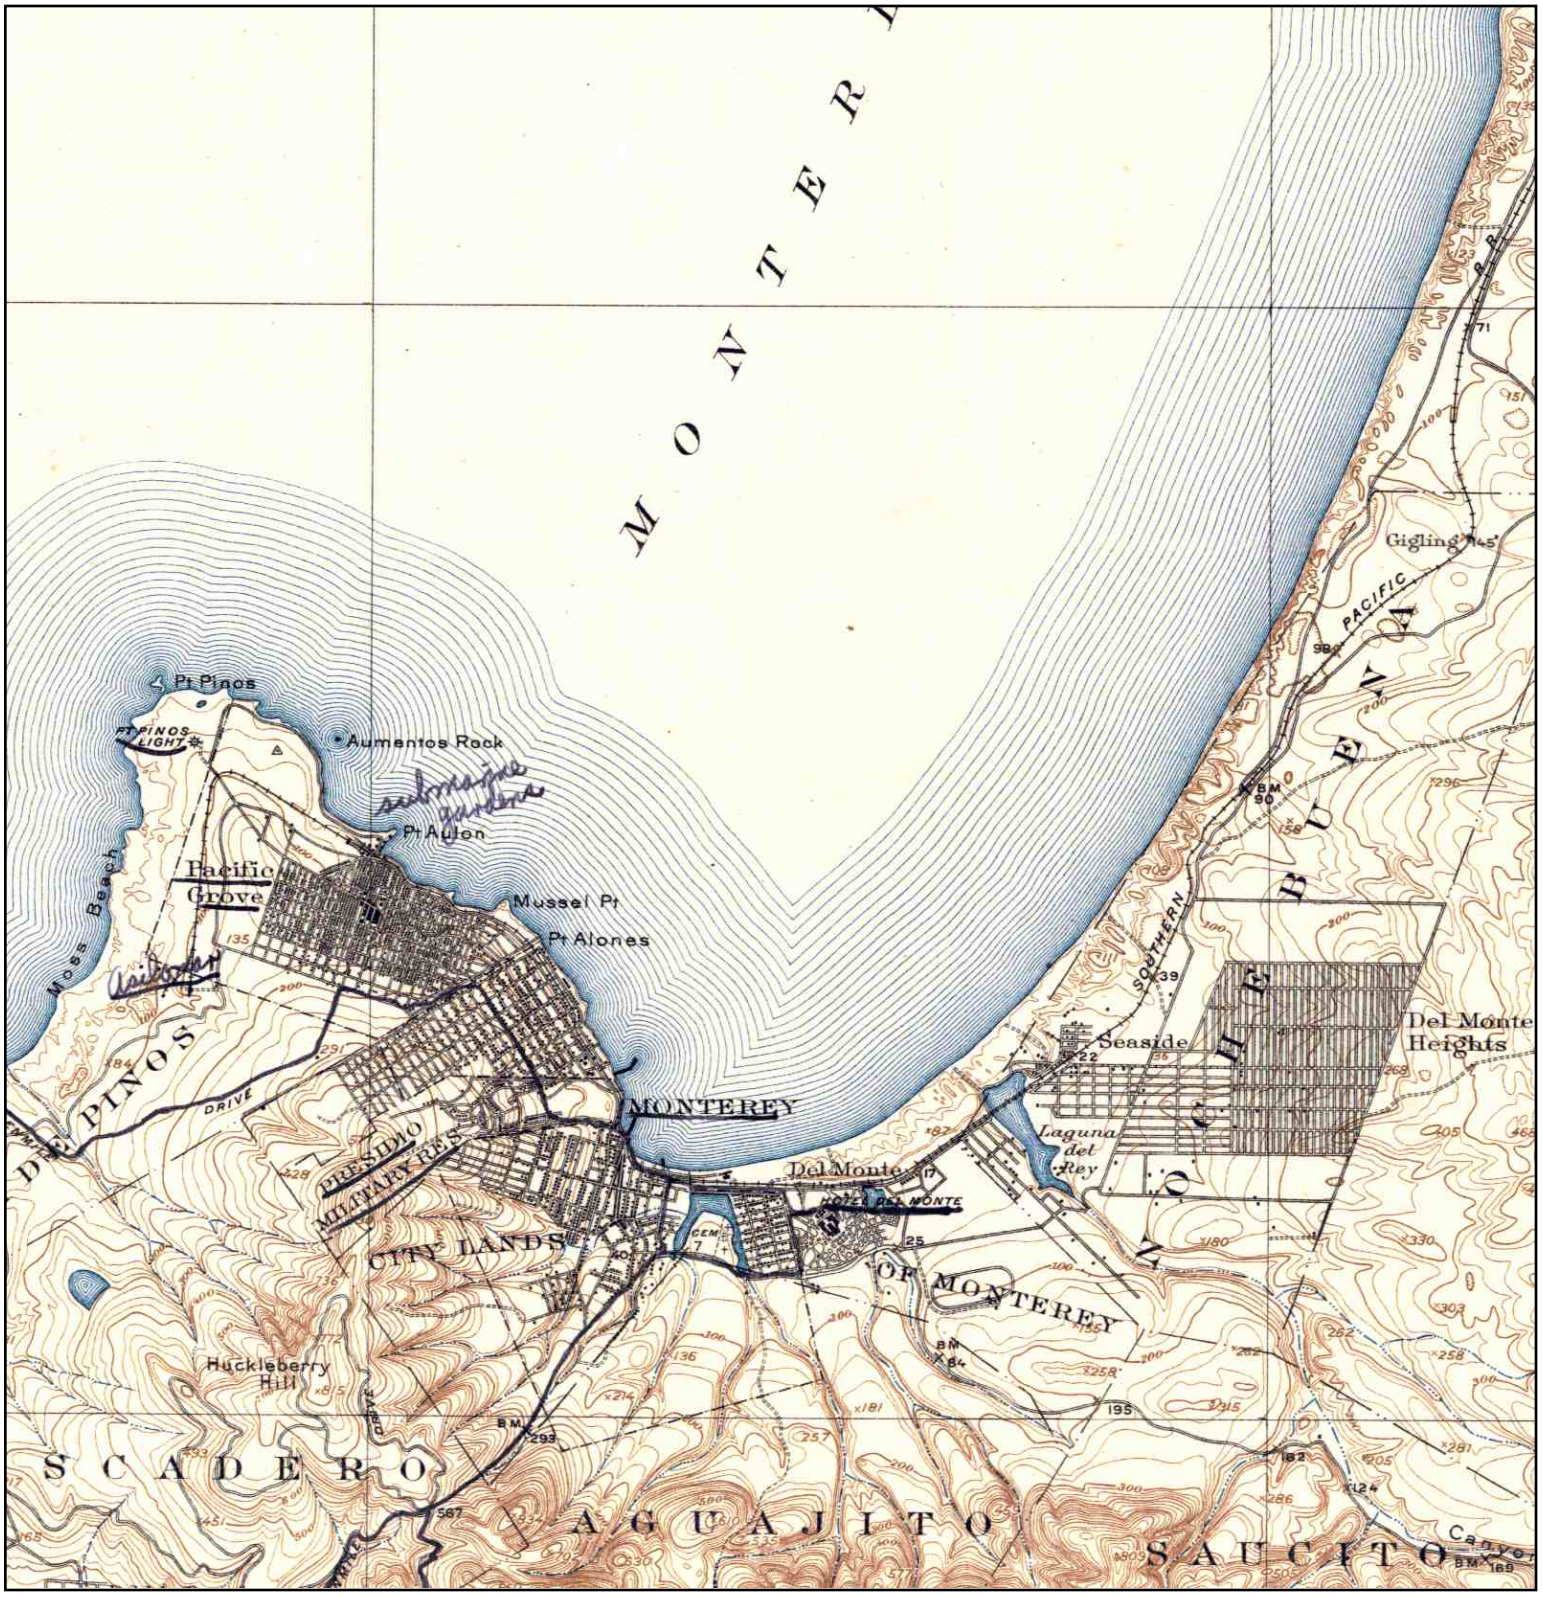

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. **NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT.** Purchaser accepts this Report AS IS. Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental professional can provide information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

The complete Sanborn Library collection has been searched by EDR, and fire insurance maps covering the target property location provided by Kleinfelder, Inc. were identified for the years listed below (selected maps only*). The certified Sanborn Library search results in this report can be authenticated by visiting www.edrnet.com/sanborn and entering the certification number. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by Sanborn Library LLC, the copyright holder for the collection.

Certified Sanborn Results:

Site Name: Monterey Peninsula Light Rail Project
Address: Monterey County
City, State, Zip: Seaside, CA 93955
Cross Street:
P.O. # na
Project: na
Certification # A197-46E1-887E

* Environmental Data Resources, Inc. has been instructed by Kleinfelder, Inc. to print ONLY the Sanborn Maps for the years listed below:

1962 (7)	1905 (5)
1956 (5)	1892 (2)
1949 (5)	1888 (2)
1943 (5)	1885 (1)
1926 (5)	
1912 (5)	

Total Maps: 42

Sanborn® Library search results
Certification # A197-46E1-887E

The Sanborn Library includes more than 1.2 million Sanborn fire insurance maps, which track historical property usage in approximately 12,000 American cities and towns. Collections searched:

- ☑ Library of Congress
- ☑ University Publications of America
- ☑ EDR Private Collection

The Sanborn Library LLC Since 1866™

Limited Permission To Make Copies

Kleinfelder, Inc. (the client) is permitted to make up to THREE photocopies of this Sanborn Map transmittal and each fire insurance map accompanying this report solely for the limited use of its customer. No one other than the client is authorized to make copies. Upon request made directly to an EDR Account Executive, the client may be permitted to make a limited number of additional photocopies. This permission is conditioned upon compliance by the client, its customer and their agents with EDR's copyright policy; a copy of which is available upon request.
